> I pull in about 120 postings daily. I guess most of us here do that, do you
> really expect me (us) to begin tinning and knewsing ? If that is the only

I don't expect anything from nobody, I'm just stating an opinion here. I've used various offline-readers under several OSes, and none of them can keep up with tin (which is what I use) when it comes to speed and functionality.

>>*Cough*... Teli works, but that's all. The good old BSD-telnet is still a
>>lot better. The telnet-clients for STiNG are not good though, most of them
>>have serious shortcomings in their terminal-emulators.
> BSD, who invited NetBSD to this discussion? I simply said that Teli works

Where did I say NetBSD? The old BSD-telnet has been compiled on almost any OS on the earth, MiNT included. It shouldn't be a problem to compile it for I-Connect either, but it would be rather pointless since there aren't any decent terminal-emulators for MagiC.

> Perhaps Geir had a lousy advisor? you do know that there is only a very

Why would he need an advisor, I though I-Connect was to easy to set up?

>>If you're used to the unix-way of setting up stuff, you'll probably find
>>flashy GUIs hard to use as well. NT is a good example of how horrible a
>>GUI can be to do such tasks.
> Give it up Jo, this discussion/topic has been here several times before.

> have been acceptable. I haven't been in touch with command shells and the
> like since say 1986. After 13 years, it's time to ditch the GUI, and return

And this is where your logic fails, you automatically assume that every Atari-user has the same background and preferences as yourself. What about the user that has used MiNT-Net since day #1? I can assure you, he will *not* be particularly impressed with I-Connect, STiNG or Draconis...

> back to the commandline/shell, just to be able to connect my Atari to an
> outside cable Ethernet?. The guys who turned MiNTNet into the monster it is

First of all, complain to ASH if your preferred stack doesn't support ethernet. Secondly, you can install and maintain a complete LAN based on MiNTnet without ever having to type one character on a command-line.

> today should be publicly crucified. it's about time the MiNT developers

Again, you reveal your total lack of knowledge about MiNT-Net.

> Linux is installed on more and more PC's, why ? Windows sucks all of a
> sudden? Perhaps it's because with every new release the installation and

Linux is more hyped than Windows has ever been, and if you look closely at it's use (and users) you'll see that it has a very tiny marketshare in the desktop-market. It's almost exclusively used by hackers.

> set up gets easier. The easier to install, the more people who will jump on
> the bandwagon. The MiNT developers should keep this in mind, before

You seem to miss the fact that MiNT != KGMD (or whatever), MiNT itself consists of one binary and one configuration-file. Somebody who can't even install that definitely deserves the title "complete idiot"... What you apparently want is a distribution like Redhat, but I wouldn't put that burden on the poor kernel-developers...

> I know MiNTnet is powerfull, and I am about to find out all about it real
> soon. In the meanwhile a stupid question: why did the programmers leave out
> a GEM-front and wizards? I'm convinced you're going to give me a very
> intelligent answer....

Because they (or *he* to be more precise) didn't want to? Because they wanted to make it the way it is? Because it's very easy and intuitive for anyone with unix-experience (and no, unix != command shell).

What you refer to as "MiNT-net" is actually several different things:

1. The socket-device itself.
2. The drivers (ethernet, slip, ppp, plip).
3. The tools used to set up this (ifconfig, route, iflink, pppd...)

MiNT-Net itself consists of (1) and (2), and there's really no problem to write something like IConf (but a bit more comprehensive) to replace (3). All you need is someone who has enough spare time and motivation to sit down and implement it. This tool would work with both the MiNT- and MagiC-version of the socket-device and drivers.

I know Bengy Collins has used CAB on his iMac under MagiCMac, as he found it runs very stable, plus he has one advantage - not getting those annoying popup ads that services like GeoCities throw up at you when accessing their web sites.

I'm personally wanting to get MagiCMac for my Quadra so I can run Newsie and Chatter, as I'm finding Mac newsreaders and IRC clients very wanting.

I could never get 3.12 to run at all, it crash immediately after it's
menubar shows up. This happens under both TOS and N.AES, regardless of
cache-settings. I have not tested it on my TT, as it doesn't have a modem
but have to access the internet through my LAN.

> This happens both under MagiC and under plain TOS (3.06). Should I go back
> to the Atari systemfont?

It has been said before - having an AES-font that's different from the
VDI-font is *bad* unless you only use clean programs. Proportional fonts
makes it even worse.

Again, hi!

Errrmmmm,

Well, actually I had to remove my nice AES font again and use the old Atari systemfont. Now at least everything shows up OK in Wensuite.

Behavior is still a long way from OK:

tried to d/l an all-newsgroups file: after a little more than 27000 came in, the d/l stopped. No list was displayed. I disconnected and looked into the NEWS dir: 2 files were there, one 830 kb, another around 100 kb.

Could do nothing with them, so I went back to fetch it another time. This time, after around 8000 items the loading stopped. I got a list but it wasn't long enough to reach comp.sys.atari.st, to which I wanted to subscribe. So gave it another try, but now it halted after 7000 items.

So I gave up subscribing to one single group.

How the email works: anyone has translated the docs for that? Can't figure it out.

Now back to the stack: appearently Wensuite every time adds a c/r plus a bellsign to my initstring "ATH", thus it won't connect. Calling up the configbox, deleting those two signs and I can connect again. Next time: same shit. No changes when I save the (corrected) file again, next time it's the same stuff.

Finally tried some more with the browser: it definitely won't load the graphics on my own page from the net. Next I tried the Okami site, but it rained complaints about a graphic that couldn't be displayed or something. The site itself never showed up. Jos, would you please remove all those tags and items that an older browser can't handle? Actually, I'm working with old CAB 2.5 myself and it doesn't complain at all... :-))))))

I think I've seen enough for now: let's just wait for Wensuite 125, perhaps.

Maybe my ISP is Wensuite-unfriendly, but it makes me wonder on what kinda hardware this stuff is being developed. Is a 10-year old TT that different/difficult?

Perhaps we DO need to yell for Alex to get back?

I always use Clorox Clean-up to get all the smoke and other stuff off my 'puter.

It very potent so make sure its well ventilated when you do it!
I usually just spray some in a little glass bowl and use Q-tips to get in those tight spots like the drive bezel and cd-rom tray.
Works quite well with keyboards too! BTW- I am a smoker so I know how that build up is!

Jo,

Give him a chance and time. In this case Alex just has a new project,
being iCab. I'm sure in time when he gets iCab where it is very stable
and that is going well, perhaps he'll see the continued support of CAB
on the Atari and throw in some mods at that point.

Sometimes a man likes to try something new.. sometimes a man likes to
visit his old stomping grounds. :)

Hi,

just a small test. I'm writing this using Wensuite 3.12b. Finally at last I
managed to subscribe to c.s.a.s and I could fetch something from the server.

Well, at least WS 3.12 connects, I can't get 3.20 to connect, it seems to
hang in the login procedure. Verified all the configs, settings, but it just
won't...

Now the browser isn't much to be used, here it loads no graphics from the
Net, it does from disk but shows them in weird colors, IF they show up, that
is. Moving GIF's don't move at all :-(

Can't seem to set a line wrapping right in here, so I have to keep an eye
on the line lenght manually.

Next let's see if this one gets out or not.

3231. IDE CD Rom.

Newsgroup: comp.sys.atari.st
Date: 1999-08-16 00:00:00 UTC
From: "Nicholas Bales (please edit email addressto reply)" <bales@online.TAKE.THIS.OUT.fr>
Message-ID: <37B7D05C.37DB3C4B@online.TAKE.THIS.OUT.fr>
Source record: 74564

Hi,

I've just got back from my holidays, went up north to have a look at the eclipse and visit Holland and Belgium.

Anyway, when I got back home, my brother in law gave me an old 4x IDE CD-Rom drive, just in case I could use it. Is there any neat way I can connect it to the Falcon (in it's original case). I guess I'll need a new IDE cable with master/slave connector with a 3.5" to 2.5" adapter for the HD. The thing is external connectivity. I'd like to wire up an external IDE connector and put the drive into an external case with it's own PSU. Is there a standard for external IDE connectors or should I just wire up a custom-cabled DB25 or whatever.

Also, what drivers are needed for a CD-ROM drive on an the IDE. Is it SPIN or MetaDos or what ? Where do I get them ?

I never actually covered this question in the Quick FAQ, because I never actually knew the answer(s), and never was really interested. So fire away, and I'll add it in the next update (yes, it is coming!).

I don't really need this, but if it can be done, I might as well use the drive on the Falcon rather than stick it in the PC.

>
> 1. Is there any upgrades that will allow more than 4 megs in
> a MegaSTE?

There is the Magnum board that will allow 8Mb, but the last I heard of
it, it was pretty expensive, and not worth the price IMHO.

> 2. Is TOS 2.06 the highest version one can use in the MSTE?

Yes.

> 3. Does one have to set any DIP switches or software settings to
> allow a DS external disk drive to work on a MSTE if you have a stock
> internal HIGH Density disk drive?

If the MegaSTE has an Ajax chip, and a 1.44M drive, then it should work
already. Changing dip switch 7 (I think) will only enable the "High
Density" option in the "Format Disk" dialog, but should not change
anything in regards to reading/writing HD disks.

> 4. Can one use newer type SCSI hard drives with the MegaSTE's internal
> SCSI board? What about CDROM and CDR SCSI devices, can these also be
> used with the internal SCSI board of the MSTE?

Yes, no problem, but you must disable parity check on the drive. There
is usually a jumper to do this.

> 5. Is there only one Chip that controls the internal and external
> floppy drives on the MSTE? What is the name of this chip or chips and
> where is it located?

Yes, it's the Ajax chip. No idea where it's located though.

Sure, neither IE5 or Netscape 4.6 implement it correctly,
but there will always be specs-purists who will balk that
our HTML 2.0/3.2 mix we use to design pages for CAB must
die and be replaced by the somewhat more stupid HTML 4.0,
which relegates all presentation cosmetics to CSS sheets.

Nice idea in theory, CSS, but on CAB, you get a page that
looks almost as lame as HTML 2.0 did, once all the nicies
are gone.

It will also work with a normal 1772-02-02, but it will probably not be
very reliable. You'll have to replace the original drive though.

>> 4. Can one use newer type SCSI hard drives with the MegaSTE's internal

Beware that the internal SCSI-adapter only supports one unit, and that
unit must have ID #0. It's possible to hack around this so you can use two
units (both with ID #0!), but I have not tried this so I don't know how
reliable and compatible this is.

Only the Strict DTD does that. CAB adheres quite closely to HTML 4.0
Transitional, which means it should be a while before that browser
becomes obsolete.

> Nice idea in theory, CSS, but on CAB, you get a page that

Properly written markup will allow browsers to take advantage of CSS,
while degrading gracefully for those that are not CSS-aware. It is
either that or using redirection to load the CSS version, especially
important if positioning layers are used.

>provide stable connections.
Are you asking me? You really want hell to break loose again?
Fine, hold on to your rockers:-)

Anyone here who has followed the development of CAB since day one, surely must have put a few question marks along the way.
I remember the early versions of CAB, a nice simple offline browser, with each update the program became more robust and new features were added. When version 1.5 arrived it was even possible to surf the net ***attention now***, someone wrote an OVL file for it and with STIK, STiNG wasn't here yet, online access became possible. It wasn't easy to setup, but who's complaining.
Then Mr.Claus suddenly sold the rights to ASH (I get a deja vu feeling here, am I the only one?) and CAB became commercial. Nobody complained about this in those days, CAB 2.0 offered frames, animated GIF's etc, it even came with a program to easily log on to your IP. Compared with STIK that is.
And then the music stopped.... twice a year an update was lounched, offering a better IConnect, some unnecessary modules, a new client etc... but CAB itself remained the same, no new features and the weaknesses stayed. While the years passed and browsers on the other platforms became ever more powerfull, CAB stayed the same. In february 1999 Mr.Claus announced iCAB, a browser for the Mac with all the features we always wanted.... BTW: the latest demo of iCAB shows no progress (Java, CCS and html are still not implemented).

Instead of crying for Mr.Claus to come back I say we should be glad we got rid of him that easy. Now the Mac platform is stuck with him. I wonder how long it's going to take before they realise this guy hasn't got the (I'm sticking my neck out here!!) capabilities to deliver the goods....
When he joined ASH, they bought the rights to an offline browser. ASH had to call in the help from other programmers, to get Mr.Claus his product running. During the three years he's been at ASH, I wonder what the hell he's being doing? counting his money, playing DOOM or programming iCAB? He certainly wasn't doing what any reasonable person would expect from a professional programmer: improving his product.

He has a moral obligation and perhaps even a legal one to support his product, it's like a knife. It works both ways. So now he's gone off to the Mac platform promising once again exiting features, that's what he's good at. Since he proven that he can't accomplish it on its own, he's now luring away Atari programmers to his iCAB company, hoping they can improve his baby. This makes me mad: I supported his product from day one, he ignored me the customer completely and now he's harming the whole Atari platform via a backdoor.

And you want me to feel good about this? You know how I feel about the subject, and let me assure you that my feelings concerning this topic haven't become milder the last couple of months.

You want a CAB 3.0? so do I, but I'm 100% sure that it will not be Mr.Claus who'll produce it. He just hasn't got it in him.

Cheers from Belgium
Dennis

You're right about the directory caching, there isn't any. I made a blooper
here, sorry.
That `wee bit more' is GEMScript support: Down and uploading folders, files in
folders etc... can be done very easy by means of a simple Script file.

>So it's nice that you have this attitude but you're praising I-Connect
>clients and bashing STiNG clients and (quote of an older message)
>
>DV>The last year I haven't tried a single STiNG client. Why should I?
>
>So you're doing exactly what you didn't like others to do...
There's a small difference. I have used both stacks and their respective
clients. Face it. At a certain moment one has to make a choice. I choose
IConnect. I can't install STiNG everytime a new update of a client is
released. The last year none of the STiNG clients have been improved
dramaticly, it's the old stuff with some bugs removed. When a truly new client
would arrive with promising features, I will have a look at it.

>Ahh, so that must have been the case with my ISP as STiNG performed far
>better. Actually now STiNG no longer works but I-Connect. Do you know some
>settings I can play with to get better transfer rates?
Yes without hesitation, if your transfer rates are lower then with STiNG then
IConnect is not set correctly. Mail me your config file, and I'll send you a
tuned version back.....take it from me you will be amazed...:-))

While on the subject, transferrate doesn't say it all.
When I used to log in to the Belgian ftp with aftp, transferrates were roughly
the same, but in the end IConnect always turned out to be a great deal faster.
With IConnect you get continuous transfer, with STiNG you get annoying stops
in between transfer, this happens while surfing also. All those small stops
together make quite a difference, that's where the 25% difference comes from
that I mentioned a couple of days ago.

Sorry Jan, that's it from me, all your other remarks have already been answered by other people. I couldn't have said it any better.

Cheers from Belgium

The virus killer not working has got nothing to do with the combo MagiC/Jinnee 2.1. It doesn't function under MagiC period. It never has and it probably never will. The author surely must have a special version of MagiC, since he claims it works on his setup. He's shouting this for over three years now, and refuses to get it right, another fine example of a guy sitting high on mountain looking down at all the idiots (us). Maybe he should join OXO Systems?

I bought the program when it was commercial, then it became freeware and now it is shareware.... make up your mind please Richard.

I don't know what has happen between Oxo and you, and it's not my business too but why for Heaven's sakes bring you your vendetta to this group? Why can't you leave then alone? Do you really want to bring then down or what?
After the desertion of mister Alexander Cl. the only hope for us, that is the Atarians, is Wensuite and LoA. Wensuite is progressing but you're so dazzled by your hate toward the Oxo people that you can't (or refuse to) see it.
Sure, there is still lots of work to do -expecially the dithering isn't not that good- but little by little they brings their product to a higher level. Only with the support of us Oxo can and will improve Wensuite.
All I can say of Wensuite is that it is, in regarding to Adamas, very stable and above all it supports true color which unfortunately can't be said of Adamas.
Now let use hope that Oxo (and MUCS) will decide to implement STiNG/MiNTnet support so we can use it alongside with our usual STiNG/MiNTnet setup. Once this has been done I'll buy their product.

This is not entirely correct - it's true that they've released a
socket-library for PureC, but this isn't enough to implement IConnect
itself on top of another stack. You have to know how the details of
IConnect itself, the socket-library hides all this nasty stuff.

It doesn't look like IConnect installs a device, so most likely it either
provides an API through a cookie with function-pointers (like STiNG) or it
hooks into the GEMDOS-vector. In both cases it should be quite possible to
write an overlay for STiNG and/or MiNTnet, but not without the specs.

> While on the subject, where can I find the STiNG specs?

You mean it's API? It's available in both the STiK- and STiNG-archives,
but I warn you, it's pretty scary stuff...

>>Because they (or *he* to be more precise) didn't want to? Because they

You misunderstand me; Kay probably didn't give a s**t about anybody else
than himself when he decided to just port the configuration-tools from
unix instead of writing a dedicated GEM-tool. It made (still makes) a lot
of sense, because back then MultiTOS didn't even exist, so most (if not
all) MiNT-user simply used a commandline-shell. It also makes it very easy
to just suck scripts and programs from the unix-world, which was precisely
Eric Smith's motivation to write MiNT in the first place. But I don't
think any of them means that this is the best way for everyone.

> If I understand this correctly, before even trying to install this OS, I
> better go visit the local library and return with a dozen books about unix,
> and wade my way through these....

I did it with minimal unix-experience, basically all I knew when I first
installed the TAF-kit five years ago or so was how to copy/move/delete
files... If you don't have any experience or knowledge of unix and then
try to install K[EG]MD, don't expect to understand everything the first
week. It's just the same with The Other OS, give a Linux-hacker a blank TT
and a bunch of disks with all your software and see how long it takes
before he's succeded in setting everything up and actually understand

what's going on under the hood...

>>MiNT-Net itself consists of (1) and (2), and there's really no problem to

Vasilis Papasomething (sorry, I'm totally unable to remember that long
sequence of characters...) is probably the right guy :-) He's the one
who's writing sockdev for MagiC, and IIRC he's working on the drivers now.

I vaguely remember that I managed to install WenSuite a year ago (or so),
but it never worked online.

> Nah, on second thoughts I just delete it.....

That's what I did, but it really is a pity as WenSuite actually looks
good. The last version I managed to start up also had a dialog where you
could choose which stack to use, a *very* nice feature :-) I mean,
MiNTnet, IConnect and Draconis all have socket-libraries which are very
similar (although the IConnect-lib only works with PureC), so it should be
fairly easy to support all of these. Peter R. promised a socket-lib for
STiNG too, this would have made things even easier.

Well, I have a very old version here (the disk is labeled "Douglas
Communications, 1993"), and it works if started in single-mode. I have
never treid newer versions, as I haven't had a virus on my Ataris since
'92...

Euch my Hades is a French one too then. It works here even under
N_AES/MiNT with Copy Cache on, at least offline. Quite some time ago I got
WS 3.12 working online on my Hades. Ask Jo Vandeweghe if you won't believe
me. Oh no, don't ask Jo. I forgot he hates Oxo so much he probably won't
tell you.

Hi

you should be able to run Cubase on either machine, although you need at
LEAST 1 meg and a hi-res monitor to use it on the ST.

Trying to compare machines is a little tricky, as the only thing they
have in common is they both use a Motorola CPU:) Effectively they are
different machines, someone will correct me if I'm wrong:)

>1985.

Hi Dennis,

actually, I'm using 3.20a again to reply and sending it off...

If you look at it more carefully, you'd see the menu option is greyed out...
Same with all the "external programs", there's nothing to do with these.

I tried the FTP section, it looks like it's working but it ain't... there's nothing I can do
with it. (note: this line wrapped automatically)

Funny: for 3.20a I had to remove one line from my script, which did the trick OK on 3.12b!

More funny: with exactly the same settings I get funny colors for pictures in html, whereas in 3.12 they showed up OK. (note: this line wouldn't wrap at all)

Editting in a message like this is a pain: delete all chars manually. No way to simply rubberband a dozen lines and remove them. (this line wouldn't wrap either)

Now while I'm typing, sometimes the wrap function works OK, another time it doesn't.

Even more funny: after the first time I read msgs in 3.12, I couldn't read them any longer unless I did a "reply-to"... (again no automatic wrap)

I transferred all the news files to 3.20 and it's OK now... in 3.20, not in 3.12 :-(

So far the mail stuff worked OK (except that I can't read in 3.12 unless I do the same trick
with "reply-to"...

The stack works OK. In this version however the modem commands get a C/R and bellsign in the initstring and hangupstring. Version 3.12 did it only to the initstring.
It happens as soon as you hit "connexion". Next you click the "disconnexion" thing, go to the modemcommands, remove the added chars and next you can connect and disconnect as many times you'd like. After a new programstart the same stuff happens again.

I just read in the docws that english and german versions are due in september. I surely hope so, since my French is rusty like hell!

OK, let's try to get it out!

Source record: 74592

Oh boy!

Well, this morning I was working WS 3.12, fetched some news and could read it. I also got some mail and could read it. Later I experienced I could no longer read new and mail articles....

This evening I worked with 3.20, which I got running.
At first I could read news and mail. Next I replied to Dennis, it was sent off and the next thing I can no longer read existing articles.
Thinking about it, the same happened this morning on 3.12... I had replied to something using WS and after that was sent off all the articles couln't be read any longer.

So now I'm stuck with two versions which both cannot read articles any longer. Any more experiences like this?

I have tried already deleting everything in the newsfolder, but then I need to get the allgroups again and start up again. Leaving the allgroup.idb and .xdb files results in a message that I can't fetch news.

The longer I work with this stuff, the more messy it seems to be. Got the browser working basically, one one version with wrong colors for the graphics and most moving graphics are not displayed or "still-displayed" but at least it's working. The FTP doesn't work at all. Now I thought I had the mailer and newsfetcher working, but as soon as one writes back it's all gone...
Apart from that, the mail/news editor is crappy too: read my previous msg written with WS (I wish I'd never done it but I think it managed to get out).
Right now I think OXO needs to pay the user for all the discomfort and I think FF 290 is just a laugh then...

Just adding one and one together: CAB: no more support/development. LoA: perhaps the best bet? (but still a long way to go). WS: eerrrrrrmmmm???

I think my plans to shift Internetting to a Linux-box isn't that bad :-)

Always appreciate constructive criticism like yours, dude.
UVK has always worked under Magic provided you keep the SHIFT keys pressed
during loading. It's the system status screen that goes wrong.
By the way, UVK was freeware until 1988, then commercial until early this
year. Now it is shareware. Get your facts right next time please.
This thing with the SHIFT keys is in the manual. Read it next time please.

Richard

Last Updated 08/16/99
- Sold items removed

Thank you to everybody who has sent us offers, as you can see, we have sold
off a few peices, but still have lots to go. I have received about 80 email
in regards to the ST hardware, but very honestly I haven't had a chance to
go through them all yet (at least not carefully). I will try an do so by
this upcoming weekend.

I will continue to update this post as we go through the rest of the
equipment or sell items off. Please see the original post for the story
behind all this equipment. I have incorporated all the new equipment into
my regular style of post and added in some of the items that I/we already
had laying around. All the Atari equipment has been tested and appears to
work fine, however the IBM development tools and hardware has not. We have
no reason to believe that it won't function properly as the majority of all
of the added equipment is in very good shape and boxed. If you have any
questions please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For
items that I am taking offers on (no price listed), please make all offers
in U.S. funds. I am also willing to trade for certain items, please see my
list at the end of this post. Please note that I am in Western Canada, so
shipping to the US will be slightly more expensive on larger items (however
if you are in the US, you have the exchange rate on your side).

If you are interested in any of these items, please respond to Jim at
classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email
me if you would like a current listing of items I have for other systems
(Colecovision, Intellivision, Classic Computer or Handheld games) sent to
you, please specify system.

**Hardware** Please make an offer

- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========

I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

>about script files.

It might be that Bob needs to activate the "Terminal" option and interact manually with the login if Zetnet doesn't use a scriptless login. Someone at our club uses IConnect with Zetnet, and if my brief look over his shoulder was a guide it looked like one did need such a script.

In any case it should be straightforward enough to transfer STinG's waitfor/respond sequence to IConf.

>Cross your fingers and start IConnect, after something like 15 to 30
>seconds a dialogbox should pop up telling you that you're connected...:-)
>
>Yes, that's all there is to it folks. We are talking IConnect here not
>STinG, right?

There are plenty of advantages to using IConnect with it's only downside being that it isn't capable of asking the ISP for a DNS as StinG 1.20 is.

I'm confused by the manual tho', which instructs that one is to determine the numeric addresses for the various servers with the get_ip prog and plug them into IConf, however this doesn't seem to be a requirement at all, the names alone are fine.

There's fiffi (FTP client supplied on the CAB2.5 master disk) and Teli,
telnet client, shareware.

Look on Bengy's site for links and Englsih RSC files.

steve brockelsby a ï¿½crit :
>
> what is the main diff between an st of a falcon,

Lots!

The ST is a 68000-based machine running at 8Mhz (16 on Mega STE). Video modes are limited to the low, medium and high resolutions. Depending on the machine, it has a max of 4Mb, no internal HD, and no audio input (nice audio output on STE). A Falcon is 030-based at 16MHz, VGA display with lots of different video modes, up to 14Mb of RAM, a complete audio matrix including DSP, SCSI and IDE capabilities, etc...

> can i run cubase on both machines?

Yes, but this depends on versions. An ST can run Cubase 2.0 to 3.0, but will not run Cubase Audio (actually, it might, but will not use the audio features). A Falcon can run Cubase 3.0 and Cubase Audio.

Basically a 1040ST is perfectly ok for MIDI. If you want MIDI+audio sequencing, then you need a Falcon.

> please email me

No, please read the newsgroups you post to.

Yes, because the french can actually buy it. I think there is a big misunderstanding with the *update* files that are distributed on the net. Lots of people are complaining that they can't connect and just say it doesn't work. Of course it doesn't if you are not a registered user.

At the moment OXO are committing to support the french market only, which is a mistake IMO. The good side of this is that people who have bought the package actually do get support. OXO even tries connecting to their provider and stuff like that.

I actually offered to translate WS for them, but they said they were not interested yet as they feel they do not have the resources to support international markets. Once the product is stable enough they probably will consider it, but with updates coming out every 2 or 3 weeks, I can understand they are reluctant to maintain multilingual RSCs.

> >I think that Atari produced
> >a special kind of ST, TT & Falcon for use in France only. Perhaps we
> >should all get a French Atari to get this thing running?

Erm... I don't think so. The only differences are the keyboards, TOS languages (which also goes for the UK/US/German/dutch/etc..) and the lack of RF Modulators on french machines (all TV's here have SCART since 1981).

I have the feeling that the compatibility problems that they do have come from the fact that they are developing WS on MagicMac and from some of the GEM libs they are using. I definitely wouldn't consider MagicMac as being a reference Atari platform for beta testing.

I've also tried to use my Ataris as terminal and it works fine. Now I have a PPP connection, using STinG and the serial port (I know it's slow). My Atari is a Web server, a FTP client, or wathever I want :) So, as it has a TCP/IP stack, it could be a X terminal, right ? The problem is to know if a stand alone program exist (server) to display a program running on my PC. Maybe I should install Linux again on my Falcon and start with a window manager at boot time. I'll probably try this as soon as I find a hard disk to put linux on.
I'm also thinking of an old PC (486), but I already have 4 computers (PC linux + F030 + ST + 286) !
Thanks for you answer.

Hi Krzysztof

No, I've not NAT program (Network Address Translation, or IP
masquerading) for Windows, but maybe it exists...
Sorry for the wrong URL. It is
http://perso.club-internet.fr/agaymard/network_e.html

Anyway, you can do NAT with STinG rather than with Windows !

>it doesn't work. Of course it doesn't if you are not a registered user.

Hi Nick,

well, first of, I've got a key here, so I'm using the normal version.
You probably read my previous messages.
Connecting isn't the problem. Yes, somehow the modemcommands are messed up
by adding a C/R and bellsign to several strings, and you first have to
remove these, but then you connect without problems. Speed = fine.

My major concern is the following: it's unstable. Yes, that's on MagiC and
on TOS. Haven't tried it on Mint/NAES. Now apart from the browser
shortcomings and the FTP client NOT working, it has a mailclient and a
newsclient.
These are OK. Until I wrote back to a message and sent it out. After that
all the news and mail is no longer readable... I solved the problem by
removing all the existing files in the MAIL and NEWS dirs, fetching a new
allgroups file and replacing the CTX file with the original one as it
comes with the program. So this morning I set it up again and now it works
again. God bewares me for writing and sending with this client again.
The mailclient kills all mail on the server once you fetched it. I'd like
to see an option added to either leave mail on the server or kill it.
The editor is a pain-in-the-neck. Sometimes it wraps automatically, mostly
it doesn't. As soon as the cursor moves out of the window, this starts
flashing constantly. Get the cursor back with "backspace", issue a C/R and
you can proceed. Removing 15 lines of quoted text is just a laugh.

>At the moment OXO are committing to support the french market only,
>which is a mistake IMO. The good side of this is that people who have

The "welcome.htm" talks about English and German versions becoming
available in September...

The way I see this: it ain't at all, based on the experiences I'm having running it on a TT with either TOS 3.06 or MagiC 5.01...

For the time being I've experienced enough. My preliminary conclusion: it's called 3.20a, but unusable. For a 290 FF program: don't spend your money on it. I think for the somany times 290 FF they must have received by now, they should buy a secondhand TT and start doing their homework again! Period. Next please...

Source record: 74610
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,alt.atari

Hi

Atari.org are having problems at the present and aren't able to redirect email AND web addresses. So if you send any mail to an address that ends 'atari.org' it may come back.

The web site addresses have the same problem, BUT if you go to www.atari.org and go to the sub-domain list you will be able to get to the site.

While the services are down, why not reply to this thread if you want to get in touch with someone who has an atari.org email address.

Just a simple message like the following, mine is an example:

steve@atari.org

please drop a line.

your.own@email address here (if different from the header OR it's another atari.org one)

I little crude but effective!!! but only an idea.

Derryck

Thanks for the info.

I followed Dennis's 'simple approach' advice. Nowhere! I then copied out
the wait/reply/wait/reply sequence in dial.scr. Still nothing.

Dialed up Zetnet manually using Connect (the terminal program), got
connected, but they stated asking me for id's etc. Flashed my user name
etc at them, but they disconnected me. What is puzzeling is that the
first string that dial.scr looks for is a code type staring with * and
this did not come from them manually. Perhaps Sting is sending them some
hidden data?

Can you get some info from you club mate.

Bob-King

Yes. Can't you use an external editor? The older versions allowed that.

> > >At the moment OXO are committing to support the french market only,

Well, I wouldn't trust that welcome.htm file (it doesn't even say that
the copy you have downloaded in an update and that you cannot connect
without a key), and I also wouldn't trust any Atari company when it
comes to deadlines.

I'm afraid I have to agree with you there. I think WS has the potential
to become a very good product. It is fast, and has some internal
multitasking capabilities even under SingleTos, which is very neat, and
they are pretty supportive, at least on fr.comp.sys.atari. On the other
hand, there are some design choices that I just cannot agree with: lack
of international support, no STinG interface, and the development
platform which is hardly standard. There is still progress to be made,
and the fact that they do not want to support it internationally is
recognition that even they don't feel it is a mature product yet.

All I can suggest is what OXO suggests when problems like yours come up
on f.c.s.a, mail them directly.

Hi Jo Even. Well, I've UVK 2000 here, that I bought commercial from SFT just before it was released publicly, and it works fine under my MiNT-Falcon setup. It always finds some program in memory that it labels "unknown app at memory location xxx" but other than that it seems to work just fine. Like you, its been a very long time since I've seen an Atari virus. In fact, I think it was the Ghost virus (mouse moves the opposite direction) on my STe years ago.

Its so funny at work on the new network (Wintel NT's) reading the MS-Outlook E-mails. Fully half are virus warnings... ;-)

I can't remember off the top of my head, but it should be in the
serial.cpx or in the dialer configuration screens. Editing the dial.scr
by hand is pointless since the last few versions of STinG.

However, don't forget that whatever the speed of modem, a plain ST
cannot go faster than 19.6Kbps, which usually translates to a 14.4Kbps
connection. Could you be more specific on your setup ?

It's been a while since I installed this on my TT now, so I really can't remember exactly what I did to get decent transfer-rates. IIRC I just made sure that the configuration was consistent with my MiNT-Net setup...

Btw. Geir Vï¿½lidalo just told me today that IConnect got more stable after he fiddled with the timeslice-settings in MagiC. I don't know what he set it too, but it might be worth a try.

3284. Installing SPIN!

Newsgroup: comp.sys.atari.st
Date: 1999-08-17 00:00:00 UTC
From: tesla1@zetnet.co.uk
Message-ID: <7pc6oc$2ck$1@news5.svr.pol.co.uk>
Source record: 74617

Hi All,

I seem to be having problems installing Spin!
I place all the files into the the Auto folder as described but I
can't get it to load the BOS file.
The error I get is 'driver not found' 'device not reconised'
How can I edit the config.sys file so it reconises that my CDROM drive
is ID=5 and th Drive letter is P?

My system is an Atari STE running MagiC 6

Thanks in advance,

Gordy.

Do you use the MagiC driver?
Don't forget to put the spinmagc.xfs file into the magic folder 'extensions'

Hi ,

I know that this question has been asked before , but I can't seem to find much info about it. What is the best way to connect a Falcon to an ST , for basic file transfer.

My ST has an external 40mb Gastenier HD with a ASCI lead. And the Falcon has an internal 310mb HD.

I know that there is a page devoted so such comms issues by some dude called 'pera' but I've mislaid the address.

Any help on either would be excellent.

many thanks

cheers

Paul Mac

Yes, I remember getting it working at some time or other (on a TT). IIRC,
the clue to getting it working on-line was to load HSSERIAL (??) rather than
the HSMODEM which I normally use.

>Yes I did. You're probably one of the only non-french users right now.

Hi Nick,

maybe so. But are all those french users using Macs with MagicMac?

>The FTP client is not implemented yet from what I've understood.

Obviously. However the menu item isn't greyed out and can be called up.
I've seen the Telnet, IRC, HTM editor and Print menu's too, but all greyed
out.
I've been staring at this FTP window for about 5 minutes, finding out I
could read my disks/dirs but nothing else. In the end I could find no way
to select a server, so that's where I figured the feature isn't
implemented yet.

Same with the "visualiseurs": the option is there, but doesn't work.

>Yes. Can't you use an external editor? The older versions allowed that.

Not this one (unless it's in the "visualiseurs-menu"). OTOH, there is
another menu "Edition" with all functions like copy, cut, paste, undo,
mark, search etc. This too is greyed out, so I figure that's another
future job for the editor.

I recall having had a look at WS 2.somuch, quite some time ago. I could do
nothing with it and the browser didn't look very much appealing.
This one looks a lot better. For a program with version number 3.somuch I
expect better functionality. Don't give a shit when the FTP, Telnet or IRC
clients haven't been implemented. The implemented ones should work. I
haven't located where exactly it happens, after finishing/writing a
message or after the transfer, but it leads to the existing messages
becoming unreadable the normal way. One can read them afterwards by
replying to them and after reading, canceling the operation. But in fact
the only *decent* operating part is the TCP/IP stack. It may also be
responsible for kicking in those C/R's and bellsigns in some of my
modemcommands, but basically it works fine.

This is no app for FF 290... I guess we're not waiting for "another MS OS"
which is sold commercially and with every update some bugs have been
removed and more added...

Source record: 74627

Hi Richard,

Boy it takes a programmer to come up and implement the "double shift"
function...

That's what I like about USEnet, don't put vital information like this in
the manual, if the idiots out there can't figure it out themselves, give
them a hint in the newsgroups, nice peace of work...

There's still trouble in paradise though: booting the program with both
shift keys starts the program indeed..... for exactly 12 seconds, then
the program gives an exeption error 69, and it's back to the desktop :-(

I used to be a fast and flashy guy when I was younger, but now I need at
least 13 seconds to check a single disk. On second thoughts: could you
make that 14 seconds please? Old age might slow me even more.

So I'm afraid it's back to the drawingboard for you Richard, while your
at it, correct some spelling mistakes in the Dutch version, and please
add a touch of colour to these boring dialogue boxes.

Cheers from Belgium
Dennis

That's what I ment, with not implemented, I have noticed that a lot of options are not "implemented yet". I bet they overlooked this, how can one explain it otherwise? supposing you're lucky and have surfed to a site without the program returning to the desktop, and you would like to have a printout of it, because saving the html page to disk is not "implemented" either, come to think of it there is a whole lot greyed out. I had a look in the RSC file, there aren't any dialogue boxes present for the greyed out options.

It has a certain touch :-))

I haven't tried this yet, but perhaps one could make a screenshot of his mails & postings? Like I wrote, this program is fun, it challenges the user up to the very limit :-)

>I just read in the docws that english and german versions are due in
>september. I surely hope so, since my French is rusty like hell!
Don't put your hopes up to high, there's absolutely nothing in those docs that will help you (us) a single step forward.

On a more serious note though: If OXO Systems persists in bringing out a complete suite (stack, browser and clients) I think they will never ever get it straightened out. They better should put all their efforts and abilities in the browser, that's what we want after all, a nice new fast browser, who's waiting here for the next newsreader or mailing prog

anyway?

Cheers from Belgium
Dennis

Hi Dennis,

disagree... :-) Version 3.12b shows the browser graphics in right colors, version 3.20a doesn't. Also version 3.12b only adds a C/R plus bellsign to my initstring ATH, whereas 3.20a adds them to the initstring and hangupstring. And finally, where 3.12b connected to my ISP using the same script I'm using for Sting, Mintnet, Linux ppp and Draconis, for version 3.20 I needed to remove the last line "wait for HELLO"...

Dennis, it took several tries here too. On one occasion it got in around 8000 groups, I figure around 5 short of comp.sys.atari.st :-)
But it just stopped there, it didn't crash. I noticed that the counter moves up till 32768, after that it counts back :-))) My ISP provides me with around 34.000 groups...

>user up to the very limit :-)

Actually, I had planned to do so for the review in the next ST magazine. Now that the article is more like a bunch of criticism I was thinking of refraining from screenshots, mainly because the program is a no-go. I can do some shots however and send them private if you want...

>On a more serious note though: If OXO Systems persists in bringing out a

>anyway?

Well, look at it from their point of view: they wanted it on their own TCP/IP stack, thus there need to be several clients for that one. But I agree, let them finish (I mean FINISH) the browser first, then the mailer/newsreader PLUS the editor, and finally add subsequently the other clients. In fact, except for the stack, nothing works decent now. Apart from the shortcomings in the browser that I already mentioned, it's also pretty unforgivable at certain tags. I can't define anchors with a space

char in the ident, this is no problem at all with IE or CAB. Also, looking at my own page (which btw was checked in the HTML-doctor and brought up to the max standard), it looks like shit in WS.

>for the latest news on this and IFusion, a gluestik workalike for allowing
>the use of STinG and Draconis clients with an IConnect connection (this
>latter also still in beta).

Which sounds a little like bowing to the inevitable: if they'd made the thing STiK-compatible to start with things would have been a lot simpler and support for Iconnect would have been there from day one, with two or three clients each for most of the standard services (telnet, ftp, mail, news, IRC etc). Considering that there is a shrinking supply of programmers for the platform, reinventing the wheel seems to be a foolish waste of resources. Don't get me wrong: I'm glad more programs are being made available for Iconnect (the more the merrier), but if they'd stuck with STiK-compatibility those programs would also have a bigger potential market as they could be used more widely, surely a consideration in these times.

Hi Jo,

Jo Vandeweghe wrote in message <37B481EA.98C458EF@ping.be>...

>Atari users are they so intelligent to spend so much time on
>configuration files
>?

Actually, a well-commented configuration file can be a great improvement in terms of ease of setting up compared to a confusing GUI (NB "confusing" - a good GUI should be easy to use too). For instance, I found setting up STiK and STinG a doddle compared to Iconnect setup's scripting section which is much more confusing (to me at least). Most of the setup problems I encountered in the move from STiK to STinG (and there weren't many) were due to not reading the manual properly and were easily fixed. IConnect isn't currently working here (it was once, then stopped working and I gave up), STinG is. 'Nuff said...

Maybe I'm just weird?

The list I mentioned, unrelated to browserwatch.com, isn't based on
server logs. It's an Oxford-like attempt to list every browser.

But no mention of Atari.

Hi Gary,

yup, since I switched to Okami, I'm using both. No whishes, they run
perfect, automated by means of Spawner and I wouldn't like to miss them
all.

>2. What bug fixes, new features would you like to see in these (or any of
my
>programs)?

Found no bugs and like I said: can't think of new features myself really.

I can only say: tks a lot for these great little programs!

3309. Replacing STFM Floppy Drive?

Newsgroup: comp.sys.atari.st
Date: 1999-08-18 00:00:00 UTC
From: Chris Worthington <C.Worthington@REMOVEftel.co.uk>
Message-ID: <37BA8BA5.4171@REMOVEftel.co.uk>
Source record: 74498

Hi,

My ancient 520STFM (1989 rainbow TOS) died a few years ago, and I'd really like to get it up and running again (I feel the need to play Megalomania...).

The ST was teetering on the brink for quite a while, and would randomly bring up disk errors ('No disk in drive'), and eventually it reached the stage where it would refuse to ever recognise there was a disk present in the drive. All this leads me to assume that the floppy drive is knackered, and that replacing it might get the ST up and running again. I even tried putting an old PC floppy drive in (ok, but it might have worked...)

So my question is, is it liekly to be the floppy drive, and if it is, can I get hold of a replacement (direct from Sony?)?

Any thoughts?

Thanks in advance,
Chris

There are 2 common causes for the above symptoms:
- Bad PSU
- Bad Drive

In both cases, the only practical remedy is to replace the faulty component. A good source for a PSU is an old Atari, but you have the risk of getting another dead one. You can get replacement parts from most Atari dealers.

For the floppy drive, you can use a standard PC floppy drive, but you have to perform a few changes on it. These are described in the Quick FAQ. My STE is happily running a modified Mitsumi drive (which is what most OEM PC's use nowadays)

> So my question is, is it liekly to be the floppy drive, and if it is,
> can I get hold of a replacement (direct from Sony?)?

I don't think Sony drives were used inside the Atari. All of mine always had Epson drives. Anyway, any modern PC floppy drive can be used, the difference being in how easy it is to modify it.

Can any of the following read .PNG-files?
- Wen.Suite
- Light of Adamas
- CAB
- Newsie
- Lynx (sorry, just joking :-)...)

Just to know if I can use this format on my Web page instead of GIF
(for static images)...
But perhaps only a few non-Atari browsers support it?

Hi everyone,

Just a quick note to let subscribers know copies of AC#14 have been dispatched to all UK direct addresses with bulk supplies to overseas distributors en-route.

Apologies for the extended delay releasing this issue, we're now hard at work on AC#15 and AC#16, which will be our final "millenium" issue.

3314. [HELP] PC-Speed installation instructions

Newsgroup: comp.sys.atari.st
Date: 1999-08-18 00:00:00 UTC
From: french-lines@usa.net
Message-ID: <7pethg$b0l$1@nnrp1.deja.com>
Source record: 74503

Hi,

Many years ago, I acquired a "PC-Speed" hardware device from SACK Electronic GmbH, which would plug over the 68000 CPU of an ATARI STe, and give access to DOS based programs.

In fact, I never went on to installing the device, (probably because I didn't want to void the ATARI's warranty), and the box laid in the back of a drawer for many years. Finally, I have decided to give it a go. I have all that is necessary (the board, the software) except the installation leaflet which presumably explains the hardware installation procedure (in particular, which way round you should install the board). My board is specifically for STe's (square type CPU).

So, if anyone has experience with this, and has kept the installation leaflet, I would be very grateful if you could send a copy (either scanned leaflet, or just the instructions).

Thanks in advance,

Patrick

Hi Joe! I have to ask this, and I hope its sincerely *wrong*, but is
AC shutting down after issue #16? I'm asking because it was mentioned
on the ST+Fanzine mailing list that someone thought you were, after
reading issue #14...

Maybe they misinterpreted your "final millenium issue" statement?

I'm hoping! ;-)

Hi,

this thread seems to continue for some time.

Remember I wrote that on several occasions I could no longer read mail/msgs in WS any longer?

Found out that the Wensuite.ctx file gets messed up. All the lines are there but the order has changed somehow.

I just changed a few settings for my newsreader window (different font) and saved the inf file, next I got this new font but couldn't read again. I made a backup copy of the last .ctx file and started comparing and found that several lines had moved to different positions...

It also happens when you manually change the inf file and on the next start the ctx file appears to have changed too...

So for the folks still experimenting with WS (are there really?): keep a copy of the ctx file as long as it's working, and update it regularly with an OK file. As soon as messages won't display regularly, replace the current ctx file with the back-up one! At least over here that does the trick.

Thats not my experience. I have only 4 x 0 where the DNS number is required.
I get a new number every time I logon. It is a Dynamic Name Server isn`t it?
I`m using I-Conn v. 1.7.

>:>I'm confused by the manual tho', which instructs that one is to determine the
>:>numeric addresses for the various servers with the get_ip prog and plug them
>:>into IConf, however this doesn't seem to be a requirement at all, the names
>:>alone are fine.

The same here. Only the names of the postserver and the newsserver is required.

I started with STik a long time ago. When my IP finally stopped supporting SLIP, I
got I-Conn. I simply moved the differend values from the STik.CFG files to the I-Conn
setup prg. And it worked after 4 tests. Guess I was lucky!

At the same time I got MagiC 5.1 and NVDI, and what a surprise. I almost never go back
to the old setup (single TOS) again! Only TechnoBox CAD didn`t like MagiC, but I can
live with that.

cheers

Here you touch a tender point.

I have seen the specs of PNG. An awfull lot of things are possible in
that format. (48 bits color, gamma, alpha-channel, compression
schemes etc) Only making a module for CAB that simply sets a PNG on
the screen is a lot of work.

But maybe the makers of PNG have a library of C functions to help
programmers?

When things started we only had programs. Later on we became
applications.
Then there was mayhem. Everything is a program.

So we were told: .prg only for programs to run in the auto-folder.
(put a .ttp in the auto-folder and it will not run.)
In principle (GEM is not here yet) a program (.prg) in the auto
folder is a ttp program: no graphic output and mouse-use (forget
XBoot for the moment) only characters on a so called VT52 screen and
simple keyboard input with echo.

So app becomes the extension for things a user clicks active on his
desktop and that uses GEM (windows, mouse).

Now with multitasking it is nice to give parameters to an applicaton
when you start it just like you can (mostly must) do with a ttp.

So we have now GTP Gem Take Parameters applications.

And what about the extension .TOS? Anybody?

And the very seldom found .img (loadable executable code) not to be
confused with the pictureformat .img?

Met vriendelijke groet,
Ronald van der Kamp

I need both PopWatch and NewWatch in combination with Okami
so I would certainly like the support be continued...

What I would like to see - but maybe I haven't understood your programme
fully - is not getting all the news from all the newsgroups I'm interested in.

In NEWSie I can see indices first before I have the messages be sent to me...

greetings, Rein

Implementing PNG inlines isn't a good idea right now. Not just because Atari browsers don't support the format but most browsers in general don't either. On the Mac, for instance, Netscape has limited PNG support but Explorer has none.

Externally linked PNGs, on the other hand, are OK to use even on the Atari, which has available a number of helper programs that work alongside CAB (my favorite is GrafTool).

BTW, if you're interested in making your HTML more or less CAB-friendly, especially if you don't have the browser itself, check out the URL below. It's a comparison chart using flavors of HTML 4 as a reference to CAB's support:

Hello there:

I'm looking for a MegaST keyboard.

(these are the ones that connect via a telephone cable)

Any hints, offers, etc.. are greatly appreciated.

Thanks!

Frank Rothkamm, Hollywood, Calif.

Source record: 74521

Hi Dennis!

DV>Praise the lord my son for giving us IConnect, otherwise you would
DV>have been offline.

Yes, you all should be very happy about this.;-)
But anyway no reason not to point out things that aren't all that good with
I-Connect and/or its' clients.

DV>You're right about the directory caching, there isn't any.
DV>I made a blooper here, sorry. That `wee bit more' is GEMScript
DV>support: Down and uploading folders, files in folders etc... can be
DV>done very easy by means of a simple Script file.

So you would learn GEMScript and write a script just to have this feature? In
addition probably buy ASH Scripter? I expect this feature to be build in like
in aFTP.

DV>There's
DV>a small difference. I have used both stacks and their respective
DV>clients. Face it. At a certain moment one has to make a choice. I
DV>choose IConnect. I can't install STiNG everytime a new update of a
DV>client is released.

You don't have to. To quote you again:

DV>I've mentioned this here before: ICONNECT and STING can be installed
DV>at the same time.

So just switch over to STiNG and test the clients.

DV>The last year none of the STiNG clients have been
DV>improved dramaticly, it's the old stuff with some bugs removed.

That can't be said in general, besides bug fixes there are always new features
that are being added. The interfaces might not look as nice as the I-Connect
pendants but they are often as feature packed when not even offer some neat
functions the other I-Connect clients are lacking.

DV>Yes
DV>without hesitation, if your transfer rates are lower then with STiNG
DV>then IConnect is not set correctly. Mail me your config file, and I'll
DV>send you a tuned version back.....take it from me you will be
DV>amazed...:-))

Ok, I'll take this offer.:-)

DV>With IConnect you get continuous transfer, with STiNG you get
DV>annoying stops in between transfer, this happens while surfing also.

Probably just a case of which ISP you use as well or net traffic as I can see 'annoying stops' with both STiNG and I-Connect but also with PCs or Macs connected to the net.

DV>Sorry Jan, that's it from me, all your other remarks have already been
DV>answered by other people. I couldn't have said it any better.

No need to be sorry.:-)

Regards,
Jan

Noooooo!!!!!!!

What's up with that? I was just thinking to myself how cool it was
that Atari still has a really cool magazine, (I like to collect
magazines of Atari nature.. fun to read the ongoing history of the Atari
platform).
Well, maybe I'll later mention how wonderful it has been having ATARI
COMPUTING there.. and how it drew me into being an Atari user in 1998...

But honestly... Joe... why quit now?

Hi Gordy,

G>I place all the files into the the Auto folder as described but I can't
G>get it to load the BOS file.
although most of the people put all into theri AUTO folder it's not
necessary at all. Following I' ll give you my CONFIG.SYS adding my CD
ROM on SCSI ID 4 as drive Z: to my system. That should give you all
information you'll need to set up yours as P: on ID 5:

```
==================================zip=========================================
; CD-Tool BEGIN
; Note that everything up to `; CD-Tool END' will be erased by
; CD-Tool's configuration tool!
;
; created by CD-Tool 2.14, Sat Mar 29 22:39:42 1997
;
; devices
;
; SCSI 4: `TOSHIBA CD-ROM XM-3401TA' -> A
;
; BOS drivers
;
;*BOS, c:\metados\hs-cdrom.bos, A:12
*BOS, c:\metados\spin_sd.bos, A:12
;
; DOS drivers
;
*DOS, c:\metados\hs-iso.dos -c256, Z:A
;
; CD-Tool END

==================================zip=========================================
```

Regards, Peter

Please note that 12=8+4 whereas 8 is the number of possible ACSI
drives. So you will have to put a 13 where I put a 12, and a 'P' where
I put a 'Z'. -c256 has something to do with 'cache', I guess.

ps

Needless to say that PC drives DO work in STs but the connector has to be
flipped over to match pin 1 to pin 1

this is annoying but a fact of life, at least for an atari owner.

Also check your cable connection and connectors for discontinuity as it
sounds as if yur problem was at first interittant.

Good luck,

James Burr

Source record: 74639

Hi there,

esc wrote:
>
> I would love to try this out.
> What software or drivers do I need on the mac and the falcon to make
> the Lan ports work?

On the Mac you need a suitable comms program (I use Z Term), and on the Falcon you need HS-modem and a comms program (Connect is my choice/recommendation). Also you will need a LAN cable.

Hints: Take your time exploring the setup menus of the Mac and Atari comms programs as it took me ages to figure out good settings on both. Make sure baud rate is the same, handshake is RTS/CTS, error checksum is on (use CRC16 or CRC32). Choose the correct port on each machine (LAN for Falcon). As a rough guide you can expect to use 230400 baud without any problems if you are sending TO the Mac from the Falcon (1 Megabyte in around 35 seconds!). You may need to slow the baudrate down to 115200 or 57600 if the Falcon is to receive files, most likely 57600 baud as 115200 gives errors to the point that error recovery takes longer than the slower baudrate.

Experimentation is the key!

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

> am I the only one?) and CAB became commercial. Nobody complained about this in
> those days, CAB 2.0 offered frames, animated GIF's etc, it even came with a
> program to easily log on to your IP. Compared with STIK that is.

I got the impression at the time that the increase in interest may have become a bit too much for Alex to handle on his own. ASH may have been an attempt to keep his workload down...

I'm not sure if iCAB has become Alex' main income...if so he has a vested interest in 'keeping up with the Joneses'. That I believe is why he dropped off his Atari efforts...because his attempt to go commercial was not supported by the Atari community. Its like opening a shoe store and having no one in your town interested in paying money for shoes...

CAB 3 would be nice but I think its destined to be vapourware unless we are prepared to make it a financially viable venture...and that means many more sold units than I
hear CAB 2.x has sold...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

Hi

Having been out of the atari scene for the last 4 or 5 months, I've not been supporting my programs as much as I used to, nor replying to email concerning them :((Since I've bought a PIII PC basically).

However, I've just bought and installed MagiC PC and transferred the contents of my Falcon's HD to my PC, and am ready to delve back into the world of Atari.

Apologies to those people I've not replied to, but work, PC etc. have made it difficult.

I am very conscious of the small hard core group of people that have supported me with beta testing, praise, criticism etc. about my main programs POPwatch and NEWSwatch, and don't want to let those people down by abandoning the Atari platform altogether, and therefore I would like to ascertain the following, before wasting yours and my time in continuing support for my programs:

1. Who still uses POPwatch and NEWSwatch, and would like me to continue support?

2. What bug fixes, new features would you like to see in these (or any of my programs)?

3. What other programs of mine do you still use (CoSTa, GAPFTP (not actually released outside of beta), etc).

If you have any suggestions etc. post them here and/or email me on gary@the-gap.demon.co.uk

Cheers,
Gary

CAB may not show up in listings accurately partly because Dan Ackerman's
STiK overlay identifies itself as Netscape to give access to some sites
which would otherwise reject CAB.

This is not so: if you don't set the line length properly your message
will upset PC and Mac mailers, either in terms of displaying it or
(particularly) when it comes to quoting in replies. As has been gone over
several times here, lines should be wrapped below 80 characters otherwise
they are contravening the relevant guidelines (RFCs). Even MS mailers manage
this feat. Hence Emailer was broken and was most definitely at fault, and
had to be fixed with version 2 as you mention above.

>In fact I don't have to set anything anymore come to
>think of it. I just open the text editor window and set that window to
>the size I like, when the text reaches the border it will wrap itself to

Source record: 74445

```
Croft Soft
Press Release - 19 August 1999
------------------------------

Atari Times - The End...

It is with great regret that I have to announce that the Atari Times has
closed. It has been almost a year since we released our last issue and we no
longer have the time or money to continue investing in creating a top
quality magazine.

We had planned to continue with the Atari Times with an on-line magazine,
but unfortunately there is no longer enough support in both readers and
contributors to sustain such an effort.

The Atari Times Homepage will continue to be available for the forseeable
future, and every previous issue can be downloaded from this page.

Finally, I would like to thank everyone who has supported us over the past
few years - there are too many names to list here.

Long live the Atari platform...

This is terrible news.

In his editorial Joe says that there are too few subscribers and the
current team for family reasons can't continue to put in so much work.

Isn't there something we can do? Pay more? Help with production?

I for one will be very sad to see AC go.

CSS is nice though because you don't have to put in a million Font tags
just to format your HTML site. HTML was never designed for all this
layout things and so the W3C made CSS. HTML4 is the standard, is
supported by 90% of the browsers.
The HTML 2.0/3.2 mix must not die, it will die.

>
> Nice idea in theory, CSS, but on CAB, you get a page that=20
> looks almost as lame as HTML 2.0 did, once all the nicies
> are gone.=20

Yes, but ... the site is easier to maintain, you can still see it in
CAB, the page loads faster . You can't blame web designers for using
CSS, even Atari users mostly use a PC for the internet (according to my
own web stat).
If you use an Atari web browser you can't see the web in it's full
beauty (and slowness) because they don't support Java, CSS etc. . *But*
you can see the information and that's whats matters IMO.

Greetings
Matthias

This is how CAB identifies itself for the server (using I-Connect):

Mozilla/3.0 (CAB 02.73; I-Con.OVL 01.50; MagiC)

Most web browsers (even MSIE) identify themselves as Mozilla. It has
nothing to do with the list of browsers.
However, most web sites use JavaScript to distinguish the web browsers
and CAB has no chance there.

The identification for Light of Adamas looks similar.

Greetings,
Matthias.

>
> There are 2 common causes for the above symptoms:
> - Bad PSU
> - Bad Drive

Could it really be the PSU? The ST would cold-boot fine (ie. without a
disk in), and bring up GEM desktop as normal, but if I tried to open a
disk it would complain that it couldn't find the disk....

> For the floppy drive, you can use a standard PC floppy drive, but you
> have to perform a few changes on it. These are described in the Quick
> FAQ.

Excellent! I've got a now-dead 386 that I can freely canabalise, so as
soon as the website comes back up I'll have a look at that FAQ :)

> I don't think Sony drives were used inside the Atari. All of mine always
> had Epson drives. Anyway, any modern PC floppy drive can be used, the
> difference being in how easy it is to modify it.

My STFM definitely used a Sony drive, but if mine was a bit of a freak
it might explain why one of my friends' ST is still running fine despite
being older than mine :)

Thanks,
Chris

if possible
"export" or "save" the document as an ascii delimited text file.
choices are usually 'comma' delimited(comma between fields) or 'tab'
delimited(tab between fields); with a carriage return at the end of
every record.

if you can do this, then you can import the file into any database
program.
under "import" or "open", or "place"
good luck.bonne chance
ken

Indeed, GUI application is not always the best thing.
What you have to think about (that most people don't, at least here), is
that a simple ascii file is MORE flexible. WAY more. Here are some
examples where a simple conf gile is better than a GEM prog for settings.

1) an ascii file for setting doesn't require as much time to develop (for
the developer), and don't have to think about design, color icons,
editable fields, etc, It just works.
2) ascii inf file is shareable by other to spot any configuration problems
possible. Try to pull out all these settings from editable field into a
text file to show a friend if he can see the problem.
Or try to send the inf file (binary), the other guy will have to load your
info file to check what your settings, not wished sometimes.
3) easier to see if the inf file is corrupted.
4) remotely editable. (not possible in GEM).
5) more prone to MORE bugs from the editor, corrupting the file, or making
non-sense.
6) ascii inf file is often more explicit than the GEM one. why?
because you can basically write as many comments as you want/need (would
be possible in GEM, but has to be quite featured, customed editable
BUBBLEGEM). as in:

```
# MTU is blah blah description.
# here i'll try at 768 for MTU, it worked at 1500 very well.
# 2nd try, ok 768 worked but slower than xxx whatever.
MTU=768
```

7) an ascii is often more intuitive because it shows ALL possibilities,
all flags, don't have to go through some menu (which sometimes are badly
designed) to access some features, you didn't even know maybe.
Best example, I see people saying that imagecopy doesn't support
transparent GIF. That is, missing the feature, coz of GEM either

cluttered and/or badly designed.

8) an ascii file allows any automatic script to do some parsing.
if blah then do that
etc etc
then dump the results or changes in your inf file.

9) allows faster development of the programs core. Because, imagine, X application just added a feature, like automatic resize and you need to specify a ratio.
That would require updating the GEM setter along with the program itself.
And maybe even the design/layout of the GEM setter.

I think you get the idea, GEM client, sure i love them, I love GEM, but it is very hard to find very good setting program, and for many tasks, it is really not needed, sometimes NOT wished.
ascii conf file editable with simple editor is NOT ready to go away.
Because of many things as stated above.

The question i guess is, is it worth it to spend time (consider that writing a soft TAKES time, and i don't think anyone here gets paid either) on developing a tool that will not bring any good really, just because some users gets scared when they see an inf file looking like:

#enter your name, either lower or upper, doesn't matter
first_name=
last_name=

Then save it, They rather have a GEM client to do the same.
Honestly for a PPP stack, what i am looking for is the PPP stack itself, not the nifty conf program. And if that time allows to spend more time/effort on the stack itself, it is worth it.

LAST point: GEM looks friendlier, it is, But think about that:
It is NOT because it has windows and mouse and icons that it makes the software easier or nicer to use.
Only good design makes it and the nature of the software.
Anyone here has calamus SL? do you master it yet?

3354. Telnet For STing

Newsgroup: comp.sys.atari.st
Date: 1999-08-19 00:00:00 UTC
From: bjr@master.localink4.com
Message-ID: <rro1g5soboh32@corp.supernews.com>
Source record: 74453

Okay, been a while since I've asked.
Is there yet, a telnet application for STing that supports ANSI/VT102?
Something that SCROLLS properly, where auto-margining and such can
be enabled/disabled, and color would be nice.

Heck, even a PLAIN TTP type of telent would ROCK...then it could be
launched via COSHY in CoNnect, or some other TERM window of your
choice.

Thanks,
Brian

3355. Re: Telnet For STing

f> (these are the ones that connect via a telephone cable)

Best Electronics will have them, but they're spendy. Expect triple digit price.

Getting their catalog is a valuable book for any Atari user.

They can be reached at, (408) 243-6950

BTW, its not a telephone cable that connects the keyboard, just looks like a
telephone cable.

... Ciao, Don (The only Italian with a German name who speaks Chinese)

ATARIAN - NEW ATARI MAGAZINE

For some time now we've been planning to
release a short-form (16-20 pages) *printed* A4
magazine with disk for Atari users priced at
aound 2 UK pounds.

The magazine would contain a mix of news, reviews,
hardware & software updates, letters, and advertising.

With announcements indicating the imminent closure of 2
much appreciated magazines in recent days, we decided
to establish if there is still sufficent interest
in the community for a another printed magazine.

We have kindly received plenty of interest and
support from prospective advertisers, so now
its your turn.

If you think that you would be interested in
subscribing to Atarian, a regular printed magazine
with disk at approx 2 uk pounds per copy - please
email me at:

Atarian@techsoftware.freeserve.co.uk

If we get enough response we will give it a go!

Kind Regards

Bob

I would certainly be happy to see an increase in the subscription rates if it helped to keep the
magazine going. It would be a great loss.

That's great to hear :-)

> But honestly... Joe... why quit now?
OK, here's a bit more explanation, in the hope it will be useful to anyone
else thinking of starting down the same road we did.

When we started three years ago we asked for at least 200 subscription
"promises" by email and we were delighted to get them. We calculated our
break even point to be 500 copies at 3 pounds sterling and that was our
first print run.

The first 500 copies were sold out the first day at a two day UK Atari Show
and after we reprinted another 800 copies making 1300 copies of AC#1 sold in
total. We were keen, happy, unpaid but viable.

Since then our print run increased steadily to 1600 copies at AC#8 and has
slowly declined since then down to our current print run of 900 copies.
We've now been working three years solid producing the issues up to AC#14
and we, and our contributors, are in desperate need of a rest.

The AC#4 editorial explains all our families have suffered from this
dedication and sadly last weekend our office manager, Brian Stanton, who
looked after subscriptions and renewals, died unexpectedly. Somewhere along
the line we appear to have burnt ourselves out and it has stopped being fun
so we'd like to close the magazine without any of our subscribers, or
ourselves, losing any money.

I'm still an Atari enthusiast and that's not going to change but I do need
to earn a living so the mag (and InterActive) have to go. We obviously
considered at the alternatives people have suggested including cutting the
page count and putting up the price but this doesn't solve the problem which
remains we need a change of personnel prepared to be both dedicated and
unpaid - tempting offer eh?

I believe it is still possible to sustain a semi-commercial publication
similar to Atari Computing and wish anyone who undertakes such a venture the
very best of luck - I'll certainly subscribe, it would be really nice to
read an Atari magazine again that I hadn't written or edited.

Imagecopy surely has a PNG feature and so does Graftool too.
Gemview takes too much time to get loaded. The best bet is Imagacopy. It
loads fast.

From: atarist@xs4all.nl
Message-ID: <7phhfr$35e$1@news1.xs4all.nl>
Source record: 74467

Sometimes I surf and see strange things.

yesterday a page came on the screen and I was told:

'We have detected an inablility to perform Javascript requests'
and
'enable Javascript'.

But CAB does not have that (yet?) so I looked only at empty pages
further in in that site.

Now they know I do not have Windows. Maybe SPAM will come my way
urging me to buy a Intel-box.

Met vriendelijke groet,

From: jovlie@xs4all.nl
Message-ID: <7pi00knin1@news1.xs4all.nl>
Source record: 74468

Hi everybody !
Didn't realise that my message CAB 3.0 !! had so many of you reacted !
That was very supporting, thanks to you all !
In the meantime I can tell you, that Mr. Alexander Clauss has replied
to me, that he is deeply involved in Icab and don't think he'll ever
have time to develop a thing as CAB 3.0 for Atari.
So that's history until now.....
Let's focus on Wensuite 3.20 .Do you believe that these French people
did so much effort for a failure, for a product that doesn't work ?
No, sir !!Let's get positive !
Allright, I admit, it doesn't work YET !! But guys, buy it, please !!
WHY ?????Cause we have to become the testteam of people (French) ,
who dare to bring out a new Atari product !Let's give them all our
positive advice, our positive and negative experiences, in order to
get a product, which can meet today's standards and which can enjoy
the hobby of us all !
This is not the world of Mr Bill Gates, no this is our Atari world
and we don't want software from the 80's and early 90's, no, we want
software from now until the next millenium, WHY NOT ??
We're looking for developers, who can update our soft- and hardware,
it's possible, believe me.Only....it will cost us some money, SO WHAT
??If you don't want to spend money on your computer, man , buy a
Pentium and copy the whole shit from your neighbour !!!
Jos

Pity, it's about the only one that comes close in terms of terminal
emulation.

>Really, just a telnet.ttp for STing would be a dream come true.

As far as I know the only real alternative is TelStar (from the STinG pages
if they are still there). This is very nice in many ways but only emulates
VT52, inadequate for some purposes.

Body handling: HTML body converted to readable text

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

For Atari Sales and Service from someone with nearly 20 years of Atari experience go to my Web site below or E-Mail me at atari@benjamin.net where you can find for the Atari 8 Bit coveted Happy Drives and other Disk Drives modified for increased performance and speed. As well as a library of Reference Materials from COMPUTE! Books. You can find NEW Atari ST software Marked down in Price, Disk Drives made by Indus for the Atari ST and Reference Books Published by ABACUS and I've added and will be adding more Hardware, Software, Books & Accessories for Classic 8 Bit and Atari ST. So checkout what's new on my WebSite. And remember if you dont come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to meet with other Atarians. Read the Ad near the bottom of this message.

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. We meet the 2nd Tuesday of each Month. Our Next meeting will be Tuesday, September 14th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. Get together with other Atarians. Make friends, meet new people, maybe find an old friend. Eat Pizza, drink Pop & Beer in a decorative atmosphere. Bring your family to a family friendly place. For more info try:

http://pac.pdxweb.net

e-mail: atari@benjamin.net

For more information or directions, please call our Vice President
Ben Smith at (503)256-9974 See you there!

Please Direct all Replies Through E-Mail to: atari@benjamin.net or
bensmith@teleport.com. If you can't reach me at benjamin.net see my
E-Mail/Web info in my Signature at the Bottom!

5 times no. It is announced for a future Adamas version but don't expect this too soon.

> But perhaps only a few non-Atari browsers support it?
92% support PNG i.e. generation four browsers on Windows. There are a few exotic ones as well (Amaya). No browser has support for all PNG features.

Personally, I made the experience that in most cases the duo JPEG and GIF produce smaller images than PNG.

You certainly don't need all this for a web browser. Even the latest
versions of NN and MSIE don't support every feature of PNG.

>Only making a module for CAB that simply sets a PNG on
> the screen is a lot of work.
>
Using OLGA is a better idea - no fuss with modules plus you are
independent from the browser. So one of the graphic viewers has to
support OLGA-ID4 and there you have your PNG viewer.

> But maybe the makers of PNG have a library of C functions to help

I guess there was one. There is a PNG page at the W3C site.

I am using both programs. With the last version of STiNG they provide
a fast transfer.

>2. What bug fixes, new features would you like to see in these (or any of my
>programs)?

a) NEWSwatch:

- If during retrieving messages the telephone connection is broken,
computer hangs. (My OS is a SingleTOS 2.06)

- A feature I am still missing:
Instead retrieving all messages from a newsgroup, to get a list with
subjects, authors, dates and Message-ID's.
It is very useful when occasionally searching a new newsgroup.

b) POPwatch, GAPftp: To mask passwords when entering and in a log file.

c) To adapt SPAWNER to be working under a SingleTOS.

>3. What other programs of mine do you still use (CoSTa, GAPFTP (not actually
>released outside of beta), etc).

GAPFTP - it is really fast! :)))))))))))

You can update right from http://uvk.atari.org. People who bought the program through me and who have paid for future versions will get the disk sent as an extra service, or can contact me to get the remainder of their money back. People who pre-paid updates through other supplyers...well, those supplyers had no right to allow pre-paying to be done. I explicitly stated to them that I could stop making UVK any day (which is, to them, the same as making is shareware).

>selected. Click OK, and you're set!

Thanks for the information. I forgot to mention in my previous post that I had already checked that. It ended up being an MROS driver conflict...

You see, I just bought a used FDI, and apparently the FDI drivers didn't get along with an MROS driver I have for a little LAN-PORT MIDI out expander box (it's actually a MAC MIDI interface that gives you an aditional 16 MIDI OUT channels - a driver was written so the Falcon could use it with CAF). Anyway, this driver for some reason causes the mixers to cease functioning when used with an FDI. I don't know why, I just know it does. ;^(

I discovered this after messing with CAF for a few hours, and re-installing backup versions, I was still getting nowhere. As a last ditch effort, I decided to try one of the original backups I made of the program a couple years ago. And it worked! The mixers were back! (Of course the reason it worked was because this early backup DID NOT contain the LAN-PORT driver file - which at the time I didn't yet know was the cause of my problem).

But after some more testing and messing about, I confirmed it was indeed this LAN-PORT driver file causing all the trouble. I made sure of this by deleting the LAN-PORT driver, and the mixers worked. When I put the driver back and ran CAF, no go on the mixers. Now obviously I never had this problem with the mixers before because I wasn't _also_ running the FDI and it's drivers!

Wheeeeeeeeew... and I was getting ready to throw this Falcon out the window many times today. The words "PC" were sounding better and better as time passed and I pulled more and more hair out of my head.

Well, it sounds like you need some software to get started. You can
check out the following URLs that should get you started:
http://quickfaq.atari.org for general information about the ST
computers.
http://utsi.atari.org for basic software
http://launchpad.atari.org for a very complete list of links, including
an FTP site list

I doubt that. If it's included in the wait for/resp sequence of the (StinG)
script then it must come in from Zetnet.

>Can you get some info from you club mate.

Next meeting isn't until the 1st Sept. Have you tried asking in the Zetnet
Atari support newsgroup?

>increase the baud of my modem.
Do you actually mean this?

If you want to send commands to your modem to tell it to connect at
different speeds and so on, then you can put them into the dial.scr:

```
# Modem Specifics
#
INIT = ATZ

.etc
```

If you think that there's a fault with your modem then probably the best
thing to do is to fire up a terminal prog and issue a factory reset - AT&F
IIRC.

Otherwise if it's the serial port speed that you want to set, then you must
install serial.cpx from the STinG archive and set it in that. 19200 is the
max for an ordinary unaccelerated ST as has already been pointed out.

I use Spawner from time to time. It's very useful (Falcon, MagiC 6, NVDI 5),
but it won't run TTPs in the VT52 window - I get the horrible white TOS
screen.

Incidentally, I've found that I can get TTPs to run in a much tidier manner
by renaming with a GTP extender FWIW.

This is not an answer, just the same problem. However although HDDriver doesn't 'see' my CDR drive (a Yamaha-don't know the number) it does pick up th Sony CD555 I have. But! on booting up the CD doesn't always show up on the desk top whereas the CDR does. I can read from the CDR but I'm not sure about writing to it. Initial trials seem ok. I also use Extendos, this detects both drives. I think the problem is getting the SCSI chain just right.
I've just checked HDDriver using the auto-configure option. Neither CD drive is shown. Perhaps this option shows only disk drives. I have 2 drives & a Syquest unit and all three show.

There are many ways to compress an image into a PNG file. Most
programs take the easy-always-goes- way. But some optimising can
reduce a PNG file to a more compressed and shorter PNG. At least in
theory a PNG can be made smaller than a GIF. But most GIF is 256
colors so do compare them well.

>
>Jos

Hi

Hddriver (7.51) does seem to have a problem with that. I have 3 x 6
CD_ROM changers, 2 of which HDdriver detect! 1 it doesn't, even with the
configuration settings!!

ExtenDOS detects it though so problem solved.

A while ago I had trouble getting my MO optical drive detected by
HDdriver. After someone had had a similar problem, I followed their
suggestion and tried every device ID on the drive.... The only way I can
use the MO drive with Hddriver with my other drives, is having my main
hard drive as device 0 and the MO drive as device 1!!!!!

I don't have a problem with ICD with detecting drives, but as I use the
DOS compatibility I have to plod on.

Yep, I have seen your review

>WenSuite is developing for about two years and I have not noticed a

The same story for LoA which is on my Hades not stable at all. It really crashes all the time.

>You can, however, report bugs to Oxo, which is generally a good idea.

Reporting bugs is always a good idea but then the progammer has to listen too which I unfortunatley can't say of the LoA programmer.

>But people had to pay for updates which were mainly bugfixes and Oxo
>should at least reach the level of CAB 2 or Adamas 1.0 which they
>haven't IMO.

Fully agree with you. Bugfixes should always be for free. The LoA do a great job here. Wensuite? I don't know for sure but I think it's possible now to download bugfixed version for free. Cab wasn't for free AFAIK. They always implemented some minor new things so they could ask money for it.

>The question is: how much do I have to pay until WenSuite
>is a stable product with most functions available?

Again I think one can turn a betaversion into a registrated version now. If this is true then the bugfixes are for free because one can download then from the Net.

>The WenSuite icons are nice though :-)

Indeed the Wensuite GUI is much nicer then the LoA one (eek, that ugly green)

>An Atari program should run on an Atari, I think ;-)

I'm surprised it crashes under MagiC as the programmers uses a Mac with MagiCmac.

Yes, the surely should do that, but again this is my experience. On my
machine running N_AES/MiNT Wensuite has proven to be very stable. Adamas
unfortunately not. I really crashes all the time. On other machines LoA
might work better but as you've said Atari programs should run on every
machine. Allmost all the new programs runs on my setup exept for instance
En_Vogue which crashes with an 'Illegal Instruction: User PC: 20c640
message' I guess I should report that to the programmer:-)

Real STiNG/MiNTnet support or only some kind of bridge between Draconis
and the STiNG clients like Ifussion or whatever that thing is called?
I surely hope that they will implement at least STiNG support.

Hi Ken,

I missed more, I know that but the list would be very long... For Linux there are Arena, Red Baron, Grail, Mosaic. Maybe more? Same for NetBSD and perhaps for Mint/Minix.

I just wish the list for "Atari" would be that long :-)

Hi Martin,

AFAIK, yes you can. I got the key, had 3.12b lying around already and it
turned into a "normal working" version. I fetched the update 3.20a from
their site. Seems there is a new one 3.20b, maybe even a newer one.
>
>>The WenSuite icons are nice though :-)
>

I checked today in 8-bit mode (256 colors): it simply makes a mess from
the graphics. In TC at least 3.12 showed up perfectly. 3.20a did not.
No matter how I set the stuff, Atari or ISA/PCI (the Matrix option is
greyed out).

I think Mac plus MagicMac is not the same as Atari plus Magic. I think
this is the key factor: they should program to run on an Atari, not on a
bloody Mac with MagicMac.... BTW, it crashes from TOS just the same.

Ronald,

GIF can be no more than 256 colors. Period. JPEG can be anything up till
16.7 mil. So can PNG.

A 256 colors PNG file is slightly smaller than the same file in GIF.
A 16.7 mil colors PNG is larger than a ditto file JPG (well unless you
turn Q in JPEG to 100%).
PNG has a compression option too. The difference is that JPEG looses info,
PNG does not.

Don't forget the possibility of oxidation on the chip pins. More
than once, esp. on old STs (520s), the drive would quit working and
I'd get mysterious error messages, and doing the "drop fix" or openning
her up and prying up the socketted chips and then pressing them back
in would solve the problems.

I should say check your system:-)
On my Hades with a PCI Mach 64 4 MB card WS 3.20a (b) runs in every color mode except in 16 bit (32768 colors) and 32b color mode. With 32768 colors the graphics are totaly messed up. In 32b color mode all the graphics are in blue. BTW: Imagecopy has the same problem in 32b color mode.

256 colors, 16 bit (65536 colors) and 24b color mode no problems whatsoever

I'm maybe wrong but isn't that so that many new programs are programmed on Mac's or pc's running MagiCMac or MagiC-pc?
Xinfo for instance is AFAIK programmed on a pc. And what about Calamus SL99?

Hello Guillaume,

GD> Can anyone tell me the difference between .APP and .PRG executable-
GD> program extensions? Just being curious...
.APP (application) is the GEM standard name for programs (as used on the
original GEM platform in the Intel world). For some reasons I don't know,

Atari decided to make .PRG to it's standard program extension. So unless
it
is an Atari GEM program, there are no differences - just a little bit more

"gemlike" (and regarding to my own experience: The author just wanted to
state his "real" GEM coding) ...

Greetings, Oliver

Hello? I hope you mean "accessible for Java-Script /disabled/ browsers".
Some web "designers" today seem to never have heard that you can create
pages without the /need/ for JavaScript. Even worse: I once found a site
with a form that got sent to a CGI. It had a Gif named "submit", but it
didn't submit the form as one would expect (<input type="image" ...>),
but just with 'onclick="form.submit"' on a regular <img>. That kind of
incompetence (or silly software) really hurts ... It made the form
unusable without JavaScript, although the method used didn't offer any
advantages to the standard way. *sigh*

Ciao

Thomas

> Xinfo for instance is AFAIK programmed on a pc. And what about Calamus SL99?

Also it gives you the possibility to code with CodeWarrior and use
TOS-Linker as opposed to Pure C (which is quite old looking, modal
dialogs, no VA_START etc.) (Only prob is that TOS-Linker doesn't support
the full C++ language but that is being worked on..) So maybe when
TOS-Linker is in more of an advanced stage we will see "certain" programs.

I'm sorry for my mistake, I meant to write IP! Most ISPs use dynamically
assigned DNS addresses.

>>:>I'm confused by the manual tho', which instructs that one is to determine the
>>:>numeric addresses for the various servers with the get_ip prog and plug them
>The same here. Only the names of the postserver and the newsserver is required.

My brief test seemed to show that the addresses changed from one session to
the next anyway, so it didn't seem to be a good idea to plug any numbers in!

I can probably help you with these, mail me direct with details of
exactly which files you need. (They should be available from the
steinberg ftp site but despite promising to replace the atari files
steinberg have left the Cubase and Cubase Score directories empty.
There are some Cubase Audio files still available.)

>Also does anyone know where i can get my Atari Mega ST1 upgraded to 4Mb?

Tell us which country you are in and someone local will probably help
you.

Another moot point... Let's face reality please: Wensuite has been around for some time. We're at version 3.20 now. It's been commercial from day one, if I recall correctly. Appearently it still doesn't work right, or at random or not at all. Personally I don't give it much chances unless they start buying Atari h/w and start reprogramming. Or do you expect me to buy a Mac with MagicMac??? Does it work OK there???

>We're looking for developers, who can update our soft- and hardware,
>it's possible, believe me.Only....it will cost us some money, SO WHAT
>??If you don't want to spend money on your computer, man , buy a
>Pentium and copy the whole shit from your neighbour !!!

Maybe we stand better chances to start yelling at the Netscape people, asking them for a port to Atari.

They way I see this?
1. As long as OXO and team develop on a Mac, no chances for Wensuite
2. Alex is OUT. GONE, that is. Kissy-kissy goodbye.
3. LoA: much work to be done, but maybe the best future option.
4. Does Alex still own the rights to CAB? If ASH are really smart, they start developing CAB themselves... Personally, I have far less objections to commercial s/w that works, even MagiC biased, as opposed to s/w that's commercial from day one but after years still doesn't work.

Solutions for now: stick to an old but working CAB and take all the
shortcomings. And maybe wait for LoA to become fully functional.
Switch to a Peecee. Yes folks, there's more available than IE and NN alone!
Switch to a Peecee + Linux (or NetBSD, whatever) [as from next Monday: my
option]
Switch to a Mac: several options, including iCAB :-) [Alex would love this]
Switch to a Mac + MagiCMac: Wow, Wensuite is a killer now (??????????)

I've just found a PNG library for the Atari ST on atari.umich.edu.
There are two versions: one for GnuC++ and one for LatticeC.

Then this page is really JavaScript based.

>
> Now they know I do not have Windows. Maybe SPAM will come my way
> urging me to buy a Intel-box.

Most browsers support JavaScript and it has nothing to do with
Intel/Windows. Mac and Unix browsers support JavaScript as well. Every
site with a decent stat program running in the background knows that
you don't use Windows.

If you need access to a JavaScript site on the Atari you'll have to use
Adamas (pro).

I don't know who owns the right but ASH still sells old programs like
STad or Signum 2. At least a good programmer has to ask Alexander and
ASH for the source code.

I think everyone can say his/her opionion in this newsgroup. I agree at some points with Jo's criticizm. I have reviewed WenSuite three times in the ST-Computer magazine (Germany). All three versions (1.4, 2.0 and 3.0) belong to the worst Atari programs I ever reviewed.

> Why can't you leave then alone? Do you really want to bring then down
or
> what?

that is
> the Atarians, is Wensuite and LoA. Wensuite is progressing but you're
so
> dazzled by your hate toward the Oxo people that you can't (or refuse
to)
> see it.

WenSuite is developing for about two years and I have not noticed a great difference. 3/4 of all options are grayed out and the HTML rendering is far away from perfect. Let's not forget that a team works on
WenSuite so they should track down errors more faster than Alexander or Jens but
they haven't.
You can, however, report bugs to Oxo, which is generally a good idea.

> Sure, there is still lots of work to do -expecially the dithering
isn't
> not that good- but little by little they brings their product to a
higher
> level. Only with the support of us Oxo can and will improve Wensuite.

But people had to pay for updates which were mainly bugfixes and Oxo should at least reach the level of CAB 2 or Adamas 1.0 which they haven't IMO. The question is: how much do I have to pay until WenSuite is a stable product with most functions available?
The WenSuite icons are nice though :-)

> All I can say of Wensuite is that it is, in regarding to Adamas, very
> stable and above all it supports true color which unfortunately can't

be
> said of Adamas.

Tried the latest v3 on my Falcon: crashes under MagiC6 and SingleTOS.
An Atari program should run on an Atari, I think ;-)

> Now let use hope that Oxo (and MUCS) will decide to implement
> STiNG/MiNTnet support so we can use it alongside with our usual

It was (is?) available in the UK by 16/32 bit systems. Oxo also showed up on a past Atari fair in Neuss (about two years ago) - they didn't sell many copies. So it's not just a matter of availability but also of quality.

3425. Reading an Atari hard disk on Linux/x86 ?

Newsgroup: comp.sys.atari.st
Date: 1999-08-20 00:00:00 UTC
From: Laurent Charrière <lcharriere@klee.fr>
Message-ID: <37BD4CCE.F6FA52D8@klee.fr>
Source record: 74486
Cross-posted to: comp.sys.atari.st,comp.os.linux.m68k

Hi everyone,

I have an SCSI hard disk that was the main disk of an Atari Falcon (under standard TOS). Now I have a PC (shame) under Linux with an SCSI controller. Is there a way to read the files on the Atari HD under Linux/x86?

More specifically, will the kernel (what version?) read the partition table? (I think I had both GEM and BGM partitions) Will it recognize TOS filesystems?

Thanks in advance,

LC.

3426. Re: Wensuite 3.20 !!

Message-ID: <37BD4E16.9BDAFDBC@patent.gov.uk>
Source record: 74487

Hi Jos,

I tend to agree with you. OXO have re-established thier web presence and they posted two versions of Wensuite in rapid succession, 320a on the 14 Aug. and 320b on the 19th. Hopefully this indicates they are starting to feel a need to communicate with the outside world, so don't blame them for disapearing again, if all they find is negative after negative response. Wensuite is potentially a much more mature product than CAB, designed from the start with embedded News group, 'mail etc 'plug-ins. CAB was started by Clauss as a local HTML reader and it was outsiders who had to extend its use to the web and other clients etc. I cannot see the disadvantage of not using Sting. How can you ask for the programmers to deviate from linear development just to recode so that Wensuite uses Sting. One repeated grumble is the slow development, this is hardly going to help!! Everything I can see a need for, is already provided for at a button click away in Wensuite. I know some of them don't work in the demo. I downloaded ws.320b from thier page last night, and it worked first time on my Falcon. I agree with the point that the images seem to be posterized, so what, anything you are interested in , you save, as file, in full colour! Some of the formating is week, but the main point is speed, I know its only local speed, but it is very much faster than CAB. Give OXO a chance.

Bob King.

Hey out there, currently seeing the countryside and here in St Louis. If you are an Atari user in this area, drop me an E-mail. I'd love to call/visit!

I'll be travelling 270 to 44 to 35 going through Missouri, Oklahoma and back to Texas... So if you're along that route.. again drop an E-mail. Would like to make good use of my time off and my rental car. :)

Finally, isn't there a user group in the Missouri/Illinios area? If so, where and when do you meet?

Write me at:

clu-da-bard@geocities.com

Take care,

Clu

From: hanson@avlna.com
Message-ID: <7pk017jp1@nnrp1.deja.com>
Source record: 74493

I have a large amount of Atari ST equipment for sale.

Here is a small listing of what I have:

Mega 4
Color Monitor
Mono Monitor
Moniterm Monitor (Large Monochrome monitor 19" I believe)
Monitor Master
Cordless Mouse
520 ST with 1 Meg
Tons and tons of software
Several hard drives
Tons of other hardware (some never used)

Contact me via email (hanson@avlna.com). I do not have news access!!!
All will go to the best offer (shipping costs are additional and are
not included in your offer).
Splits may be available depending on the offers

I am located in South Eastern Michigan.

Last Updated 08/20/99
- Sold items removed
- New Hardware added

Once again thanks for all the offers. It has been an interesting week, with plenty of email to answer, and plenty of calls to UPS to get things squared away. I (we) have gone through all the email and local offers and I have removed all the sold items. If you did not get an email response back from me in regards to an offer, please email me again (if the peice(s) you wanted is still on the list). Theare were also several people who emailed us offers (some of which were accepted) but did not return our emails.

We have had many people from overseas inquiring about some of the items, we have no problems shipping the items to you (remember you pay the shipping) but all the items are for 110 voltage, so you will have to use a power adapter for 220V.

If we are lucky, we may get some of the matching software for all the manuals this upcoming week, and we are hoping for another 1or 2 Atari Portfolios As I said before, I will continue to update this post as we go through the rest of the equipment or sell items off. Please see the original post for the story behind all this equipment. I have incorperated all the new equipment into my regular style of post and added in some of the items that I/we already had laying around. All the Atari equipment has been tested and appears to work fine, however the IBM development tools and hardware has not. We have no reason to believe that it won't function properly as the majority of all of the added equipment is in very good shape and boxed. If you have any questions please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post. Please note that I am in Western Canada, so shipping to the US will be slightly more expensive on larger items (however if you are in the US, you have the exchange rate on your side).

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========

Please note that at the time of this posting, there are multiples available
of many items
- Atari 600XL - with power supply, RF cable
- Atari 800XL - missing power supply
- Atari 800XL - with power supply, RF cable
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST(s) - Boxed with power supplies and mice - 1 of 5 units left
- Atari Mega4 ST(s) - Boxed with keyboards/mice and power supplies - 1 of 3
units
left - offer pending
- Atari PCT1426 13" Monochrome TT Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supplies and Laser Printer
Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supplies and cables 1 of 3 units left
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like
New
- Atari 5 Volt Power Supplies. Model C061982. 7 Pins.
- Magic Sac 1 Mac Emulator Cartridges (with manuals, NO ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY
XBR or XBR II RGB Monitor

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 2x Wico Joystick (Black handle with grey base) - for Atari & Commodore
units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore
units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, &
software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, &
software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals,
software - NO ROMS or cartridge)
- AtariWorks - by Atari (with manual and software (unopened))
- MidiMaze - by Hybrid Arts (Complete with packaging, manuals, & software)
- Flash Telecommunications package (Complete with packaging, manuals, &
software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

IBM PC Development Packages/Software/Hardware Please make an offer
==========
- Borland C++ - by Borland (software only 7 Disks)
- Turbo C - by Borland (software only 6 Disks)
- Turbo Debugger - by Borland (software only, 2 Original Disks + 2 Accessory Disks)
- Turbo Assemble - by Borland (software only, 1 Original Disk + 1 Accessory Disk)
- Gem Applications - by Digital Research. Contains GEM/3 Desktop Installation Guide & software, Fontware Installation Guide & software, GEM Artline manual & software, Digital Research Customer Support Guide, Gem/4 software.
- ShowTune Midi Transcriber - by Thought Processors
- The Note Processor - by Thought Processors
- Voice I/O Card (model VRP-70C) - by Compunic Electronics (complete with card, manual, & software)
- PCD-GM Midi Interface Sound Card - by Midi Land (cards alone)
- Portman PC/P Midi Interface for the PC Parellel Port - by Midiman (complete with hardware, software and manuals)
- PCD401 CD Sound Board - by Midi Land (Hardware and manuals)

Miscellaneous Software Please make an offer
==========
- Equate - by Holosoft. Spreadsheet software for the Apple Newton (complete with box, manual, and software)

8-Bit Books Please make an offer
==========
- Consumer's Guide "The Users Guide to the Atari"
- Compute's "Third book of Atari"
- Compute's "The Atari Basic Source Book"

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari

(with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD

- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

3434. Atari Software and Hardware for sale, swap or P/x etc.,

The Atari Software eXchange

Updated: Saturday 17th July 1999

I have the following Atari gear for sale. Prices do not include postage.

Prices are in GBP's (Sterling) and I'm also willing to accept USD's.

As usual I will consider part exchanges or swaps for other Atari St, Jaguar, Portfolio etc. hardware or software.

Things I'm on the lookout for:
Atari CD-ROM's, reference books, EPROM Programmer that can do 32-pin DIL chips.. or anything that tickles my fancy;)
****

Atari ST Compilation Packs
Atari STE Discovery Xtra Pack, featuring:
Final Fight, Sim City, Escape from the Planet of the Robot Monsters, 9 Lives and the Language Disk. ..... ï¿½5

Atari 520STE Turbo Pack, Featuring:
STOS, Hyperpaint 2, Music Maker 2, FirST BASIC, Blood Money, Anarchy, Human Killing Machine, Impossible Mission, Dragon's Breath, Indianna Jones and the Last Crusade, Outrun, and Super Cycle. ..... ï¿½15

Compilations
ï¿½3 Each
Top Shots, featuring: Kick Off + Extra Time.

ï¿¼4 Each
Hollywood Collection, featuring:
Ghostbusters II, Indiana Jones and the Last Crusade & Robocop. No Batman or instructions.

ï¿½5 Each
Champions, featuring:
Manchester Untied, World Boxing Championship & Jahangir Khan Squash. No Box.

TNT, featuring:
Xybots, Toobin, APB, Dragon Spirit & hard drivin'.

Mega-lo-Mania & First Samurai.

Educational
ï¿½4 Each
Learn to Read with Prof. Level 1. Ages 4 to 9. Not STE.
Mickey's Runaway Zoo (Disney Software) - Learn Numbers for 2-5 years.

Adventure, Strategy, Puzzle & Trivia type
ï¿½1 Each
Spidertronic

ï¿½2 Each
Crash Garrett
Go-Moku/Renju
Quizam!
Skweek
The Quest for the Time Bird
Tower of Babel

ï¿½3 Each
Advanced Dundgeons and Dragons 'Heroes of the Lance'. No box.
Borodino
Chess Player 2150
Corporation
Curruption. No Box.
Driller. Including a model of the planets surface.
Dungeon Master Editor. No box.
Dungeon Master Expansion Set #1 - Chaos Strike Back & Utility Disk.
Federation of Free Traders (F.O.F.T.). No box.
Lords of Chaos
Murder

ï¿½4 Each
Operation Stealth

ï¿½5 Each
Carrier Command
Kings Quest I. No Box.
Kings Quest II. No Box
Kings Quest III. No Box.
Buy all 3 Kings Quest Adventures for ï¿½15 inc. postage (UK only).
Leasure Suit Larry in 'The Land of the Lounge Lizards'.
*** WARNING ***
Leasure Suit Larry contains ADULT Material.
Parental guidance is suggested.
Powermonger including World War 1 edition
Shadowlands
Space Quest. No box.
Terrorpods

ï¿½7.50 Each
Civilization. 1 meg. No Box.
Midwinter II Flames of Freedom. 1 meg.

ï¿½10 Each
Frontier - Elite II. 1 meg.
Indy - Indianna Jones and the Last Crusade 'The Graphic Adventure'
(6 disks). I've no idea if this needs 1 meg! It comes with The
Arcade game as well.
Populous II. Both 1 meg and 512k versions.
Railroad Tycoon. 1 meg.

Simulations
ï¿½2 Each
Hunter Killer

ï¿½3 Each
Falcon The Mission Disk Volume 1.

ï¿½5 Each
Battlehawks 1942
Falcon. The F-16 Fighter Simulation. ï¿½7 including Mission disk 1.
Flight of the Intruder. Additional Features for 1 meg owners.
Gunship
Mig-29 Fulcrum. 1 meg needed.

ï¿½7.50 Each
Formula One Grand Prix (Microprose)
M1 Tank Platoon

ï¿½10 Each
F-19 Stealth Fighter.
Knights of the Sky. 1 meg.
Reach for the Skies. 1 meg.
Silent Service II. Requires 1 meg.

Sports
ï¿½2 Each
Football Director II
Hyperbowl. No Box.
Super League Soccer
World Cricket

ï¿½4 Each
Kick Off 2 + World Cup 90

ï¿½5 Each
Sensible Soccer. 1992/3 Season Edition. Computer Game of the Year '93.

ï¿½10 Each
Championship Manager End of 1994 Season Data up-Date disk.
Comes with Championship Manager (1 meg) and Championship Manager
Italia. Altogether 8 disks.

Arcade
ï¿½1 Each
Nitro Boost Challenge

ï¿½2 Each
Alpha Waves
Bad Company
Ballistix
Cabal
Defenders of the Earth
Fast Food. Featuring Dizzy.
Flood
Formula 1 Grand Prix (not Microprose)
Hard Drivin'
Hong Kong Phooey
Mean Machine
Outrun. No instructions, you don't need them.
Popeye 2
Robocop
Steg The Slug
The Light Corridor
Whirligig
Yogi Bear & Friends in the 'Greed Monster'

ï¿½3 Each
Awesome
Barbarian (Palace). The one with gladiator 'Wolf' on the box.
Barbarian (Psygnosis)
Cap'n Carnage
Captain America. No Box.
Championship Wrestling
Chase HQ II. No Box.
Combo Racer
Daley Thompson's Olympic Challenge. Not STE.
Defender II
Dragon Breed
First Samuri. No Box.
Golden Axe
Harley-Davidson 'The Road to Sturgis'
Hudson Hawk
Impossamole
Mach 3
Menace
Monty Python's Flying Circus. No Box.
Operation Thunderbolt
Oxxonian
Prince of Persia
Risky Woods
Robocop 2
Shadow of the Beast
Speedball 2
Spindizzy Worlds
Spitting Image
Star Breaker (Brand New) Still Shrink wrapped.
Star Wars

Super Hang-On
Switchblade II
Teenage Mutant Hero Turtles
Test Drive
The New Zealand Story
The Simpsons - Bart V's The Space Mutant
The Untouchables
Thunder Blade
Total Recall
Vigilante
Wizkid. No Box.

ï¿½4 Each
Ghostbusters II
Lotus III

ï¿½5 Each
Street Fighter II

There is a program called assasin which will help you set up GDOS. I also have a program that came with Hyperpaint when I first bought my STe years ago. I has an excellent GDOS installation program with it. I'm not sure if it's part og the GDOS distribution or not.

Use the Serial cpx that came with the package. if you have HS modem
istalled it changes the rates. I don't understan what it does, but set the
rate at 115k and you should be ok.

3439. MagiC Online Backup Page Online

Newsgroup: comp.sys.atari.st
Date: 1999-08-21 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <37bee0ca@skylite.connect.ab.ca>
Source record: 74350

As many of you know, MagiC Online has been unreachable for the past week or so. This is due to serious problems at Atari.org and we wish them luck in fixing whatever is wrong.

However, just because Atari.org services stop does not mean that the atari news does too :) For this reason, we have set up a back-up page of MagiC Online, this page can now be found at

http://thor.prohosting.com/~bengy/

This is a full duplicate of the http://bengy.atari.org website with one exception: Although you can browse through the download bay, no file archives can be downloaded from this location.

Other then that, The page will get updated with news and information on an almost daily basis. Note however, that as soon as the Atari.Org services resume, this page will go into a deep "sleep" until it is needed again.

Thanks,
Bengy

Source record: 74417

Brian Stanton (aka xray@cix.co.uk)

There has been some mention of Brian in the last day or so, but perhaps an 'official' announcement is required :(((

It is with sadness that I have to report the sudden and tragic death of my friend, and Atari Computing's subscription manager, Brian Stanton on Monday 16 August 1999.

To say that I am shocked and saddened is an understatement. I had been speaking to Brian on the telephone on the previous Saturday discussing our plans for a meeting later in the week.

In practical terms it means that until we get access to all the records (both paper & data) that Brian held a state of limbo may appear to occur in relation to outstanding orders. Brian was in the process of dealing with a large batch of orders that I had given to him a fortnight ago. We will need to ascertain how far he'd got and get ourselves sorted, so please be patient and forgive any delays.

Hi,
Doesn't the users manual say anything about it?
Anyway - since I don't use AudioMaster myself, I have no idea - but try checking SoundPool's support pages at www.soundpool.de, or send the question to them directly at info@soundpool.de and I'm sure they'll give you an answer within a few days.

Hi,
If you're looking for new ones - check out www.lineaudio.se . Line Audio Design make the famous JAM and FAD-boxes and if you contact them they can tell you where the closest dealer is located.
Used ones? Well - my own JAM-IN2 isn't for sale... ;) Maybe someone else...

Cubase Audio works in higher resolutions and it's great to have more
tracks available on the screen :)
You should be able to buy CAF at any music or computer store, since it's
commercial software - even though Steinberg made the decision not to
develop it any more :(
If your retailer doesn't have it, you should be able to get it from the
national distributor since I believe many people have made cross-grades
of their Atari versions to VST for Pc or Mac and therefore the
distributor's stock should be bursting by now...

Best regards,

I can absolutely recommend SoundPool's MO-4, which gives you 4 extra midi outs (that's 80 midi channels!). I've used mine for a couple of years with no problems at all :)

Hmm, my Falcon seems to be the exact opposite of your Hades - WenSuite crashes, Adamas runs fine!

> >Tried the latest v3 on my Falcon: crashes under MagiC6 and SingleTOS.
> >An Atari program should run on an Atari, I think ;-)
>
> I'm surprised it crashes under MagiC as the programmers uses a Mac
with
> MagiCmac.

All three MagiC version are different. At least all emulators are different somewhat - programmers would need an army of beta testers to cover them all.

Adamas
> unfortunately not. I really crashes all the time. On other machines
LoA
> might work better but as you've said Atari programs should run on
every
> machine.
>Allmost all the new programs runs on my setup exept for instance

I wrote *should* and *Atari computers*. An Atari program has to run at least on an original Atari (Falcon,TT,ST). Then the clones - but Medusa, Hades and Milan are very seldom (at least the Milan is getting more common in Germany). Oh well, and most of the programming tools are still from 1993 or earlier.

I'm only able to do beta tests on a Falcon, PC and a Milan - I guess if programmers test their creations at least on two Atari like computers/emulators there is a great *possibility* that it will run on other systems as well.

> En_Vogue which crashes with an 'Illegal Instruction: User PC: 20c640
> message' I guess I should report that to the programmer:-)

Should I give you his email address? ;-) BTW, tests were only done on a Falcon (...and this machine is still en vogue!)

> >Will come - at least for Draconis.
>

A bridge between Draconis and STinG clients. I guess that's a good start.

Greetings,
Matthias.

You might look for a used Syquest drive (44, 88 or 135 meg drives and
something like a ICD Link 1 or 2 as a host adaptor.) Works great on
an ST.

I don't know if there's still a user group.. But there is a ATari
Dealer still @ Systems for Tomarrow in Independance Mo
(Near Kansas City MO). I stop when I'm back home on leave.

Hey, I found out about our good ole friend in Missouri, and I can
now appreciate the drive he makes to Texas on occation. Sadly, as much
as I'd love to visit him, Kansas city is a little far north of our
route at the moment (Sorry Kent.)
Well, I'll keep looking in here from time to time to see if there
are any Atarians to visit on our trek. Take care!

Mario Becroft at http://www.ak.planet.gen.nz/~mario/ sells an adaptor which will allow an IDE drive to be fitted to an ST. The driver is $NZ150, which is around 50 pounds, plus postage. On top of that, you have the cost of a drive. Using Mario's adaptor a 2.5" laptop drive can be fitted inside the STe's case, or you can use a free standing unit outside the case. The adaptor fits in the cpu socket and comes with an upgrade to tos 2.6

Ditto.

Heck, the guy maintaining the list might be your neighbor (he's in Guelph).

> Hopefully this situation will be rectified!!
> btw, not into anarchy, eh?
> you are into the wrong computer mate! :-)

The Mac or the TT?

For me it depends on which government is currently in session. Sometimes there's parallel anarchy going on, since MagiC and Mac OS share many of the same ideologies. Windows as a third faction would only lead to more civil unrest and reinstalls. (Mind you, every government strives to get reinstalled.)

> glen clark for prime minister!! ;-)

I wouldn't "gamble" on it.

My CD-ROM drives are 3 x Pioneer 6 disk changers. So even if HDdriver
didn't detect and acknowledge the drive that can't be seen, the CD-ROM
drivers do.

I use ExtenDOS Pro which is fine for reading. To write to a CD-R/W you
will need software that does it. ExtenDOS Gold, is a writing package (I
think), and I presume that this would also work the same way!

I still find it strange that all software I have tried, even just using
the ID check, HDdriver is the only one that loses devices!!!!

3459. STING setup

Newsgroup: comp.sys.atari.st
Date: 1999-08-21 00:00:00 UTC
From: paul_mc@atariste.freeserve.co.uk
Message-ID: <7pm9nl$n1b$1@news5.svr.pol.co.uk>
Source record: 74435

Hello all ,

I'm trying to setup STing on my Falcon but am encountering
difficulties. (audible moans :))

When I dial up my ISP the dial script works fine until where on my STe
it would 'resolve the host' on my Falcon it says that it has 'failed
to pass the connection on to STING'. And hangsup.

However STing is installed and activated from the CPX. The setup is
copied from my STe , is there something I've missed?

thanks for all replies ,

Paul

and
> unpaid - tempting offer eh?

I'm very sorry to hear about these problems - I hope everyone recovers eventually. You've made a great job all the time, giving Atari users around the world a very readable magazine. It's very sad news indeed to hear that AC will be discontinued - but I fully understand about the family problems - I've had similar experiences myself due to too much work, so I have much sympathy for you. You can't allow something that's not _extremely_ profitable affect your life too much, then it's absolutely the correct decision to quit. You must have time for your family and friends to feel good and to be able to continue being creative - and you must be able to do 100% of nothing at all from time to time, otherwise you'll go nuts in the long run...
Good luck with the work on the final issue - I'm sure you'll make it the best one ever! :)

Best regards,
Claes

> Steve <>< * * *

Yes. I think it must be ,

I've read the hyp file ,and the port problem with the Falcon is
mentioned.

I downloaded the latest STing , and set it up again , and this time it
hangs on 'Connected...'
I've set the dial.scr to modem 2 , but can't find anything to change
in the STing setup , is there an option I've missed?

Do I need to activate a port in the sting port cpx? When I try and
activate Modem 2 I get a 'Activation of port 'modem2' failed! '

Are there any Falcon owners out there who have had a similar problem?

thanks

Paul

Whitch SCSI interface do you use on your atari?

> so much (if you believe the specs !!) but it cannot see a CD unit
> from 2 years ago !!!You have to pay for this soft and then you'll

You allowed HDDriver to "see" CD devices?
SCSI ID of your Yamaha is switched ON in HDDiver setup?

> find this, which the tester at the shop couldn't explain.He told me,
> there was nothing special at this Yamaha, just plain ordinary SCSI-2 !

Right, itï¿½s a normal SCSI device.
Nothing special. PARITY and TermPWR ON on your SCSI chain?

> I hope more people react and I hope Uwe Seimet will react too, for
> this Yamaha is a very well sold unit, i even read on the Internet
> that you can easily tune it up to CDR 400, by removing just one
> little resistor !!

Yes, but i donï¿½t know this modification work on all 200 devices.
Last but not least: Whitch software do you have for wrot a CD?
Whitch software do you have for read a CD?
ExtenDOS Gold?

HDDRiver only "see" the device, but you canï¿½t read/wrot any CD.

Some sites rely solely on scripts to work. The only HTML code is the

> >There's really no need for that....
> >You have over 95% chance to connect to your ISP, without having to worry
> >about script files.
>

Zetnet are a bit odd, inasmuch as they seem to have more passwords, usernames and account numbers than is sensible. It does, at least, mean that your account is a bit more secure, but it can make it a PITA when trying to work out the login script you need. I can't help with the specifics of IConnect, but I connect (No pun intended) using an Apple Newton and the following script, if it helps:-

Login Script: [14 Step(s)]
Send ♦
Wait For: "ogin"
Send: "ZETppp"
Send ♦
Wait For: "ame"
Send: "[Full Username From Registration Cert]"
Send ♦
Wait For: "umber"
Send: "[User Number from Cert. In the format of xxxx-xxx-xx (probably)]"
Send ♦
Send: "[User ID from Cert: 100xxxxx (possibly)]"
Send ♦
Send [Password]
Send ♦
Done

The bits in [square brackets] will have to be set to your own specific values.

Hope it helps,

Xav

Mikey <sandcat@ridgenet.net> wrote:
>Not to be funny, but I think it has to do with big and little
>indians:).

As long as you're using the VDI, the indians are all taken care of. ;-)
They can cause problems for programs that access the screen directly,
though, unless they take the proper precautions.

>> I've installed an Eclipse and I've got some wierd problems...

I've been in contact with Chris and I think the problems have been
straightened out. Right?

>> Firstly Although we've now got it working hardware wise theres some sort
>> of software glitch ....It doesn't come up with the right colours on the
>> desktop, ...everything is the wrong colour....Apparently this is a

Something similar happened earlier during the development on one
machine, but after talking with Chris it seems like his problem was
actually a new one.

>> fix was....it is a software issue though, the hardware is working fine and
>> apart from the colour problem it is pretty good....it's a lot faster than
>> normal....and then you realise it's doing it at 1024x768x16-bit.....

:-)

>> Secondly ....The colour mismatch is affecting my <normal> desktopp
>> too....it is currently bright pink...I've looked at the colours CPX and

This was very strange and I don't have any explanation as to why it
might have happened. I think Chris has gotten things to work now,
though. At least it was a while since his last email.

>> Thirdly....how do I get a 1280x1024x24-bit mode out of the Eclipse...

Right now there is no support for 24 bit modes, but the 32 bit ones will
(like on every graphics card I know about) only use 24 bits for colour.

The main reason there's no 24 bit driver is that the mach64 2D engine
in the RageII chip doesn't really support hardware acceleration for
that mode. The engine can do some things using a pseudo 8 bit mode,
but others have to be done by hand, which would be _very_ slow.

If there is significant demand for it, I'll give it a try (or perhaps
someone else wants to? ;-), but I really doubt it's worth the trouble.

1152x864x32-bit should work, but just as for the mode you want, you'll have very little free memory on the card. That means that the caching mechanisms won't work well (or even at all) and you don't want to move large amounts of 32 bit data to and from the card very often.

Do you mean just downloading the headers, and then selecting which ones you
want to download in full? If so, NEWSwatch can do this already.

I cannot seem to get GemView to work under MagiCMac, it doesn't
recognise any image - I've used the Mac's Graphic Convertor and saved
images in JPG, GIF, IMG, TIF, etc.. but none work! I've got the same
configuration as the GemView on my Falcon and this works perfectly.
Also(!), I cannot get ANIPlayer to run on the Falcon under the MagiC 6
OS, but it works fine under MagiC Mac! :-)
Any ideas? Thanks.

Hi Bob,

Personnaly I have always liked CAB so I was saddened when I heard that Alexander had given up on its development, surely he is now making enough from iCab to plough a little of the development back-into CAB?

Anyway, I thought I would give Wensuite (demo) a try. I tried LoA a short while ago and couldn't get it to connect to my ISP (anyone else succeeded with Zetnet ?).

No such problems with Wensuite, after the opening dialog boxes it opens two windows and the menu bar then locks-up requiring a re-boot. This suggests that it doesn't work under Mint/MultiTOS. Maybe it would be better with Magic-Milan but I cannot check that option.

I am not having a go at OXO, I just wanted to report my experience. Hopefully if more of us try the demo we can help OXO iron out the bugs and improve the application which is what we all want, surely?

If I can get a working Wensuite demo I might be tempted to buy it, so any feedback would be welcome.

Peter

Hello Al

On 14 Aug 1999 09:34:14 , Al Ferrier wrote:

>As a practising ST-based muso, I've recently been considering buying
>a second-hand Akai S700 sampler I've seen. As I've not much
>experience of working with samplers (but otherwise am well used to
>music tech), I'd appreciate some tips from any owners on the NG.

I have an Akai S-700 which I have had for many years, The operating
System is pretty easy to get your head around so as long as you obtain
the manual you'll have no problems.

>Don't ask why I'm not looking for something a bit more current - I like
>bits that the music world has forgotten! The S700 also has a special
>interface with an Akai VX90 analogue synth module which I also have,
>and as it's going relatively cheaply, I'm effectively killing three
>birds with the same stone.

One problem to look out for (which I found to my cost!) is that if the
disk drive packs in you've got a VERY expensive repair bill on your hands
as Akai have no spare drives left and the only place I could get one
was from Korg (who made a drum machine which used quikdisks) who had
two left. Also some mods have to be made to make the drive fit so test the
drive component carefully! This cost me £110 for the drive and £75 for
the fitting - not including carridge to and from the repairers!

An expansion board for the Akai S-700 was available years ago (ASK-70)
which expanded the voices from 6 to 16 and is great. Also an output
connection cable (VWx6) could be fitted. This channels the voices to 6 jack
sockets so you can treat the sounds individually.
I also purchased some dedicated editing software called 'Soundfiler'
by a company called Drumware which I find great for 'cleaning up'
samples etc. Unfortunately you would have to buy this second hand as I
don't think the company exists anymore(?) (it is dongle protected via the
joystick port so for musicians it is ideal). There may however also be
compatible non-generic type editors available if this isn't an option.

>I'm also looking for samples and would like to know whether there are
>currently any system upgrades around for it or samples on the Net. If
>you are the owner of an Akai sampler, particularly an S700 or X7000,
>maybe you could give me some advice?
>I know the S700 takes Quikdisks - does anyone know of anywhere that
>still supplies these? I gather there may be one in the back pages
>of Sound On Sound magazine.

I personally don't know of any library but sample CD's are a good bet - when I first bought mine there were only 4 CD's available but now there seem to be hundreds. If you find a source for the quikdisks let me know as I haven't been able to get any for years!

I can understand you wanting to keep the link to the VX90 but although I love my S-700 and would never part with it I think if I was buying now I would go for a second hand S-900/1000 as these seem to go fairly cheaply nowadays and have a lot higher spec and spares/disks are a lot cheaper than the S-700. But if you do purchase it (especially expanded) It is very easy to use and gets results quickly.

Anyway, I hope the information is of some help.

Best Wishes

Sean

> Any ideas? Thanks.

I donï¿½t know whatï¿½s wrong, use GemView 3.15 since years her perfectly.
Also with MagiC 6.10 / jinnee Desktop, and also with MagiCMac.

Macï¿½s Graphic Convertor saves -any- picture format atari conform, itï¿½s
realy easy to view it on falcon or with papillon/MagiCMac.

I used the standard installation of MagiCMac, jinnee, GemView.
No specials.

Regards, Robert

Pray tell...what is this resistor removal... I have a CDR200t (actually a tx cos it's external)....I would love a 4x burner... CBHD sees mione fine, HD-Driver on the studio one doesn't unless I enable the ID in the setup, but it works fine on CDRecorder Pro on both studio and home machines....Metados won't let me use it as a data drive (I get a tracklist sort of thing...) but it allows it as an audio drive with most compliant CD-Audio players...

I think you are crazy; I now know my bad experience with these guys will
not serve anybody.

> WHY ?????Cause we have to become the testteam of people (French) ,
> who dare to bring out a new Atari product !Let's give them all our
> positive advice, our positive and negative experiences

NEVER send any negative experience to them because:
-they won't believe it
-they will say that's your fault
-your configuration is wrong (even if you have exactly the same ...)
-they will never correct the bug the way it should be
-they think they are the best programmers ever ...

My taste and the taste of some Midi Comedie members who experienced very
bad things with Oxo, Oxo Concept and now Oxo Systems ...
Didn't you know that "oxo" is a french game ? They play it PERFECTLY !

>From: "omelette" <bonfieldd@breathemail.net>
>
>Hi,
> I also downloaded it and it bombs every time!
>I'm working with an enexpanded Falcon. How about you setup?
>

I just had a go at Wensuite 3.20 and of the latest LoA, but still, I`ll wait.
Either of them is not worth my money yet. Wensuite is fast, but does not show some pages correct, not my own startpage and it doesn`t even know how to "refresh" a page!
And it can`t init my modem, at least not yet. I have to fiddle some more to find out if this is correct.
Otherwise it looks promissing.

Light of Adamas is as mess,- no icons in the menuline,- ugly colors,- don`t show the websafe colors and it won`t show a page with frames,- not the one that I tested. It even frose my machine on some pages. And it comes up with a different window size when

I start again.

CAB is still the best, stable most of the time, even on some pages that give IE or NS some problems, from what I can read in some Danish newsgroup where they talk about webdesign.
One more thing that I think speaks for CAB 2.7, is it`s abillity to show most pic. files.
Even some that Gemwiev,- Gemtool,- Papillon,- Vision or Imagecopy won`t show, Havn`t meet those nasty progressive jpg files for some time.
I just want CAB to be a little faster when loading and showing images. And a few other

features.

cheers

Joergen

Hi folks, hi Uwe...

I'm not getting any reaction from Uwe Seimet, strange, cause last time I get a sort of automatic response, that Uwe was on holidays, but that was several weeks ago.....Well it's all about HDDRIVER, that commercially successfull program, which costs me a few bucks, but that won't see the ID of my Yamaha CDR 200t, which is a regular SCSI device.When you read the specs of this harddiskdriver, you won't believe your eyes, but reading the ID of my humble Yamaha is impossible. I don't like that, hope somebody will react, where Uwe went.....or what's the reason of my mysterious behaviour of the combination Yamaha/HDDRIVER !

Newsgroups: comp.sys.atari.st

Go to the motu site to the UNISYN download area. All those profiles
will work on XOR! Once you download for the synth(s) you have and
unzipped them, just rename the main profile's extention to .XOR and
the help file to .HLP. Put them in the main directory of your XOR prg,
and use the configure editor to load them into Xor.

Hope this answers your question!

I really love XOR..very user friendly compared to Soundquest!(the midi
exclusive from Hell!...but thats MY opinion!)

->Subject: [GAMES] Doom, Heretic and Hexen available
->
->There are on my website.
->Doom now has sound, using the sound server under MiNT. An interrupt
->routine is planned (to get sound under TOS).
->Heretic and Hexen work (Hexen is slower than Doom and Heretic).
->Sources are available.
->They should work on TT (320x480x8 bits mode).
->
->--
-> Patrice Mandin
->
->Mail: pmandin@caramail.com
->Web: http://www.multimania.com/pmandin
```

Subject says it all. I've never, ever, ever been able to go
to Patrice's web site and download a file. I get transfer
rates like "47 cps", and multiple time-outs. Can anyone else
please grab these 3 files and post them to someplace like
the Belgian FTP site? I get very good transfer rates from
there... Thanks!

HDDRIVER isn't a CD-driver. You should have a dedicated driver for the CD. Compare with this: A busload of tourists from different countries are taking a tour to see the city, but some of them speak only German, some only English, some speak both German, English and French.

To be able to communicate with all the tourists in the bus you have to speak several languages. In the example above you'd have to speak English and German.

Harddisks and CD:s can share the SCSI bus, but this doesn't mean they can be "spoken to" in the same way. Unless newer versions of HDDRIVER are explicitly supporting CD:s you need to use a separate driver for the CD. I'm using CDTOOL, the sister program of SCSITOOL.

Source record: 74307

Al, Sean and others-

I don't know about the s700 but I have both an x7000 and an S612 so have some experience which may enlighten you. The X7000's disk drive is kaput and just runs permanently. People have indicated that it is likely "just" a broken belt but I haven't had the inclination to crack the box open to look (actually tried half-heartedly and gave up...). The S612 has worked okay but I did have a couple of times when it wouldn't read the discs properly.

Anyway, this Quickdisc technology is pretty crappy and for me the best way to use these boxes is live, on-the-fly playing around with the filters and (at least on the s612) the editing sliders!

Also, happily, there are Atari programs which can be used to edit the sounds and so skirt the drive issue. Soundfiler ST is a good one and I believe the Superlibrarian package (a universal editor/librarian can also work with at least the s612 and probably the others.

Another good thing to know about (a VERY good thing) is Danny McAleer's Electronic Cow software:

http://dspace.dial.pipex.com/electronic_cow

Specific to your situation is the fact that most (all?) of Danny's commercial sound creation/manipulation titles can send samples to the s700 by some version of sysex dump (not quite MSDS). The FREE program he has called "Wave Dumper" can send .wav files to your machine.

http://dspace.dial.pipex.com/electronic_cow/freebies.htm

I highly recommend Danny's software to you based on your (Al's) self-description...

"Rich" (below) is correct about the Smith Corona disks, although I don't know if that brand is sold in the UK, good luck.

Rick Brown
rbrown@ymail.yu.edu

~~~~~~~~~~~~~
From: "Rich" <progmon@eden.com>

Smith Corona, yeah they make electronic typewriters, sells quick disks in 2 paks in office supply stores, or at least they used to. There was a program on the atari that used to edit s700/x7000 samples called Soundfiler. The sound quality was nice in these old Akai's, but they maxed out at 1 meg.

Hi Bob,
Sorry for not replying any sooner, perhaps the problem is already solved?
>I followed Dennis's 'simple approach' advice. Nowhere! I then copied out
>the wait/reply/wait/reply sequence in dial.scr. Still nothing.
Well, this is annoying

Let's try following approach:
Enter your ID ,Password en IP's telephone in dialogbox Account.
Go to dialogbox login and enter the following:

Wait for : *&Gx9(&dDEa
Send string: ZETppp
Wait for : Name
Send string: You're name here :-)
Wait for : N
Send string: ****-***-** (You're reg.number)
Wait for : m
Send User
Wait for : r
Send Password
Done o select PPP here

Wait Timeout 30 seconds
Restart Script 30 seconds

Knock on wood, and try to connect......:-)
Don't bother about any other parameters for now, just make sure that the ETC
path is set correctly. Once you're connected we'll fine tune the beast.

This IP is a bit of a strange one, it seems to expect three parameters, most
ISP are content with just the ID and password.
I haven't the faintest idea what the *&Gx9(&dDEa bit stands for :-(

Cheers from Belgium
Dennis

>Always appreciate constructive criticism like yours, dude.
Dude? oh boy this makes me feel twenty years younger, thanks Richard.
If you appreciate constructive criticism you must try to accept some
negative input from your customers, just the same.

>UVK has always worked under Magic provided you keep the SHIFT keys
>pressed during loading. It's the system status screen that goes wrong.
Yes, I know this by now. Personally I don't care what goes wrong, it
shouldn't, not after all this years of updating/upgrading the UVK.
BTW: the system status screen is a vital feature of the UVK, so what
you really are saying here is that the UVK is crippled when running
under MagiC. Did I say running? sorry, make that "trying to run"

>This thing with the SHIFT keys is in the manual. Read it next time
>please.
Hm, Is it? Where? I can't find it...what section? Known Bugs? Perhaps
it's written with invisible inkt? I have the original version 5.0, that
explains it, MagiC wasn't even around in those days. Since version 5.0
I've bought a whole bunch of upgrades, 13 to be exactly, just a disk,
no manuals not even a piece of printed toiletpaper. IIRC (this is going
back in to history quite a way) the UVK was supposed to be compatible
with MagiC from 1995 onwards. I write *supposed* here, because it
wasn't.
The UVK has a long history of upgrades/bugfixes, every time a new
feature was implemented it took a couple of versions to get it right.
Remember the CPX, that destroyed the bootsector? The version that went
berzerk when a lharc file was detected? the version that kept insisting
that the Protar HD Driver was a link virus?
In the meanwhile me and a lot of other idiots kept on paying you. I'm
the faithfull type: I've upgraded until version "ACN Final Viruskiller
2000" about a year ago. I'm not complaining about the UVK itself, if
one disables MagiC, it works like it should.

Jos is right, you should have fixed the bug, it is a bug, don't tell me
this is a feature. Is there a programmer reading this? Please be so
kind to help Richard out, he obviously can't do it himself.

>By the way, UVK was freeware until 1988, then commercial until early
>this year. Now it is shareware. Get your facts right next time please.
until 1988? nice try Richard :-))
UVK was a commercial program from day one, what you mean is the "Virus
Destruction utility" that later became the UVK. Read the manual you've
written yourself. I might be getting older but I'm not senile (yet)

Cheers from Belgium
Dennis

Hallo Jos,

does
JV>but that won't see the ID of my Yamaha CDR 200t, which is a regular
JV>SCSI device.
mean that even HDDRUTIL's IDcheck won't find your CD writer?
Did you try to "show" (selected) its ID to HDDRIVER.SYS? Normally the
IDs may be "hidden" (deselected).

So, if hidden, the drive nor being found is quite normal. And please
remember: Your writer is *not* a disk drive, but a CD reader and
writer.

Try in HDDRUTIL the (4th) menu "Einstellungen" and then
"Gerï¿½tekonfiguration" (7th selection). I'm sorry I can't give you the
English words, but I hope you will understand the German expressions.

What about METADOS and an appropriate CD driver? That should at least
"find" your drive as a reader. To find it as a writer you will need
writing software.

And Uwe himself recommends to hide all non-disk devices from hddriver!

Peter

3526. Anyone have the interface spec for a Computereyes?

Newsgroup: comp.sys.atari.st
Date: 1999-08-23 00:00:00 UTC
From: trisoft@realtime.net
Message-ID: <37c0add0.0@feed1.realtime.net>
Source record: 74386
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have an old (very old) ComputerEyes for an Atari ST-520. I also have a need to digitize some static NTSC video on a different machine.

Does anyone happen to have (or know the whereabouts) of the interface spec (pinouts, signal catalog, etc.) for this beast? It plugged into the ST-520 "option" port on the side of the keyboard.

I know, it's probably easier just to buy a video card for the other machine than it is to rig an adapter and write a driver. But I hate to see working hardware go to waste.

Thanks for any pointers...

There is a game called World Conquest that is available on the
umich atari archive (as well as most others probably). It's almost the
same game except for the fact that it runs in any resolution. (Well at
least non standard resolutions) been awhile since I've played it so I'm
not certain how it does 16bit color. But in a planar mode you can run it
quite nicely on a Falcon etc for certain.

No that is not so strange. I have had the same thought sometimes.
With French software I found (already many years) trouble with
fileselection in all forms.
First it seems French TOS allows other characters in filenames then
standard UK-DOS .
Second: I have seen may Fsel boxes coming up with 'selection nearly
ready' mode with pathnames of the kind : C:\\fold\namm.txt
or: D:\cra\cra\cra\cra.txt
Thirdly: setting those strange paths OK makes sometimes no
difference: behind the screens the 'old' path is inserted.

Finding Wensuite making empy folders e.g. is not an astounishing fact.

Met vriendelijke groet,

3531. [GAMES] Doom, Heretic and Hexen available

Newsgroup: comp.sys.atari.st
Date: 1999-08-23 00:00:00 UTC
From: Patrice Mandin <pmandin@caramail.com>
Message-ID: <7pr30j$mp1$1@nnrp1.deja.com>
Source record: 74391

There are on my website.
Doom now has sound, using the sound server under MiNT. An interrupt routine is planned (to get sound under TOS).
Heretic and Hexen work (Hexen is slower than Doom and Heretic).
Sources are available.
They should work on TT (320x480x8 bits mode).

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st,maus.computer.atari.hardware,fr.comp.sys.atari

For those with access to PAL or GAL programmers, here are some hard to find listings for producing replacement parts when the Atari supplies have dried out.

3533. Re: Superboot and Y2K

Newsgroup: comp.sys.atari.st
Date: 1999-08-23 00:00:00 UTC
From: Steve Stupple <Steve@atari.org>
Message-ID: <J6iExGA1ATw3EwXk@steverosie.demon.co.uk>
Source record: 74393

On Sun, 22 Aug 1999 at 22:31:15 a message from Alyre Chiasson was
created on the subject of Superboot and Y2K.
>Having scanned the web for info on Atari computers and Y2K I came across
>the statement that Superboot was not Y2K. This program has served me
>well on my MEGA STE for years. However, I am now wondering with what
>program I can replace it? Any suggestions? Rolling back the clock is not
>an option as I want my files properly dated. Must work on a MegaSTe.

Hi

I gave up Superboot a while ago, I now use Xboot. It doesn't have all
the ribbons and bells Superboot has, but is dead easy to use and you can
have lots of boot up defaults.

You can also have 3 files that can be moved to the root of your boot
drive and can be different source in every config. The files I use them
for are: desktop.inf, newdesk.inf and assign.sys.

3534. Re: Golden Image Scanner-probs

Newsgroup: comp.sys.atari.st
Date: 1999-08-23 00:00:00 UTC
From: Steve Stupple <Steve@atari.org>
Message-ID: <A67GhIARKTw3EwW9@steverosie.demon.co.uk>
Source record: 74394

On Sun, 22 Aug 1999 at 20:32:33 a message from Paul Mac was created on
the subject of Golden Image Scanner-probs.
>hi all ,
>
>Is anyone running the Golden image Scanner successfully on an STe?
>Using the touch up software?

Yes:) I know several, and then there's myself:)

>
>When I scan the scanner does initialise but after what appears on
>touch up is merely a jumbled mess.

That doesn't sound useful.

>
>any ideas?

I know this may sound like a silly question, but have you read the
manual! There is a light on the scanner which gives an indication that
you are scanning too fast.

If you try scanning faster than the software can cope with, you can get
a messy scan.

The scanner is a pretty reliable one and is a doddle to setup.

(1) switch Atari OFF.
(2) plug cartridge in port.
(3) plug scanner and power into the cartridge.
(4) switch on Atari.
(5) run software and scan an image.

If you still can't get it going, drop me a line at:
Steve@steverosie.demon.co.uk (as atari.org is still down)

or give me a ring on 0870 7402518 (at national number rate) and I'll set
my Mega STE ready for a scanning session. I can then go through a scan
with you on the phone.

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 08/24/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection is currently on-line! Unfortunately, there is no
list for this system (cartridge and CD based systems only).

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped! Includes box and manual]:
$ 4.00 Advanced Dungeons & Dragons: Heroes of the Lance (SSI)
$ 4.00 Alcon (Taito)
$ 4.00 All Aboard! (Terrific Software)
$ 4.00 Arkanoid (Taito)
$ 4.00 Art & Film Director (Epyx) -- $4.30 shipping, due to
weight, counts as 1st item
$ 4.00 Art Library 2 (Melody Hall) -- RIPPED SHRINKWRAP!
$ 4.00 Battleship (Epyx)
$ 4.00 BCPL Compiler (MetaComCo) -- RIPPED SHRINKWRAP!
$ 4.00 Blockout (California Dreams)
$ 4.00 Bobo (Terrific Software)
$ 5.00 Bubble Bobble (Taito)
$ 3.00 California Games (Epyx)
$ 4.00 Championship Wrestling (Epyx)

$ 4.00 Cyber Print (Antic Software) -- NO SHRINKWRAP!
$ 3.00 Death Sword (Epyx)
$ 2.00 Devon Aire in The Hidden Diamond Caper (Epyx)
$ 4.00 Dive Bomber (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 4.00 Dynasty Wars (Capcom)
$ 4.00 East vs. West Berlin 1948 (Time Warp)
$ 4.00 Eliminator (Hewson)
$ 4.00 Emperor of the Mines (Impressions)
$ 2.00 Final Assault (Epyx)
$ 4.00 Forecaster III (Greg Kopchak)
$ 3.00 GFL Championship Football (Gamestar)
$ 4.00 Golden Path (Firebird)
$ 4.00 Goldrunner II (Microdeal)
$ 4.00 Hyperdome (Exocet)
$ 4.00 Jupiter Probe (Microdeal)
$ 4.00 Keith Van Eron's Pro Soccer (Microplay)
$ 4.00 L.E.D. Storm (Capcom)
$ 2.00 Lands of Havoc (Antic Software)
$ 4.00 Last Duel (Capcom)
$ 4.00 Leander (Psygnosis)
$ 4.00 Major Motion (MichTron)
$ 4.00 Man Hunter: New York (Sierra)
$ 4.00 Man Hunter 2: San Francisco (Sierra)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 3.00 Metro Cross (U.S. Gold / Epyx)
$ 3.00 Paint Pro (Abacus Software)
$ 4.00 Phantasm (Exocet)
$ 4.00 Powerstone / Elf Lord's Magic (Starsoft)
$ 2.00 Prime Time (First Row)
$ 4.00 Professor Craps (Scorpio Systems)
$ 4.00 Project Neptune (Epyx)
$ 3.00 Quadralien (Spinnaker)
$ 4.00 Rambo III (Taito)
$ 4.00 Red Lightning (SSI)
$ 3.00 Renegade (Taito)
$ 4.00 Rick Dangerous (Microplay)
$ 4.00 RVF Honda (Microplay)
$ 4.00 Savage (Microplay)
$ 4.00 Slayer (Hewson) -- NO SHRINKWRAP!
$ 4.00 Space School Simulator (CRL Group)
$ 4.00 Star Quake (Terrific Software)
$ 4.00 Starglider (Rainbird)
$ 4.00 StarRay (Logotron Recreation)
$ 4.00 Stunt Track Racer (Microplay)
$ 2.00 SwiftaR (Accustar)
$ 3.00 Techno Cop (U.S. Gold / Epyx)
$ 4.00 The Advanced OCP Art Studio (Rainbird)

$ 4.00 Typhoon Thompson: Search for the Sea Child (Br0derbund)
$ 4.00 Warship (Strategic Simulations, Inc.)
$ 3.00 Winter Games (Epyx)
$ 4.00 Wizard's Crown (SSI)
$ 3.00 World Games (Epyx)
$ 3.00 World Karate Championship (Epyx)
$ 4.00 Zero Gravity (Microdeal)
$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.20 for the first game and $1.10 for each additional game. Shipping for hardware and accessories depends on weight/distance. Large orders will be weighed as a package, to reduce shipping costs. Foreign orders welcome.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

3542. Falcon questions...

Newsgroup: comp.sys.atari.st
Date: 1999-08-24 00:00:00 UTC
From: omelette <bonfieldd@breathemail.net>
Message-ID: <37c3240c@news1.vip.uk.com>
Source record: 74252

Hi,
I've finally got myself a Falcon which I think is great but am having problems with the sound. Running programs that are supposed to be Falcon compatible (Zero-5, Desktracker, Back-track etc.) result in silence though the keyclick and a demo I tried produce sound. Any ideas? Also, is the original 60M IDE drive known to be unusually noisy? Mine goes through random 'grinding' phases though it has no bad sectors. All help appreciated.

Thanks in advance.

3543. Problems in Atariland???

Hi All,
Freshly uploaded to MagiC Online is an interview with Sven Kopacz, the guy behind Emailer, Iconnect/Iconf, DeskDrop, Alice, etc etc.
Anyways, you can read it at:
http://thor.prohosting.com/~bengy/interviews/sven.htm
I ask him the usual stuff, you know, his history, future etc. Why he made iconnect when there was already stik/mintnet, why he made emailer magic only..

Remember, Atari.org is still down, so you must access MagiC Online at it's temp. backup server, http://thor.prohosting.com/~bengy/

Take Care,
Bengy
PS: It's my 18th birthday on August 26th, (!!!) so i'm going away until Sunday, Please be patient with email responses.

Interesting. Will it work with Vassilis Papathanassiou's port of MiNTnet to
MagiC? If so, we may yet be heading towards some standardisation, at least
for multitasking OSes (cue cheering!).

I have the Rev. 10 catalog. In it on page 27, the Mega STE keyboard is listed as new for $150 or reconditioned for $90. It also lists as new "Special limited Buy" for $110. But since I got the catalog back in January '97 I doubt the $110 price offer is still available.

The address I have for Best Electronics is:
2021 The Alameda, Suite 290
San Jose, CA 95126

Best might have a webpage. The address I wrote in my catalog back in Jan. 1997 is,

http://www.best-electronics.ca.com.

good luck,
mark

3552. Nemesis Indicator v1.0 released!

Newsgroup: comp.sys.atari.st
Date: 1999-08-24 00:00:00 UTC
From: Daniel Hedberg <d.hedberg@swipnet.se>
Message-ID: <WCkw3.9511$7d.17377@nntpserver.swip.net>
Source record: 74318

Nemesis Indicator is a small memory resident program for Atari Falcon030 compatible computers equipped with the Nemesis accelerator from Titan Designs Ltd. It displays the current Nemesis state (16/32, 20/24, 24/48) in the upper right corner of the screen. It also allows the Nemesis state to be changed by clicking on the mouse buttons while the mouse cursor is within the display area.

Get it from http://home.swipnet.se/newbeat/

All the best,
Daniel Hedberg

>an option as I want my files properly dated. Must work on a MegaSTe.

The statement was possibly the one on my Y2K page. As far as I know, the
problem only affects the time and date setting functions of Superboot,
everything else is OK. So as you are probably not using the date and time
functions (the MSTE has an internal real time clock, I think), you probably
won't have a problem. If you are using Superboot to set the date and time,
you can probably get round the problem by stopping using that bit and
setting the date and time using something else.

Probably the TAF distribution, though I think it was 10 floppies! It had the distinction of being the first graphical browser on this platform (though it suffered from not having enough memory to be stable on a 4Mb ST).

Monochrome only, too, as it relied on X which wasn't a version with colour support.

3555. which atari system to get ?

Newsgroup: comp.sys.atari.st
Date: 1999-08-24 00:00:00 UTC
From: covenant_666@my-deja.com
Message-ID: <7pt2gq$64c$1@nnrp1.deja.com>
Source record: 74321

i*m able to get these 2 atari systems for nearly nothing .

mainly i want to play games (i can get the large software collection from a friend , a lot of classics included) .

i dont want to buy a standard st cause i want more power to play games , demos , etc . best quality possible .

i*m aloso interested in compatibility questions (can i play old st games on a falcon without probs ?).

system one :

atari tt030 ,orig. Atari 10MB ram extension card plus Mighty-Mic 32 mit 32MB RAM (8x4MB SIMM Modules), 2x 3.5" Floppy 1.44MB, DDD Big-Tower, 1 GB IBM SCSI-Festplatte, SuperNova Grafikkarte up to 16,7 Mio. colors, manuals , books and a lot of software , connectablto to every vga monitor.

system 2 :

Atari St, 4MB, Crazy Dots Grafikkcard, SCSI Harddisk, in 19" Racktower ext. power supply, ext. keyboard, 14" Sony Multiscan Monitor, without cooling device just Studio using.

any help would be great . please respond to : covenant_666@hotmail.com

You may not be surprised that I know of *none* of these errors. Nobody ever
told *me* about it. That's what you get if you tell other people about the
errors, and rely on them contacting me. They didn't. If you'd like to get
down to business, email me please with a bug list (at cronos@fortysecond.net)
and I'd like to get rid of whatever bugs still linger.
As to the system status screen: The bit that goes wrong is the code that
looks for your memory configuration It's written by H.W.A.M. de Beer (of

"SysyInfo" fame) and he doesn't support it anymore. I cannot fix that. So use the SHIFT keys to avoid it.

>In the meanwhile me and a lot of other idiots kept on paying you. I'm
>the faithfull type: I've upgraded until version "ACN Final Viruskiller
>2000" about a year ago. I'm not complaining about the UVK itself, if

>Destruction utility" that later became the UVK. Read the manual you've
>written yourself. I might be getting older but I'm not senile (yet)

Go ahead and quote me on that. The program didn't become commercial until spring 1988, April to be more exact. The program was first released in December 1987.
I am surprised to know where you get the idea that you know more about how I distributed the program than me myself.

Dennis, for crying out loud, contact me instead of this childish flaming. I'd love to fix those bugs. Tell me about them.

Most games and demos won't show a big speed increase if run on a faster system. Also, most games will not install on a HD, will not make use of over 1Mb of Ram, and will only run in ST low resolution. The best system to play games on is definitely a good old 1040 STE., and it is expandable if you want to get more serious.

> i*m aloso interested in compatibility questions (can i play old st
> games on a falcon without probs ?).

This is a problem. Most ST games need to be run under STE emulation on the Falcon using Backward III or some other STE emulator. Some games will not run at all.

> system one :
>

Definitely no use for games. 99% of games will not run on that system, mainly because of the graphics board, the TOS 3.0, etc...

> system 2 :
>

Same here, pretty much overkill for what you want. As I said above, if you are only interested in games, a cheap 1040STE with a colour screen and joystick is all you need. Anything more powerful will either not run or not be used.

Hi!

My mate has aquired (don't ask!) an old ST,, one of the ones with a separate power supply in a little box. Only thing is the lack of the mains adaptor! The connector is a 7-pin DIN plug. Can anyone help me with the pinout of this connector? I've tried looking at FAQs and web searching, and have found every connector but that one!

Help!!!

Cheers,

Laz

Old thread, but... I just wanted to point out that Frank Naumann
released a beta-version of his MiNT-Net<->Draconis bridge yesterday, so
now you can run Draconis-clients under MiNT-Net as well. And like
GlueSTiK it's free.

Not really... Most people I know have Windows at work, since
this is what's required, and surf during their coffee break,
hence the count. As an example, my own TT faq counted just
about equal numbers for "others" than for IE or Netscape,
which would suggest real TOS machines on the surf.

Yes, by DIN 7P pin numbers it goes like:
1 +5v @3A
2 not connected
3 Ground
4 +12v @0.03A
5 -12v (?? probably not used)
6 +5v
7 Ground

The duplicated +5v and Ground are to make sure the current capacity is high
enough over the cable and connectors.

I think you can ignore the -12v line.

Source record: 74336

Hi, I want to take screen shots of my old STOS games & put them on my web site. I have a 4mb STE - what software will I need?

I'm thinking maybe a screen capture, which will save to pc1(?), then a converter to make .gif. Is there any pd software I can download that will do this? I have most ST Format cover disks, is there any software on this that will do the job?

Thanks for any help,
Simon.

Bad news for you: I've checked XBoot and noticed, that it is NOT Y2k
compliant: set the clock to 1.1.2000 or later and then try to create a
new set - Xboot will crash. It's a pity cause I like Xboot too. Have a
look at TUBS, it will also do good work.

Source record: 74195

Hi Bob, :-(

Knowing when to throw the towel in the ring, is a sign of finally
reaching wisdom..... well I just threw the towel. :-(

I've had a look at the script for znet which you mailed me, and I'm
afraid that with the current IConnect you should forget about connecting.
Even if the script that I posted here monday works, You'll still have a
lot of problems to solve.
Supposing the script works, and you get connected. You'll be able to surf
the net. When you want to use the emailer or newgroups, then znet expects
once again your three ID's to connect you to their POP, SMTP and News
server. This is where I throw the towel.... there is no way to pass those
three ID's to zetnet with IConnect. So apart from browsing, that's all
you'll be able to do.

I'll get in touch with Sven Kopacz and mail him your script with the tree
ID's. Surely there must me more ISP's in the world who use this system.

Cheers from Belgium
Dennis

>
>Nah, on second thoughts I just delete it.....
Hey guys, this last bit was just me trying to be a bit sarcastic. I
didn't really mean that Atari produced a special machine for the
French. I know it has a different keyboard and a translated TOS, but
that's where the difference stops.

Ronald wrote on 23-08-99
>No that is not so strange. I have had the same thought sometimes.

>Thirdly: setting those strange paths OK makes sometimes no
>difference: behind the screens the 'old' path is inserted.
>
>Finding Wensuite making empy folders e.g. is not an astounishing fact.
You know Ronald, I have the same feelings and experience here. Ten
years ago there was a for that time very good wordprocessor called "Le
Redacteur", this piece of software had a mind of his own...
Ever played a French game? and tried to install it on the harddisk?
this small feat can only be accomplished by a real Frenchmen...
In more recent times PARX springs to my mind, they created some very
good drawing programs but yes you guessed, the programs have a tendency
to do exactly the opposite of what you want them to do.

Cheers from Belgium
Dennis

>reach of hand... I'll thank you forever. :-)

There's a misconception here about the NOVA drivers:
ComputerInsel has produced the NOVA Cards and written the drivers for them. Anyone who has a NOVA Card can upgrade to these drivers free of charge. The drivers can be downloaded from the NOVA BBS in Germany. Leave a mail in the BBS for Gerhard Huber and ask him for access to the upgrade section. If you explain that you a foreigner and that calling the BBS is quite expensive, chances are very good that he'll mail the drivers straight to your mailbox....

This only applies for NOVA Card Drivers. The Hades uses the same graphic card that is used in the SuperNOVA but ComputerInsel have nothing to do with these. For an upgrade you best get in contact with your dealer or try the Hades website.

Oh yes: The BBS can be reached at 00 49 9445 953 149 (after workinghours). Don't be put off by the telephonebill, if you prepare your letter offline, logging in, posting the mail and logging out can easily be done in less then 30 seconds, this doesn't have to cost an arm and a leg.

Cheers from Belgium

Jo Vandeweghe <dipching@ping.be> wrote on 22-08-99:

Hi Jo :-)))

>Third thoughts from me: avoid the guys from Oxo ... they like your money
>They already changed their company name three times ! (... to avoid to
>pay/reimburse old never delivered customers !)

Here's another thought:
Wensuite not working/working partly is nothing more then sloppy work from the programmers & softwarehouse. OXO Systems has been bashed and flamed in this newsgroup like no other softwarehouse ever before. Are we unfair? are we biased? I would think not. A product like Wensuite simply is not acceptable, not as PD and certainly not as a commercial product. Not everyone here has an upgrade key, I know at least two people who bought version 3.x. Talking about the upgrade key, upgrade from what? Version 2.4 never worked properly either. In my case it didn't even work at all. It's more then just selling a lousy piece of software. This is simply cheating the public.... Apart from the interface and the stack nothing works properly. After three years they've created a nice bubble, that will burst very soon.

I wonder as a consumer what my legal rights are against OXO Systems. They sell a piece of shit, knowing very well that it can't do what it is supposed to do. It's like bying a CAD program that can only manage to draw a circle and a box and then bombs.... Calling Wensuite a "suite" is misleading. Most of the functions are not implemented and the few that are don't work. Take a look at the RSC file, some of the "greyed" out options just don't exist. To implement these, they'll have to rewrite the RSC file. Knowing how fast these guys are.....

>NEVER send any negative experience to them because:
>-they won't believe it
>-they will say that's your fault
>-your configuration is wrong (even if you have exactly the same ...)
>-they will never correct the bug the way it should be
>-they think they are the best programmers ever ...
YES YES YES, six times YES :-))
Two years ago I've had the same experience with them at the Paris Atari Show. Looking back, I'm lucky I still have a nose. They nearly bit it off.

>> It will not work on your TT either, apparently it only works in the
>>minds of OXO Systems. Perhaps we're all stupid ?
>
>AS Martin seems to say, you and I definitely are ...

Well, lucky for us it's a non dangerous even pleasant form of stupidness.
OXO Systems should realise that the times have changed. We the users (the
silent grey majority) now have access to a very powerfull forum, yes this
newsgroup. In the old days when we got swindled, there was not much we
could do. If a program was lousy, it was up to the Atari magazines to
tell us so. This didn't always happen because of commercial involvement.
Now we have this forum, and we keep each other informed. Without this
forum a lot of people would have accepted some of the six points quoted.
We have moved on (Katherine!! are you reading this?), it's time they
realise this.
OXO Systems is not the only black sheep, there are more like them.
Regularly I've been complaining about R.O.M here in this group, they have
managed so far to keep the public waiting for a nearly three years due
English Papyrus...., promising it time after time. And just as with
Wensuite, some people here defend them, so yes Jo we're stupid.... still
better being stupid then being swindled I would think?

>> Give OXO a chance.
>
>Let's pray all together my friends "Give Oxo a chance" la la la la lï¿½re

It might, but since MiNT and MagiC's XDD-implementations differs quite a
bit it will need a rewrite. But the basic code (i.e. the
Draconis-"emulator") shouldn't require much work. The source is freely
available so anyone can give it a try.

You're wrong here. The latest ComputerInsel driver (2.67) works here on my
Hades equiped with a Mach 64 4 MB card without any problem at all.

However your story goes up for the ET6000 card. The driver for this card
was an addapted novaVDI done by Medusa.

Are ComputerInsel still in business?

I know that Don Schmidt in his post advised that telephone cable shouldn't
be used- probably there are good reasons for this, maybe he can explain them.

And yet, for over two years I have been using, without any problems,
a 1 metre- long extension for my Mega-ST keyboard, made of just such
ordinary telephone cable.

It is a 4-wire piece of cable with 4-pin connectors at both ends, bought
in a first telephone-equipment shop, for a trivial cost. This arrangement
can work because the outermost pins on both sides of 6-pin connectors
on Mega-ST keyboard cable are doubled +5V and Ground lines.

Best regards;

> Up to 6x the SCSI interface can manage.

Maybe you are wrong here because A LOT of CD Writers (even recent models)
don't accept to directly copy from an already existing audio cd ...
Let's have a look at the impressive Toast user manual list ...
Of course, for the moment I don't use my CD Writer on my Atari but as soon
I receive "CDWriter" from Anodyne things will change.

>>Ten: Go out, have a Belgium beer, enjoy life :-)))))

You also have to mention that Belgium is not only a beer country but
certainly an excellent mineral water country if not the best, I don't want
to make any advertising but let's try "SPA Reine" mineral water and you
definitely will become crazy of inner pleasures .... ah Belgium, when we
don't speak about chicken it's always a pleasure !
Hummmmmmmmmmmmmmmmmmm Schlorp ! Gloup ! Miam !

Cheers from home and best wishes from inner Tibet !

Hi Dennis,

yup, I am experimenting with Opera on my Winmachine. Having a hard time
with NS Communicator to fetch stuff for offline reading. I just managed to
get a test msg out, that was easily done... :-)

Must say, Opera looks nice, is rather slim and has lotsa options. Gotta
figure it out some more. Personally, I consider the chances of a port to
Atari small, but nevertheless, one could try and yell and see what happens.

Let's face it: everything on real browsers has been commercial here too:
CAB, Wensuite, LoA. CAB has become outdated, no longer supported. WS and
LoA, well, the discussion ain't over yet :-)

Anyone else here for a Opera port???

Well, you're probably right about Alexander. I sent him an e-mail asking him whether he planned to continue supporting CAB, and he replied with the following:

"Maybe if I have some time left. But currently it doesn't look like this would be the case in the near future, sorry."

Regards,
Alexander Clauss

~~~~~~~~~~~~~~~~~~~

So I guess until the other browsers become more stable (or until I switch over to a PC or MAC), CAB 2.7 will have to do.

3594. ICQ and IRC with STinG?

Newsgroup: comp.sys.atari.st
Date: 1999-08-25 00:00:00 UTC
From: Nurmix@NO_SPAM_MEsocal.com
Message-ID: <7q1hoh$291l@enews1.newsguy.com>
Source record: 74210

Perhaps this has been covered here in the past, but I'll ask anyway:

I've been using my Falcon with STinG (and before that, STiK) for quite a while now, running CAB 2.7, NEWSie, POPwatch, POPGEM, MGFTP, and others. However, I have no experience at all with the newly available ICQ program for Atari, nor the various incarnations of IRC.

I'd like to get into both of these on my Falcon (under STinG of course), but I'm not sure what to get as far as the actual apps. And also, are they fairly easy to set up (keep in mind that while I've been BBSing and on the 'net for years, I don't use a PC and for one reason or another, never tried IRC or ICQ).

Any help or suggestions appreciated!

Last Updated 08/25/99
- Sold items removed
- New Hardware added

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST - Boxed with power supply and mouse
- Atari Mega4 ST - Boxed with keyboards/mouse/power supply
- Atari SC1224 Monitor 13" ST Color Monitor
- Atari PCT1426 Monitor 14" High Resolution TT/PC Color Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supply and Laser Printer Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supply
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Atari 5 Volt Power Supplies. Model C061982. 7 Pins.
- Magic Sac 1 Mac Emulator Cartridges (with manuals, NO ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 2x Wico Joystick (Black handle with grey base) - for Atari & Commodore

units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore
units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, &
software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, &
software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals,
software - NO ROMS or cartridge)
- AtariWorks - by Atari (with manual and software (unopened))
- MidiMaze - by Hybrid Arts (Complete with packaging, manuals, & software)
- Flash Telecommunications package (Complete with packaging, manuals, &
software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by
Motorola

Manuals & Technical Guides (software status specified) Please make an
offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari
(with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without

software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

It doesn't crash here (Falcon/Afterburner, MiNT 1.15.3b, N.AES 1.2), but
it's *extremely* slow when loading images, and the worst part is that it
blocks too. So unlike CAB I can't scroll and surf while it downloads
images.

Hi,

I would like to use the program ST-GUI15 to read the docs
to StinG and CAB.
Unfortunately ST-GUI15 docs are in German.
I found a German to English Translator at a site.
When I access the site, I am in Gopher:
The site index labels the program as xlator2.zip
When I get there it looks like this:
[INLINE] xlator2
I right arrow xlator2. Takes forever. I <CTRL> C, but then a page
comes up with a bunch of gibrishh.
I repeat the procedure. This time I use d key on computer.
I finally get to Save to Disk, but when I do, it does not go
into my directory as a .zip file.
Seems like it saves as one large open file.
What am I doing wrong?

p.s. thanks for the info on setting up StinG, via the quickfaq.
This is a big help.
But I'd really like to take a thorogh look at the docs in hypertext
format. According to the readme files they are more up-to-date.

One other question if you don't mind.
Is the Draconis web package easier to setup then StinG and CAB?

thank you.

ken

Errrrr. Well here I am !

>2. What bug fixes, new features would you like to see in these (or any of my
>programs)?

Well, you know how much fun POP3 has been on Demon lately ! I had
to resort to Oasis2 in the end. (Most days Okami wipes the floor with Oasis
in much the same way that NWatch/POPWatch wipes the floor with ICE. Oasis
1.09 and NOS might even be preferable.) Can we have SMTP just in case ?

NWatch has been running slow of late, sometimes it's as bad as 512
bits per second. CAB and POPWatch run well enough, so I doubt it's my
STiNG set-up. Could this just be Demon's news feed ?

>3. What other programs of mine do you still use (CoSTa, GAPFTP (not actually
>released outside of beta), etc).

I love GAPFTP, having used it for all of five minutes now ! I've
been crying out for a decent FTP client for ages. The graphical ones always
stall on me, making updating my site a real pain. Often, I resorted to
Win FTP at work, now *that's* desperate. I often thought about downloading
the latest version of NOS/Ka9Q just to get a CLI FTP prog again. Well done !

Have Fun,
"Augeas"

ATARIAN - NEW ATARI MAGAZINE

For some time now we've been planning to
release a short-form (16-20 pages) *printed* A4
magazine with disk for Atari users priced at
aound 2 UK pounds.

The magazine would contain a mix of news, reviews,
hardware & software updates, letters, and advertising.

With announcements indicating the imminent closure of 2
much appreciated magazines in recent days, we decided
to establish if there is still sufficent interest
in the community for a another printed magazine.

We have kindly received plenty of interest and
support from prospective advertisers, so now
its your turn.

If you think that you would be interested in
subscribing to Atarian, a regular printed magazine
with disk at approx 2 uk pounds per copy - please
email me at:

Atarian@techsoftware.freeserve.co.uk

If we get enough response we will give it a go!

Kind Regards

Bob
Parkland Publishing

If you have the normal URL to web site, then no problem, they should
work. However, all web redirecting from a virtual atari.org subdomain
will not work. Also some of the atari.org web sites, like the Quick FAQ,
are not web redirections, but are really hosted on the atari.org server.

There is the german Magnum board which allows this. It is pretty
expensive and requires TOS 2.06 too. I think it's from woller or aixit.
There aren't that many apps that would take advantage of this, so unless
you are multitasking like hell, there's probably not much benefit
considering the price.

>anything to get around this ?

16 Meg sounds a bit optimistic, you need to leave room for register & I/O
decoding.

There is/was a board from Germany that could go up to 14 Megs in a STFM, 12 in
a STE. I don't think it's made anymore, probably a limited production run.
Perhaps somebody else has details. I believe it had DMA access, so the screen
could be relocated to the top of memory.

3609. ATARI COMPUTING REFLECTIONS

Newsgroup: comp.sys.atari.st
Date: 1999-08-25 00:00:00 UTC
From: Greg Goodwin <clu-da-bard@geocities.com>
Message-ID: <37C39F71.1880@geocities.com>
Source record: 74269

Well, to share for all, and if you would like to add in your magazine (grin) feel free to do so.

MULTIVERSES
by Greg Goodwin

Atari was always a fun name to me. As a elementary student, I played the Atari 2600. As a junior high and high school student I fought along side other Atarians with my modified Atari 400 in the great Atari/Commodore War on the BBS's.
Entering college, the 8-bit scene died away, and in America the ST didn't appear to go anywhere, so I bought a Macintosh, and later a Newton. Through the years the Mac proved to be a fine machine, but it never had the games and the fun feel of my Atari days.
Nine years passed.

Through time I found myself returning to my old stomping grounds of computer geekdom at the Dallas Infomart. The faces were all different, and the computers where the standard PC and Mac, but it was good to be back. The exchange of computer equipment, and charisma challenged people made me feel at home. Then I looked at the schedule of user meetings projected on a wall in the DFW/Exchange vendor room.
"Atari Users of North Texas... what!?!" On the seventh floor, just like it had been a decade before. "Incredible!" With my wife to be accompanying we entered the swift moving glass elevator. The beautiful scenery of the "Crystal Palace" environment of wood paneling, glass, and neon green lights rushed by us, and soon we were there, the seventh level.
We walked to the place where DAL-ACE had been, but the large meeting room capible of seating three hundred only met me with a rush of air conditioned sterile air.
"Over here love!" I heard my lady call. I walked to where she was, and found a heart warming scene compared to the hastle and bustle of the business oriented user group I had left thirteen years before.
Stepping into the room, we found an old man with a beard leaning against a folding table in front of an assortment of about nine other people sitting in chairs listening. Little did I realize it, I had entered a years long AUNT tradition of the grand sermon of Dave Acklam!
"Aha! Welcome... a new member!"
"A new / old member actually. I'm from the days of DAL-ACE!"
"Oh my gosh! You are old. Have a seat, welcome back!"
I introduced myself as an Atari 8-bit User. The group was astonished, and many had been 8-bit users turned ST users through time. It became quickly apparent that these people, while good natured, actually seemed to see their computer as little more than just fun hobby machines,

though that could also be said.
As Dave preached on, my lady and I sat back in sheer bliss to see such a charming group of people ranging from their late twenties to their sixties. The later was more the case.
"Here we have the newest edition of the Pacesetter from our die hard 8-bit user friends in Florida. Amazing how those guys keep plugging away on their 8-bit Ataris and meet and have fun in their retirement community they seem to have there. But isn't that what the Atari stuff is all about? Just having fun seeing what these old computers are still capible of doing.
And speaking of which, I recently got the newest issue of ATARI COMPUTING number ten, which is to the best of my knowledge, the only professionally produced magazine in the world."

What was this? Had I fallen asleep? A computer platform with a magazine? I had heard that Amiga had a fanatical following, but Atari?
The next meeting, Kent Kordes from SYSTEMS FOR TOMORROW came to our meeting to sell his Atari merchandise while Dave Acklam displayed importing files from digital cameras on a Falcon, and Micheal White displayed internet browsing with STIK. It was then I shelled out the money and bought that magazine for my lady since it had a X-Files theme to the cover.
Later I would thumb through the pages of the magazine. I was amazed to see a magazine that had produced such a startling magazine with current fandom material like X-Files to have been produced by an Atari Computer.
The magazine had a new book smell. It advertised the new Milan computer, talked about shows in Europe, and possibilities of continuing the Atari era through other platforms like a Macintosh. Then there was talk about hardware hacks for existing Atari computers, pictures, adds, and articles. An initial impression was that Atari had a very fun and creative community eager to show what the world what their machines could still do, in sometimes a different way, and sometimes better a way.
Years ago there was a comic book released with Atari games called "Atari Force" and in that series, the crew of a starship, complete with "ATR 8000" onboard computer by the way, travelled through "Multiverses" or realms of other possibilities of what could have been.
As I flipped through the pages of that magazine with the X-Files cover, I stepped out of a world with a dominate PC computer with an lesser Macintosh tag along to a multiverse where Atari computers were kept alive and well by it's users and vendors. I had returned to the world of computing that I knew, and I intend to stay.
Many thanks to the staff of ATARI COMPUTING for being that portal to a multiverse that I may not have found otherwise.

Not exactly. Remember that HDDRIVER has the SCSI driver interface integrated. This interface is used by software like GEMAR, SPIN! etc. in order to access SCSI and ATAPI devices. You must not hide the devices that are to be accessed using this interface. On the other hand, if you don't run software that uses the SCSI driver for other devices than hard disk drives you can hide any other device.

Check this :
http://users.ticnet.com/newell/download.htm (schematics only, this is
DIY...)
There is also a site called "Atari Hardware Hacks" or something...

Re: my Falcon setup.
You have to have enabled the modem accel. port drivers, DRIVIN.PRG
(Auto file) and SCC.PRG. Once you have done, any config will allow
Wensuite to work. From a bare 4.Meg without NVDI or Magic, right up to
NVDI, Magic 5, Outside with Wensuite operating and taking mem from
virtual memory. It's the port driver that's essential IMHO

Re: your noisy Falcon HD. If it was your HD it would have crashed, it's
your fan. The fan is difficult to access let alone replace. There is
nothing easy you can do about it. Mine starts out sounding near to
death, then quietens down to a hum after a while. Don't worry.

Bob King.

Make sure that you have the correct drivers from HSModem installed for the
Falcon, and ensure that you put sting.prg AFTER HSmodem in the Auto folder.
You should be using modem2 in your script.

Hello

Just a few lines to ask if anyone has any blank 2.8" quickdisks (any brand) they no longer want or if anyone knows anywhere that still sells them new (in the UK preferbly), I'd be most grateful. I'll pay a reasonable price for your blank ones so mail me on sonik@zetnet.co.uk if you can help.

Many thanks :)
Al

3619. Re: MEGA-ST keyboard cable

Martin,
The Mega ST keyboard uses the so called "Western plug"
which is known as the "telephone plug" but there is a difference in the number of pins used: Mega uses all 6, the phone needs 2 of them although 4 are present. If you can find the right connectors I see no
problem at all: connect pin1 to pin1, pin2 to pin2...
and so on! For additional info on various kinds of
hardware issues, including "keyboarding" you should try Robert Schaffner's archives at:
http://www.rhein-main.de/people/robert/index.htm
Visit the site, fill the registration form, download
"DOIT-ST" (1,1MB, I think) and you'll get a key within hours.
Robert did a very nice job!

Nemanja.

3622. Atari --> PC - HELP!!

Newsgroup: comp.sys.atari.st
Date: 1999-08-25 00:00:00 UTC
From: RN <not@available.yet>
Message-ID: <7q0nun$98n$1@nnrp01.ops.uunet.co.za>
Source record: 74282

Hey all!

Please read quick and see if you can help!

There is an Atari ST running an automated mailer machine, and
the company want to replace it with a PC. I am now trying to get
an emulator to work well under Win95, that allows for communication
via the serial port to the mailer machine.

I have tried WinSTon, TOSBox etc etc but when I use the original
ST disks to boot up in the PC, the second disk causes 3 BOMB
icons to appear on the screen and it hangs.....

So now I dont know what to do! Any suggestions????

Thanks
RN

>

Assuming the problem is with the disks:

-The PC should be able to read these disks under W95. Try copying the files directly over to the emulator's HD directory and running the software from the HD.

-If the above does not work directly, try copying the contents of these Atari disks over to standard 720K DOS formatted floppies, using the real ST, and try again.

-Convert the disks to disk image files using one of the tools designed for this purpose. Makedisk or ST2DISK should be available on most emulation-related web sites.

Now, maybe there is some copy protection on these disks which will not work with the PC's drive. You might also have some kind of incompatibility with the emulator, the screen resolution, or TOS version. Emulators are never 100% compatible, and I certainly would not trust one in an industrial environment like the one described here. Heck, just the fact that it's running above Windows is scary enough.

Also, I'm not sure to what extent the above emulators are able to access the PC's serial port, but TosBox is probably the best candidate. Either that or MagicPC. Have you tried Gemulator too ?

3624. Steve Bak, Paul Woakes, Eric Smith

Newsgroup: comp.sys.atari.st
Date: 1999-08-25 00:00:00 UTC
From: richard@fortysecond.net
Message-ID: <37c3f3a7.2228195@news.wxs.nl>
Source record: 74284

Hello,

A while ago I posted to try and discover the whereabouts of Shiraz Shivji, and you guys have been able to help there. I am looking for Steve Bak (Goldrunner, Return to Genesis), Paul Woakes (Backlash, Mercenary) and Eric Smith (MiNT) as well, but Yahoo people search doesn't cut it. There are way too many Eric Smiths, and Steve Bak came up with an invalid email address. Are any of you aware of where these people work these days? Snailmail or email addresses?
I'd me immensely grateful if anyone could help.

Richard

Hi Patrice! Thanks for uploading them. I think Martin did manage to get those files and upload them to the Belgian site as well. There is no need to apologise-I think its just that you and I are at opposite ends of the Earth! <grin>

Thanks for the hard work on these programs, and continuing to support Atari users! ;-)

If you know other BBSes which carrys Atari files and Fidonet echo don't
loose any second E-mail me

Name
Country
Phone Number(s)
Speed (min/max)
Ratios
FTN Nodes and Networks

(list cut)

@>-->----------

Not a bad list! I'll add it to what we already have going. But for the
most part, this is what we've managed to put together for the American
BBS's. As I remember correctly, of the following BBS numbers, about 17
had a pulse. :)

Doctor Clu

@>-->----------

http://www.holyoak.com/atari/

Atari BBS List 6/09/99

Maintained by Trevor Holyoak <trevor@holyoak.com> and
Greg Goodwin <clu-da-bard@geocities.com>
(Special thanks are due to Greg Goodwin, since he has been doing most of
the work lately.)

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was
checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry
has been updated since the last version of this list.

Chris Crosskey <chrisc@zetnet.co.uk> wrote on 22-08-99:

Hi Chris,

>Pray tell...what is this resistor removal... I have a CDR200t
>(actually a tx cos it's external)....I would love a 4x burner...
Yes it's true, open your CD writer, if it's revision C or higher there is a chance to speed it up to a 4x. It's really simple... look for a SMD resistor called R621 on the board, next to the resistor You'll see the letters Q/D. This resistor has to be desoldered. And that's all there is to it. Yamaha like every firm does productiontests, if a certain batch fails these, they solder this jumper in, which turns the CD Writer into a 2x. The firmware for the 200T, 400T and 2260 is identical.
Keep in mind though that the 200T only has 1Mb cachememory, opposed to the 2Mb which is fitted in the 400T, so you are more likely to get a "buffer underrun". If after the modification, you CD Writer can't burn CD's at 4x, You don't even haven to solder the resistor in again, just leave the software at 2x....

>Metados won't let me use it as a data drive (I get a tracklist
>sort of thing...) but it allows it as an audio drive with most
>compliant CD-Audio players...
SoundPool has produced two different SCSI_CD.BOS drivers, drivers higher then 1.16 are no good with the Yamaha CD200/400/2260. At their website you can download a BOS driver called SCSI_CD.OLD rename the OLD into BOS and be amazed.. :-) It's possible this driver is hided somewhere on your keydisk, just look around in the various folders.
SoundPool : http://www.soundpool.de

In case you wonder...i'm not a walking oracle. I got this info from the German online magazine ATOS. It's published in ATOS 98/3 and written by Michael Ruge. He's the guy who wrote the Chip&Chips HYP, so it comes from a quite reliable source. If your German is good enough or you would simply like to see a screenshot: http://atos.atari.org, download the html version, it's pictures are better. I think that a copy of ATOS 98/3 can also be found at the Belgian ftp site from Martin Byttebier

Good Luck
Cheers from Belgium
Dennis

Hi Martin,

>Imagecopy surely has a PNG feature and so does Graftool too.
>Gemview takes too much time to get loaded. The best bet is Imagacopy.
>It loads fast.
Don't forget the French.... Parx.sys drivers support the PNG format
also. It comes with a driver for normal ST's and 68030 with FPU. Not
only can one load pics in PNG format but also save them. The PNG format
was added to the Parx.sys drivers in september 1998.
The Parx.sys drivers are used by programs like D2M, Picollo, Digilab
etc..

Jos Vlietstra <jovlie@xs4all.nl> wrote on 20-08-99:

Hi Jos, :-))

I thought to add my two pennies just the same here.....
Somehow somewhere someone up there doesn't like you, every time you dare to buy a SCSI device things go horribly wrong :-)))

First of all: It doesn't matter at all if HDDRIVER recognises your CDWriter, CDROM or scanner. I know it's a comfort to see these devices recognised but there's absolutely no need for it. So don't blame Uwe Seimet for this. For once he's not to blame :-)

Second: If you use CD Recorder Pro, and you want to create a CD, there is no need for a CD Driver to be installed. The CD Driver needs to be installed if you want to use the device as a CDROM. Go to the menu called option, and select recorder. The program will scan the SCSI bus and display the CDWriter in black, select it and forget all about this for the rest of your life.

Three: If the program doesn't recognise Your CDWriter, then clearly something is wrong with your setup. My Philips and Teac both don't like to be the last in the chain, so you could try this. Setting parity is only good if parity is set on ALL the other SCSI devices also, so you may have to play around a bit.

Four: Forget about ExtenDOS, it's not compatible with SPIN, I imagine you like to keep the features of SPIN? I know you've got CD Tools, just stick to that, it's perfect for the job. Use the OLD SCSI_CD.BOS driver for your Yamaha 200 (see my previous posting) and use hs_iso.DOS from CD Tools. Your config.sys should look something like this:

```
;SCSI 4 : PIONEER CD ROM ==>Y
;SCSI 5 : YAMAHA CD200T ==>Z
*BOS, C:\auto\spin_sd.bos, Y:12
*BOS, C:\auto\scsi_cd.bos, Z:13
*DOS, C:\auto\hs-iso.dos -128, O:Z
*DOS, C:\auto\hs-iso.dos -64, P:Y
```

In this example your Pioneer will run with the SPIN drivers and your CD ROM with the SoundPool drivers, this is necessary because otherwise it's not possible to read different sessions on a CDR. Also some CD ROM's have problems reading CD's that are not closed yet.

Five: Unless you use a Falcon, don't use CDREADER to sample music, this program is a piece of shit, use CDCOPY.PRG or drag the WAVE samples from the SPIN CDROM straight into the program.

Six: When writing data in different sessions, don't forget to click the option "read previous session" otherwise your work is gone....

Seven: When writing a data CD which contains a lot of small files, make an image first. The SCSI interface of the TT and Falcon are not fast enough to deliver a constant stream of data to your writer. When using a Falcon with a fast IDE drive, then forget what I just wrote.

Eight: For writing music CD's you don't have to make an image at all. Up to 6x the SCSI interface can manage.

Nine: when writing a real CD-DA always close the CD. A lot of CD players in the Hifi towers can't manage a CD which isn't closed.

Ten: Go out, have a Belgium beer, enjoy life :-)))))

Cheers from Belgium
Dennis

Hi Louis,

>Maybe we stand better chances to start yelling at the Netscape people,
>asking them for a port to Atari.
Interesting thought, however I'm afraid that our platform is just a bit
to small for them. However, I remember not that long ago some fanatics
shouting here that porting it to MiNTnet was just a question of
time....

Perhaps we should start yelling at Opera? these guys have produced a
very nice quick, compatible browser for nearly every platform except
ours. I just read that a version for BeOS is ready for release. Opera
even runs on an Amiga.
I'm serious here, why don't we try? If every CSAS reader who wants a
decent browser sends them an email asking them very politely why we are
being discriminated :-) perhaps one of the Bobo's there might give it
some thought.
Supposing they would do it, under what stack should it run? :-))))) Oh
I forgot, we already had this dicussion here.

Cheers from Belgium

(Original Posting)

ATARIAN - NEW ATARI MAGAZINE

For some time now we've been planning to
release a short-form (16-20 pages) *printed* A4
magazine with disk for Atari users priced at
aound 2 UK pounds.

The magazine would contain a mix of news, reviews,
hardware & software updates, letters, and advertising.

With announcements indicating the imminent closure of 2
much appreciated magazines in recent days, we decided
to establish if there is still sufficent interest
in the community for a another printed magazine.

We have kindly received plenty of interest and
support from prospective advertisers, so now
its your turn.

If you think that you would be interested in
subscribing to Atarian, a regular printed magazine
with disk at approx 2 uk pounds per copy - please
email me at:

Atarian@techsoftware.freeserve.co.uk

If we get enough response we will give it a go!

Kind Regards

Bob
Parkland Publishing

Hi again,

re your lack of sound, you have got your internal speaker switched on
haven't you?

Perhaps your bootup RAM has been set to switch it off. The demos which
work could just be turning it on temp. like. You never know!!!

Bob King.

>images.

I wished I could say this but alas, no way to make it stable.
Which version are you using? I'm using the 030 version and maybe that's
the problem on my Hades?

Have you tried java-script? On my Hades I get lots of error message like
'Illegal characters' of something like that and at the end I have to kill
LoA because there is no way to get rid of that warning box.

Indeed LoA loads initially the images very slow but once in the cache it's
very fast.
Yep, while downloading the whole thing is blocked. I even can't do anything
else like open a desktop window.
With Cab I can everything I want to. Open a telnet session, no problem,
uploading/downloading file with Aftp, no problem, etc...

Sadly, I must sell this kit to clear some space.

TT 2MbST + 4MbTT RAM with Seagate 550Mb HD
ï¿½300

14" Trust SVGA Monitor
ï¿½30

PC case with PSU containing SCSI devices:
IBM DSAS 3360 330Mb HD
Archive Viper Streamer Tape (with 4 cartridges)
IBM CDROM
ï¿½100

Zoltrix 28.8k VFC modem
ï¿½20

Image Systems Teletext Decoder (uses cartridge port)
ï¿½10

Maplin UHF TV tuner. Output comp. video for above. Requires 5v supply.
ï¿½20

Canon BJ-300 printer with dual bin paper feed.
ï¿½80

The TT is loaded with CBHD, Magic v5.11 and NVDI. The HDs contain s/w
accumulated over 15 years. Many mags. manuals etc.

Obviously would prefer to sell as a complete working system but offers
invited for peripheral components.

I am in South Manchester.

Not quite true. Dan Ackerman has ported mICQ to STing, and it seems to
work with any OS. For some reason, it doesn't seem to like my Geneva
setup unless I turn multitasking off, although someone else told me it
runs fine on their Geneva setup. Should work with Magic and Mint
(where it originally was ported for the Atari from Unix).

That's not my experience, it's almost as slow when loading from the cache.

>years, I don't use a PC and for one reason or another, never tried IRC or ICQ).

Hi Paul!

Yes, both programs are easy to set up, AtarIRC is the best supported, and new versions appear quite regularly. mICQ for STiK/StiNG is quite a recent development, following on the heels of the MiNT version.

mICQ is the easiest to setup, you just run it whilst online, and it'll ask the questions that it needs, and then get an ICQ id for you if required. Unlike the official PC/Mac etc versions, it only allows message sending and replying, and not a chat mode, but this doesn't matter too much to the average Atari users. Unlike what Dennis said in the previous message, it doesn't require a multitasking system like MagiC.

AtarIRC doesn't require a multitasker either, but like most things, it runs better with one. IRC is a great way of chatting with fellow Atarians in near realtime. The main channels for Atarians are #Atari, #AtariScne (for the demo crews etc), and #Atari2. Last time I was on IRC, #Atari was locked out, which means that no-one could get in, but everyone just went into #Atari2. For installing just read the documentation, and once you've done that it'll be pretty simple.

I have both mICQ and AtarIRC on my website for download, though currently I only have v0.99 of AtarIRC on it, (the latest I think is v1.03), but I'll sort that out soon.

Go to http://www.users.zetnet.co.uk/jfhaslam/atari.htm

Cheers!

If it hangs on 'connected', check your password. It cannot be longer than
8 characters as the SERIAL.CPX has a hard-coded 8 character limit by
mistake. That's what caught me. Once I changed the password to 8
characters from my earlier 10 characters, STinG connected fine.

Hi,

well, I've got this fast Winbox now, and it's fast indeed. Compared to my 10-year old TT, pics load/display much faster, html-sites get in a lot faster and also mail and news is fetched a lot faster.
Now before you think: another Windoze sucker, nope, I'm still glad I've got this old TT. I used to run fidostuff with a BBS: mailer/reader/maintainer. Especially the reader was pretty easy on the configs. Never had a problem to select the msgs I wanted to keep and others I wanted to discard. Next came the Internet stuff, same thing. I've been working with Newsie, FireNews, and Okami/Newswatch and for this stuff I only needed 15 minutes to figure out how it worked.
Not so on the Win platform: I've been trying NS Communicator, well, sorry, after more than 1 day still haven't found out how to get stuff for offline reading.
Since I couldn't find (so far) anything better, I reluctantly installed Outlook Express 5, at least I know it does handle offline reading. Don't ask me details, I can barely manage to get it done :-)
Next problem is the maintenance of the only group I hooked up thusfar, C.s.a.s., I haven't figured out how to keep the interesting ones and discard the rest in the last 24 hrs....
I know we've been discussing Atari browsers a lot lately, and for sure the Win browsers are fast (I really love Opera; just too bad it won't handle offline newsreading), I'm not complaining about Pegasus for email, but the bloody newsstuff is giving me a headache here. Userfriendly? Stick with Atari please,
it might be old but even a sucker figures out the s/w within 15 minutes...

Hi Ken!

>I would like to use the program ST-GUI15 to read the docs
>to StinG and CAB.
>Unfortunately ST-GUI15 docs are in German.

I think there is an all-english version available on Joe Connor's page,
as it was supported by InterActive, which is closed now. But it's likely
to be on the TransAction pages. Mail him on jconnor@cix.co.uk or
joe@inactive.cix.co.uk and ask.

>The site index labels the program as xlator2.zip

Sorry - know nothing about that. Mark Wherry's GEMTrade (Shareware) is
quite a useful translator, but since english docs and programs are
available, why bother?

Regards, /Peter/

>programs)?

I still use POPwatch daily, and really couldn't do without it, as NEWSie (my chosen e-mailer/newsreader) WILL NOT delete mail from my server if I use it to retrieve my e-mail - despite being set up to do it. And of course POPwatch retrieves e-mail about 5 times faster than NEWSie too.

I did have a problem with POPwatch a few months ago, but now it seems to have stopped (and to my knowledge, nothing has changed on my setup) [!?!?]

Anyway, for a while, when I would connect with STinG, then launch POPwatch, as soon as I clicked on "CONNECT" (or send Queued mail that was written with NEWSie), I would get an immediate "-00015 user timeout expired" message before I even connected. And sometimes when downloading a few e-mails, midway through I got this same error message.

And it had worked perfectly for months, and I didn't change any settings. My "CONNECT TIMEOUT" is at 60 seconds, and my "DATA TIMEOUT" is at 100 seconds. And I also tried these with various settings (all the way to the maximum) with the same results. I also reinstalled the program a couple times from backup but the problem continued.

Have you heard of any problems like this before? (and by the way, when I would experience these problems, both POPGEM and NEWSie were able to retrieve the e-mails succesfully, so I _think_ this would rule out my ISP as the cause of the problem).

For the record, I use STinG 1.20 on a Nemesis-enhanced Falcon030 under MagiC 5.11 / NVDI 4.10.

Thanks for your continued support Gary!

Source record: 74069

Hi all ,

Thanks for all your help ,
STing is certainly an education!!

mmm... the problem seemed to be that I didn't have HSModem installed.

However I didn't realise that HSModem HAD to be installed in order for
STing to connect? Because that is the case on my system. (Falcon)

Anyone setting up STing should therefore should not underestimate the
importance of HSModem :)

anyway thanks again for everyones help...

I think I have about 10 peoples scripts and config files on my HD.
:)

cheers..

Paul Mac

The company who created Diamond Back has since left the Atari
market and although the program was taken over by someone else,
this too has also stopped.

The current version of Diamond Back can still be bought from Hisoft
for about 15UKP:

> into my directory as a .zip file.
> Seems like it saves as one large open file.
> What am I doing wrong?

No idea. What software are you using ?

Might as well just go and visit some usual FTP sites and get Gemtrade,
which is another translator. I'll never trust automatic translators
though. End results usually range from downright funny to completely
cryptic. Just the fact that negative forms are treated differently in
every language means that you'll probably end up understanding the
opposite of what was originally meant.

> p.s. thanks for the info on setting up StinG, via the quickfaq.
> This is a big help.
> But I'd really like to take a thorogh look at the docs in hypertext

The .HYP docs were never completely finished, so most of the pages are
blank placeholders.

> One other question if you don't mind.
> Is the Draconis web package easier to setup then StinG and CAB ?

I can't say for sure, since I haven't tried it, but from reading the
"WTB: CAB 3.0" thread, it's hardly an option at the moment.

There are two ones I personally prefer: Snapper and JML-Snapshot.
JML is crippled shareware and can save three different image formats
(one in the unregistered version).
Snapper is not crippled and alows you to a snap the whole screen a
window (with or without the window border) and you can also set a delay.

Both should be available on most FTP servers.

Check if the ST disks are readable on the pc in native Win mode. Keep
The disks write protected while doing this. Win-95 will write to the
disk as soon as you try to read from it!

If it works copy the disks on the pc to 720 double density disks and
try them on the Atari. If this works try to run the emulator again with
the new disks. If you still get the same bombs the emulator can't
handle your program.

The emulator Gemulator 98 has very good serial port emulation and is
free. It is also quite stable.

If the original Atari gets the job done why not keep it? If you are
afraid of hardware problems just get some spare Ataris from some flea
market. By running the program on an emulator you will get more speed
but less stability. If this is what you want go ahead with the
emulator.

: As far as I know the only real alternative is TelStar (from the STinG pages
: if they are still there). This is very nice in many ways but only emulates
: VT52, inadequate for some purposes.

No, actually TelStar is 'almost' vt100 compliant.
From what I can tell, it only lacks the ability to scroll (split windows),
it can't be set to turn auto-margin off. In essence, updating the last
line of the terminal will cause everything else to scroll up one line.
It doesn't yet support insert-character capability (it seems).

Well, this is even true for TosWin (Mint-Net VT emulation)...it behaves
the same way when trying to update the last line, hence anything trying to
use a split screen is a royal mess.

Really, what we need is a port of the plane jane unix telnet for STik/ng.
Then we could simply open it in a coshy shell of CoNnect and have full
color VT102/ANSI emulation (and a choice of many others), with buffers,
cut and paste, a bookoo of options for setting up keys, and the list goes
on.

Forget the GEM and emulation junk! It's already done in CoNnect, quite
well, and quite fast!

Brian

I looked at their source code and they seem to be too lazy to translate
their JavaScripts to Pearl or PHP. Then it would work on all browsers.
If they read cookies via JavaScript it is obvious that it doesn't work
with CAB.

From: bjr@master.localink4.com
Message-ID: <rs9ug9uvj7138@corp.supernews.com>
Source record: 74234

Here's a great big Plea for anyone out there that can hack around and port mint-net's telnet client over for STik/ng TCP/IP.

Please give it a try!

Why?

Running such a client under CoNnect's COSHY shell would be a dream come true. It would be fast, reliable, and complete sets of terminal emulations to choose from, including the common VT102/ANSI (with colors).

It would also offer cutting and pasteing. Very flexable terminal sizes, and MUCH MORE.

Brian

3680. Re: This and that

Newsgroup: comp.sys.atari.st
Date: 1999-08-26 00:00:00 UTC
From: Bob King <robert.king@patent.gov.uk>
Message-ID: <37C50A9D.86981A18@patent.gov.uk>
Source record: 74237

Hi 'omelette', (were you dropped, whipped and fried at your
christening!)

I answered the Wensuite question and your query re. noisy HD earlier. I
repeat below.

If my suggestion works, perhaps you could enlighten some of the OXO
bashers here.

Bob King.

<Re: my Falcon setup.
You have to have enabled the modem accel. port drivers, DRIVIN.PRG
(Auto file) and SCC.PRG. Once you have done, any config will allow
Wensuite to work. From a bare 4.Meg without NVDI or Magic, right up to
NVDI, Magic 5, Outside with Wensuite operating and taking mem from
virtual memory. It's the port driver that's essential IMHO

Re: your noisy Falcon HD. If it was your HD it would have crashed, it's
your fan. The fan is difficult to access let alone replace. There is
nothing easy you can do about it. Mine starts out sounding near to
death, then quietens down to a hum after a while. Don't worry.

Bob King.>

Don't think the icq will work without mint?,magic? something like
that, but I'm using the ATAIRC just fine for over a year nowon my TT.

Hi Steve

For my Milan, i've been asked to write an article for the clubpaper and
i wanted to include some pictures of my desktop. I'm gonna try the ones
that Matt suggested first else i'll come back and ask again.

3688. Minix ?

Newsgroup: comp.sys.atari.st
Date: 1999-08-27 00:00:00 UTC
From: maxilys@normandnet.fr
Message-ID: <af64e10090B802A1.46@nest.ftn>
Source record: 74071

Hi everybody,

No, I don't ask what Minix is. My question is:

What value should I give as number of blocks when I do:

minit -V -n 2 -P -b [blocks] J:

If I omit the number of blocks (and the "-b" too of course), MINIT complains
about the number of blocks being equal to 0 and does nothing.

If I try the automatic method:

minit J:

That's just the same.

I tried with 128 block and I got a Zip-disc of 128 Kb (approximatively). Then
I do it again with 100000 blocks. It gave me around 100 Mb. It was better but...

Is there a way to determine the right number of blocks to set?

What do these blocks stand for? (To know this would help a lot!)

Nobody has a _real valuable doc_ ?

And, while talking about docs, what can I use to read in a useable way the
".1" and ".8" files that come along with some programs for MiNT?

Thanks for,

Hi!

I'm looking for the Falcon MK-X *PHISICAL* especifications: sizes, weight, floppy location (front, side?), keyboard type connection (TT? PC?), colour...

I want to buy a MK-X and put it in a machinery-tower (see, musical equipament furniture) for have all the 'instruments' in an only gorgerous stage.

In the web I have seen prototype/design/bad pics only. And a lot of technical specs, of course!

I'll agree if some happy user can send me the info. Or the scanned manual user, too.

Thanks and kisses! ^o^

A silly question perhaps, but the Zip-disk *is* formatted and
partitioned, right?

> ".1" and ".8" files that come along with some programs for MiNT?

Ah, those man-files... They really suck, I can't deny that. IIRC there
exists atleast one GEM-based man-reader, but I can't remember if this
deals with man-files itself or if it needs external formatters. If you
can't figure it out just send me a private mail and I'll convert them
to plain text for you.

Btw. you might find ST-Guide versions of these docs on funet, someone
has apparently hacked together a script that converts man-files to
hyps. If somebody know who this is (or even better - where to get hold
of this script) please let me know. I will gladly spend some time
converting man-files to HYPs on request.

> What do these blocks stand for? (To know this would help a lot!)

What hard disk driver do you have? If you have an XHDI compliant driver
(like HDDriver, CBHD, or Hushi) you can check out the current MinixFS
version. There are updated tools from the filesystem checker and the
initializer that will do all things automatic for you.

You can also check out the ext2 driver & tools.

> And, while talking about docs, what can I use to read in a useable way the

Source record: 74078

Hi!

What version of minixfs are you using? I had no problems running minit -V
2 -n 4 k: (my zip100 drive letter).

What you probably want is something like KGMD! This is a complete MiNT
distribution - but somewhat out of date! It has a lot of documentation,
and includes 'man' which will help you read those *.? manual pages.

Are you subscribing to the MiNT list? If not, send an email to
<mint@fishpool.com> with subscribe on the subject line. There is even an
archive of postings at
<http://aire.ncl.ac.uk/Atari/Mailing-Lists/MiNT-List.index.html>.

You can find KGMD at ftp://ftp.funet.fi/pub/atari/mint and I think it is
below 'distributions'. One problem (possibly): it's in german although
Katherine Ellis has done an update to an english version. Sorry - can't
remember the URL.

Get KGMD if you are desparate to get going now! And then update the kernel
and minix/e2fs drivers by visiting Frank Naumman's page
<http://www.cs.uni-magdeburg.de/~fnaumman/mint>.

But what I do suggest is hanging on for a month, maybe longer? - who
knows! - as I suggest that there will be some very interesting news about
a major update for MiNT comming. ;-)

Salut/.

J/.

Source record: 74083

Hi guys,

I've been out of touch with the Atari world for quite a long time, so:

Can anyone give me a brief summary of what I need to backup my Atari files
to a CD-R?
I have a Yamaha CDR4416 CD-R drive (used for other things) and I'd like to
back up my Atari files. I also have a 4meg STE with ICD Link 2, a MiniS hard
drive and a Zip Plus, and various software (Diamond Back 3 etc).

Basically, I'm not sure of what software I need. If someone could post a
summary of solutions (shareware/commercial/cost/requirements) or point me to
a FAQ I'd be grateful!

Cheers!

Thanks Erik - does anyone know where I can get this in the UK?
System Solutions have it listed but don't have prices...

I use Outlook Express 5 at home, since I just can't manage to set up any
Atari newsreader to "synchronize all" for offline reading in one step
the way Outlook does. The only one capable of this is Okami, but my last
attempts failed miserably. I tried with Netscape too, and that was also
pretty unsuccessful.

> >Next problem is the maintenance of the only group I hooked up thusfar,

You mean you want to select posts to keep them ? Can't you just drag
them over to a personal folder in the Inbox ?

You can also mark a thread with glasses that any new post appears red...

> I wonder if it can be done at all ? I tried to use Outlook Express while

I don't think you can actually delete newsgroups messages. The same goes
with netscape. You actually apply a display filter to filter out want
you don't want to see. A bit of the other way round.

> It also seemed about impossible to tell it not to collect hundreds of
> messages the next time I wanted to download some.

Yes, that feature is missing, but Netscape does that.

3704. Master Tracks Pro

Newsgroup: comp.sys.atari.st
Date: 1999-08-27 00:00:00 UTC
From: Brasco <brasco1234@yahoo.com>
Message-ID: <37C6A763.90E21DB8@yahoo.com>
Source record: 74087
Cross-posted to: alt.atari,comp.sys.atari.st

Does anyone have a version of Master Tracks Pro they can email me? I tried Cubase but my monitor wouldn't work (it's color). Master Tracks Pro will. I need it for an Atari 1040ST. Any version will suffice.
Thanks in advance,
Brasco

Two oblique strategies around the problem:

(1) Find an old Mega 2 ST with no upgrading. These things are now dirt cheap, way less than a replacement keyboard membrane. The old Mega keyboard is a better keyboard and has a different method of construction than Atari's sloopy membrane installation as seen on Mega STe/TT030 units.

(2) The Mario Becroft peripherals line now has a device to plug an IBM-clone keyboard (how's THAT for cheap!) into your Atari. Hats off to Mario, who has engineered a way around the two most common Atari failures: the keyboard and the mouse!

Hi,

yes you can copy the msgs you want to keep in a local folder. I do that with the csas stuff that I wanna keep.

Under "extra options" is a maintenance feature that actually removes *all* articles. No way to select certain items only.
Also the way you "respond" to msgs is miserable: it opens a window with the cursor for editing on top, next follows your sign-off and then the quoted text.
...see this message, please!
Typical MS thinking... :-(

And indeed, the sync function to read offline isn't very userfriendly.
Another typical MS-thinking function. Good lawd, it makes me think like "Suppose the whole MS bunch thinks/works like this, how *can* it be they make profit?"

Another thing: in Win-95 one has to set each individual window to his liking, if you don't like the big fat icons. So every window you ever open has to be set like that. Incl. toolbar or whatever you like.
Now Win-98 at least has a feature "show all windows the same way like this one", it probably never occured to them that once you open one new one later it comes up in the bloody big icons style again. They probably reserved that feature for Win-2000 :-(

Well, enough of this Win advertizing :-) Let's get back to a *real* OS please.

Hi..

Just wondering if there were many commercialy released Falcon games , and where they can be obtained from?

The excellent Willies adventures.. was that ever released? And also the same question for Bad mood.. the doom clone.

Also does anyone know where to obtain the demo of K- the mario kart clone?

Any reccomendations about games for the Falcon / where to obtain them would be much appreciated.

thanks for any replys in advance..

cheers

> >What is the schematic to build a new MEGA-ST keyboard cable?
> >I recall that it uses the exact same connector as telephones,
> >but what is the pinout, at both ends of the cable?
>
> I know that Don Schmidt in his post advised that telephone cable shouldn't
> be used- probably there are good reasons for this, maybe he can explain them.

An ordinary phone connector has 2 or 4 wires, plus the correct
connectors. The 4-wire type can be used, if modified:

PHONE (looking at both plugs side-by-side):

```
====== ======
*2345* *5432*
== ==
```

MEGA (looking at both plugs side-by-side):

```
====== ======
123456 123456
== ==
```

On the MEGA, conductors 1&2 and 5&6 are actually doubled, but
if one keeps the cable short enough, you can still use phone
cables, with one connector reversed.

1,2 Vcc
3 TXD
4 RXD
5,6 Ground

Thanks to everyone who provided parts of the final answer,
we now have the whole piece together.

I am not sure what you mean by "synchronize all" for offline reading. I always download all the articles in all the newsgroups I subscribe to before reading offline. Newsie does this without problems, and without waiting between groups, but do you need something other than this ?

Cheers

Paul

Again maybe demo version restrictions.
I've a registrated version of Adamas Pro. Laoding from cache is really
fast but alas when I try to view offline a page in the cache LoA crash.

AFAIK - CD-Writer Plus will make audio CDs and Hard disk partition
backups. It won't (yet) allow standard data CDs.

I'm looking forward to being able to create standard data CDs so that I
can exchange large amounts of data between platforms, but it seems that I
may need to purchase CD-Recorder for that.

: upgrade TOS for 16meg RAM ??

I have been using the Magnum Board in my Mega STE for more than one year now and it works perfectly. In total, I have 12 Mb of RAM available. The crad fits into the CPU socket and will take the CPU and a 16Mb SIMM and has its own MMU. The RAM banks already installed remain untouched.

The Extra RAM of the Magnum STE is installed as Fast Ram, similar to the Fast RAM of the TT. This means, that any program that use TT RAM in a legal way (using the TOS functions) can use the Fast RAM of the Magnum. In case of the MSTE it may be even called Fast RAM, because it is clocked at 16 MHz. And the FAST RAM thing is also the reason, why you need TOS 2.06, as i is the onyl TOS to support FAST RAM on STs.

Regards,

Alfred

Because they propagandized all the lemmings in the world that they have
to have IBM compatible, then they have to have Windows, and got them all
to shell out big bucks to follow the head lemming over the cliff.

I believe only 50,000 falcons were produced. You can contact the EDGAR database and get 10k filings for the years in question. The 10k is the annual report and should have a breakdown of product sales by category, at least by TOS based and PC based as well as a breakdown by country or region. You may have to pay to go back that far.

If that number is right on the F030, then hold on to your Falcons 'cause they may become collectors items due to their uniqueness(DSP chip), the last computer product made by atari and the relatively low prodution numbers. Ever wonder why the F030 is holding pretty steady on their price over the past 2-3 years while ST's can be had for nearly free. Supply and demand. millions of ST's and very few F030.

Now if i could only get my PC modem fixed under warranty and give my F030 back it's modem.

B.P.

I don't see the way to do it without changing TOS - so programming of EPROM's is required.

Sorry, I goofed,

In my previous message I forgot to explain how to save a set in XBOOT after
the year 2000.

After choosing the items for the new set go to the time set in XBOOT and
just change the year to '99' - then save the set - reboot and then put in
the correct year using the control panel. this will not show the 'new set's
year as the present but at least you can still use XBOOT.

3726. VINTAGE COMPUTER FESTIVAL - VCF 3.0!

Newsgroup: comp.sys.atari.st
Date: 1999-08-28 00:00:00 UTC
From: siconic@jasmine.psyber.com
Message-ID: <7q7ba9vto6@news.psyber.com>
Source record: 74157

Parallax Inc. and Dr. Dobb's Journal proudly present...

The Vintage Computer Festival 3.0
October 2nd & 3rd
Santa Clara Convention Center
Santa Clara, California
www.vintage.org

For the third year in a row, the Vintage Computer Festival is back to thrill and amaze you with the history of one of the greatest inventions in all of mankind, the computer!

The Vintage Computer Festival is for YOU! We don't care which computer you think is the best. We don't care what machine you grew up with, or first fell in love with, or still use today. The VCF is a celebration of all computers and their history! Come share the joy of computing!!!

This year:

* More great speakers!
* More great exhibits!
* More great vendors with Cool Stuff to sell!
* More fun games and contests, including the Nerd Trivia Challenge!
* Tour The Computer Museum History Center!
* And of course, FREE STUFF!!

In short, plenty of stuff to indulge all your SENSES:

HEAR the speakers! SEE vintage computers! TOUCH them too!
SMELL their electronics! But please don't TASTE them!

"The mission of the Vintage Computer Festival is to promote the preservation of 'obsolete' computers by allowing attendees to experience the technologies, stories and people that embody the remarkable tale of the computer revolution."

If you haven't yet experienced the VCF, DON'T MISS THIS ONE!!!

Register Early and $AVE!

Register by September 15 and pay only $20 per person. That includes access to the entire event all weekend, including the speakers, the exhibit and the flea market. Kids 17 and under are admitted free, and as always, parking is free too!

To pre-register, send a check or money order to:

Vintage Computer Festival
4275 Rosewood Drive PMB#29-161
Pleasanton, California 94588

For ultimate convenience, please visit the VCF website for more information as well as a handy registration form ready to print.

http://www.vintage.org/vcf/register.htm

The Speakers

Horst Zuse

Horst, the eldest son of early digital computer pioneer Konrad Zuse, will be giving a lecture on his late father's machines and will focus on the computer businesses that Konrad later founded to market his ideas.

Jon Titus

Who can forget one of the earliest of kit microcomputers, the Mark-8? Jon designed the Mark-8 around Intel's 8008 microprocessor and wrote the construction article that appeared in the July 1974 issue of Radio Electronics--a milestone in microcomputer history.

Todd Fischer

Todd bought the assets of IMSAI after their bankruptcy and continued to manufacture and sell IMSAI products under the Fischer-Frietas Corporation. Todd consulted with MGM for the movie _War Games_ and, as a treat, will be bringing along for show and tell the actual IMSAI 8080 computer that co-starred in the film.

Michael Wise

Mike contends that his Sphere Computer circa 1975 is in fact the first integrated "Personal Computer". Some people think he has a valid claim to that title. Come hear his story and decide for yourself.

Ed Kramer

Ed has been creating computer graphics since the days when it was done using mainly analog video devices. Today he's a Sequence Supervisor for Industrial Light & Magic doing computer generated graphics and special effects for such films as "Deep Impact", "The Mummy" and "Star Wars: The Phantom Menace".

Jim Willing

Our admired and beloved VCF Celebrity, Jim will wax philosophic on various themes of stupendous relevance. This year, Jim will help the aspiring vintage computer collector restore their machines to operating condition with "Debugging for Dummies", and will also give you tips to help you revive ancient copies of your favorite computer games in "Dead Media Society".

Liza Loop

Liza heads up the LO*OP Center, a non-profit organization dedicated to improving education through innovative thinking. Liza introduced the first Apple into public schools in 1976 (in fact the first Apple 1, given to her by Steve Wozniak) and the world has never been the same since. Liza will be bringing along the Apple 1 and other historic machines for show and tell.

Eugene Kim

Eugene recently left Dr. Dobb's Journal as Senior Technical Editor to start his own consulting firm. He'll be giving a lecture on the history of free software, a very relevant topic considering the free-software movement is in full force in today's computing arena as evidenced by the escalating adoption of GNU/Linux.

Roger Sinasohn

Roger is an avid collector of early portable computers and will be giving a talk on the history of the Kyocera 85, a.k.a. the Tandy Model 100, a.k.a. the Olivetti M10, a.k.a. the NEC PC-8201A.

Doug Salot

Doug's research has uncovered what he believes to be the first "personal computer". Forget the Apple][, the Altair or even the Alto. Doug's pick as first PC goes all the way back to the 1950's. Designed by Edmund Berkeley, an unsung hero of computer history, Doug intends to win Berkeley the prominance and praise that he feels is much deserved by this virtually unknown computer visionary.

Plus!

Workshops by Parallax on their amazing little BASIC Stamp. Get a preview of this cool little device by visiting their website at http://www.parallaxinc.com.

For complete speaker information and schedules, point your favorite web page viewing software at http://www.vintage.org/vcf/speakers.htm.

The Vintage Computer Faire and Exhibition

This year, the Vintage Computer Festival exhibit will feature the exhibits of individual collectors, all vying to win first, second or third place in eleven categories, plus the coveted "Best of Show" award. The winner of the "Best of Show" ribbon will also win fabulous prizes.

This year, we want YOU to exhibit the pride of your collection. What better way to demonstrate your enthusiasm for your hobby than to be an exhibitor at the Vintage Computer Festival.

Exhibitor information can be found on the Vintage Computer Festival website (http://www.vintage.org/vcf/exhibit.htm).

The Vintage Computer Flea Market

Every year the best deals on vintage computer items can be found at the Vintage Computer Flea Market. Here are only a few of the amazing items sold at last year's flea market:

* Apple 1 (no, we're NOT kidding!)
* SWTPc 6800
* A rare computer by "the digital group"
* Morrow Decision 1 (S-100)
* California Computer Systems (S-100)
* Apple Lisa 2
* And much, much more!!

If you've got old computer stuff that you'd like to sell, there's no better place than the Vintage Computer Flea Market at the Vintage Computer Festival. Please visit our website for rates and regulations (http://www.vintage.org/vcf/vendor.htm).

The Nerd Trivia Challenge!

Hey trivia fans! Think you got what it takes to survive the Nerd Trivia Challenge? If you qualify, you'll be pitted against two other players in a battle to determine who is the undisputed master of computer history trivia. Answer the most questions correctly and you could walk away with $50 in cash plus some other nifty prizes.

Lightweights need not apply, this contest is geared towards the serious computer history enthusiast. For contest rules please visit http://www.vintage.org/vcf/ntc.htm.

Tour The Computer Museum History Center!

The Computer Museum History Center boasts the largest collection of historic computer artifacts in the world. Their collection includes rare, one-of-a-kind computers and artifacts that date back to the early part of the century and beyond.

A tour of the History Center's "Visible Storage" warehouse will be organized on Sunday, October 3. Tickets are limited and so advanced registration is recommended.

FYI: The History Center is on the move, and is thrilled to announce plans to build a permanent museum to be dedicated by 2007. You can help the History Center achieve its goal by becoming a member. Information about becoming a member of the History Center can be found at http://www.computer-history.org.

Meet Fellow Computer Collectors!

The VCF is the premier gathering for collectors of vintage computers. What better way to enjoy your hobby than by meeting other like-minded individuals to share stories and information about your computer collection. Register in advance by September 15 and save $$$! Visit http://www.vintage.org/vcf/register.htm for details.

Visit our Sponsors!

Without our sponsors, the Vintage Computer Festival could not be a reality. It is our wonderful sponsors that enabled us to bring you the Vintage Computer Festival year after year. Demonstrate your appreciation by visiting them on the web:

Parallax, Inc.
http://www.parallaxinc.com

Parallax manufactures the BASIC Stamp, a versatile microcontroller with a built-in BASIC language that is suitable for most any electronics and computer hobbyist project.

Dr. Dobb's Journal
http://www.ddj.com

Dr. Dobb's Journal is the oldest continually running microcomputer journal, in existence since 1975. It features monthly articles and columns geared towards the computer programming professional.

There is a program called RDE disk. It is a RAM disk that allows you to place all the contents of a program in the disk and it loads the whole disk as a ram disk. With a 2-4 meg ST this program is perfect to set a 1 meg ram disk and have STing and Newsie run off the Ram disk. I had this setup when I had my own brokerage firm to acces real time quotes through telnet.

Hope it helps.

Source record: 74161

As apace is needed I am forced to sell alot of software and hardware for ATARI JAG, ST, STE, 800XL, 2600, 7800, and some PC stuff at silly prices. Look at my web site :- http://www.cyberpeeps.freeserve.co.uk prices start at 30p.

3731. 720k bare 3.5 Epson SMD-286 floppy drives for sale.

Newsgroup: comp.sys.atari.st
Date: 1999-08-28 00:00:00 UTC
From: martin.w6@ukonline.co.uk
Message-ID: <37c79005.5139860@news.easynet.co.uk>
Source record: 74162

They look identical to the Falcon's internal Epson drive as
they have the same front but they are only Double Density.

Instead of beige the front is a charcoal colour. They're
almost as new.

All tested.

Price each is £6 plus £2 postage.

Always consider swops.

Also I still have a few spare Floptical disks. £3.50 each or
5 for £15.

Lastly a plain 520STFM with joysticks and lots of games plus
colour monitor £65 including postage.

Amiga 500 1MEG plus colour monitor, printer, slow modem and
lots of games £100 inclusive.

Again always consider swops.

I may have found the solution, Interface which is sitting on MagicMac disk provides a palette when it saves a resource in C that provides a translation as to how the current VDI palette is used by the AES in a colour Icon.

A sample set of the single colour icons using the Colours most often used in Mac Icons appeared fine.

MiNT 1.15.x will do this. If you have the option to partition the
Zip-disk yourself, I suggest using the "TOS+DOS"+option in HD-Driver, this
will make your Zip-disk accessible under TOS as well.

PMond <pMond@allinterviews.com> wrote:

> Anyone out there know of any reliable US sales figures for the Atari ST
> line? Sorry if this in a FAQ somewhere - I can't find it.

There's a mid-1989 STart magazine interview with Sam Tramiel, who was asked how many STs were sold up to that time. He guessed the number worldwide was approaching 1.5 million.
ï¿½
A few questions later, Sam was asked about projected American sales for the ST: "... if we don't sell 100,000 machines here this year, then there'll be big trouble."

I doubt total sales would have exceeded 3 million units, including the TT and Falcon. This based on the figures provided by Sam Tramiel for what was essentially Atari's heyday (before Windows 3 took hold). From mid-1989 onwards, it's probably a safe bet that Atari never matched the 1.5 million units sold previously. (Around 1992, Atari Canada was selling far more PC clones than TOS machines.)

Accurate sales figures must exist somewhere, since Atari paid royalties to Digital Research on a per-unit basis.

3738. Finnish keyboard for MEGA?

Newsgroup: comp.sys.atari.st
Date: 1999-08-28 00:00:00 UTC
From: Martin-Eric Racine <q-funk@intellitel.com>
Message-ID: <Pine.LNX.4.04.9908281401530.8540-100000@sandels.intellitel.com>
Source record: 74169
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,sfnet.atk.atari

Greetings,

I was wondering if anybody knows wether Atari ever produced a Finnish keyboard layout for the MEGA keyboard? I recall reading in CHIPS555.HYP (an Atari technical FAQ by Michael Ruge) that there was one for STE, but there is no mention of any MEGA version.

Btw, does anyone have any details as to which TOS versions had Finnish keyboard support (presumablty 1.06 or 1.62) and if any ST/TT/Falcon were ever built with Finnish language version of TOS?

Thanks.

bad analogy; contrary to popular belief, lemmings, though they do have
a herd mentality, do not go as far as throwing themselves off cliffs.

"But I saw this actually happening in a Walt Disney True Life
Adventure!", you say. Sorry; what you saw were Disney technicians actually
hurling lemmings off a cliff when the little beggars refused to live up to
the urban legend.

Somebody should have told Steve Jobs this before the ad agency Apple
was using at the time made the infamous "Lemmings" commercial, which
portrayed businessmen who had bought IBM running in a herd and plunging
off a cliff to oblivion. The second commercial for the Mac after the
brilliant "1984" ad, all it did was poison any chance of Apple making its
way into the business world.

Now if you had compared the IBM users to sheep, you would have a better
analogy. Of course, then we would probably face the wrath of many New
Zealanders :)

Once the floppy controller is running at 16mhz for the 1.44 drive, the step rate needs to be doubled else it would end up being 1.5ms instead of 3. anyways, A boot program to alter this on boot is ok, but is there any actual way to hardwire the step rate to 6ms ?, DD discs will sound a little rough, but once in 16mhz it will double to 3, thus no need for any software.

Thanks in advance, please could you E-mail direct also :-)

So what is the number one oxymoron in the US? - "MicroSoft Works!".
After getting a PC (under great pressure from my kids) I also find
myself comming back to my TT for e-main and news reading. Louis's
observation regarding OutLook Express is right on the money - the Atari
alternatives are far more intuitive to use and better documented. Yes,
the 350 mHz winbox (K62) is a "lot" faster than my TT when it comes to
number crunching. Is it easier to use - NO. Is it more productive - only
for some things. Has it been more stable - NO. So the TT still occupies
space on my desk and is not leaving until I find a replacement for it :)

Jo,

So you're saying that (without Mint), If I buy HD Driver and format the Zips using this, I can use the resultant Zip disks on both PC and Atari platforms without problems?

That's correct. You don't even need to format them, just partition them
(one partition) with the TOS+DOS options. It takes less than a second, and
the disks are readable by PCs as well as TOS, MiNT and MagiC (all
versions). Just be careful with long filenames if you're using TOS.

Source record: 74181

Hi all!

After a quiet summer, I thought it was about time I updated my website again! :) Nothing major has been changed in the layout of the site, I have just added/updated some more files for the download page:

AtarIRC v1.04 has been put on, replacing the previous v0.99 that I had before.

Madness by Cream is a new music demo for Falcons, showing the power of Cream's new PAULA emulator (PAULA is the soundchip found in Amigas). It has eight tunes from classic Amiga and ST games, a real nostalgic treat, including Chambers of Shaolin (sp?) from the International Karate game from about 1986!

I've also put on a MOD player for PCs (as I've had a few requests for one), called Yamp! It's v3.2, and I'm not sure if it's the latest version, so I put in a link to the author's homepage.

It's all to be found on: http://www.users.zetnet.co.uk/jfhaslam/atari.htm

Cheers!

James

Hi,

I hooked up the SETI s/w yesterday evening around 21:30 locally (version 1.06), after 18 hrs of work on my first data block, the machine states right now that it processed 82% in about 18 hrs...
I seem to recall that I've seen reports of one block in around 13 hrs...
Did I get an extra large block or what? Machine is a P-III 450 with 128 megs of mem... and plenty of disk space. I would think it would crunch faster?

Thanks for their answers to:
John Blakeley (KMGD? You're kidding! Did you see the size?) :-(
Jo Even Skarstein (Stop asking silly questions.) ;-)
Frank Naumann (I found MAN and tons of other things.)
Kay Ellis (I had only Minix 0.60.) :-\

Now, I have Minix 0.71 and it worked by itself. I have a Minix partition which eccepts longs filenames. I installed everything I had on U: on this partition and... nothing works anymore! :-))) (Made me laugh a lot!)

My symbolic links in "mint.cnf" are correct. U: is on the root of J: but all the TTP's of my /bin folder refuse to work. TOSWin (2.4) only says "Process terminated. Press enter to close the window.".

I took again the TTP's of my /bin folder in C:\MINTSYS (where my links formerly pointed to). They work if I launch them from the desktop but from tcsh, I get:

/dev/u/bin/[whatever program]: Access denied.

What did I do wrong once again?

To avoid the questions, my setup:

Hades 060/96 Mb, MiNT 1.15.1/N.AES/HDDriver. My Minix partition is on a Zip-disc (J:) and the long filenames are perfectly readable from Jinnee or from Boxkite.

Where's the problem? Heeeelp! ;-)

Source record: 74187

Have you got the Seti Client set up to run all the time?, and have it running in the System Tray so it doesn't show the graphics, as it tends to run a lot slower if it has to calculate what to print, if you want to run the screen saver set it to blank at 0 minutes so it doesn't show the graphics.
I have a P-II 350 with 128 megs of RAM, it would take 36 hours when I had it set up as a screen saver (showing the graphics) and only 11½ to 12½ hours when I set it to run all the time and didn't show any graphics, your computer should do a unit in 11 to 12 hours.
If you play games or do anything really intensive then time will pass and hardly anything gets done.

Claggy.

Welcome to the Atari ST newsgroup!

I'm a part of the Atari Users of North Texas. In that group, we have about ten adults that show up on a regular basis with about 10 to 15 other members that show in a revolving fashion. :)

Of those adults, there are about seven women. Four are married (one being my wife), the other three are single. Two are creative and one of those two are fun. The third one would be the type most would go after, though she has a kid already so I hope you like children.

And there you have it. :)

I use a Telecommunications program called Flash II.
By Missionware software.
The very last version for Atari.

I am in shell only. I just see text, no graphics. I do not have a browser
as of yet.

At other times, it downloads just fine.
The only other time I remember having this problem was when I was
at another site. I was trying to download a demo version of MagiC.

I don't think its the software. It really has been running quite
stable for me.

freeMiNT 1.15.1 is also very cheap but ofcourse if it's just occassionaly
you must read PC formatted Zip's BIGDOS is a very good alternative.
HDdriver is always a good investment.

Alternatively, there is a module in Look'n See that strips out all the
'special emphasis' features (bold, underlined etc with its backspace
ticks) and leaves plain text that you can read in any editor or text
viewer.

Yes it is, as TOS 1.xx can't go above 4 MB. Even 2.06 needs an extra
MMU, but that (and the TOS 2.06 chips) can be fitted to the Aixit
Magnum upgrade board. Note that Aixit normally supply German TOS
chips, so it's better to buy them here (TUS or Sysol).

In this case software IS hardware.
The consequence of a software change of the steprate is an electrical change on the input pin STEP on the FDC. The change is of course a time pulse. You can build harware that will do this, a capacitor and a couple of resistors, but why bother? The TOS 2.06 ROM:s can be altered (one byte) so that 6ms is the default setting. You would also need to recalculate the CRC checksum at the end of the TOS-ROMs. The routine for that can be found in the TOS-ROMs, it's a table.

If you need to change the steprate at a very early stage you can use a bootsector loader like Bootsie.

3772. NEWSie - Upgrade Suggestions

Newsgroup: comp.sys.atari.st
Date: 1999-08-29 00:00:00 UTC
From: Nurmix@socal.comSPAM-FREE
Message-ID: <7qa5rb$2sv2@enews3.newsguy.com>
Source record: 74105

I don't know if John Rojewski is still updating / supporting NEWSie, but if so, I have a few suggestions (I've also e-mailed this to him):

- Show DATE SENT for OUTBOX mail. I know it shows it in the actual OUTBOX overview, but it doesn't in the individual e-mails. InBox mail has the date where the OutBox mail shows "Organization" instead. I often print business-related e-mails I've sent and it would be nice to see at a glance when I actually sent it.

- Separate folder (other than putting everything in "WORK") for extracted file attachments

- Fix address book NICKNAME problem. Now, it only works if you have the "ADDRESS.ABK" (default) file loaded. I have several different address books ("TRADERS.ABK", "FRIENDS.ABK", etc.) but if I load any file other than the default, the nicknames feature doesn't work unless I rename the .ABK file to "ADDRESS.ABK".

And the two MOST IMPORTANT to me...

- Allow Queued news articles to remain in the Offline Postings Out Box after sending. Sometimes the news server my ISP uses chokes on 1 or more messages, and doesn't actually receive them. But unlike the e-mail outbox, the messages are gone after I "connect to host". So if they don't make it to the actual news server, I am forced to re-type them again (of course I lose all quoting and threading and such). If they remained in the Offline Postings Out Box even after being sent to the server, I could simply re-que them and try again - EXACTLY as the e-mail Out Box works now.

- A "delete all" (ie. mark ALL as deleted) for offline article reading of newsgroup articles. There already is a selection for "mark ALL as READ", but that doesn't physically delete them from the hard drive.

Thanks!

3773. [HELP] PC-Speed installation instructions

Newsgroup: comp.sys.atari.st
Date: 1999-08-29 00:00:00 UTC
From: french-lines@usa.net
Message-ID: <7qavrj$mh8$1@nnrp1.deja.com>
Source record: 74106

Hi,

Many years ago, I acquired a "PC-Speed" hardware device from SACK Electronic GmbH, which would plug over the 68000 CPU of an ATARI STe, and give access to DOS based programs.

In fact, I never went on to installing the device, (probably because I didn't want to void the ATARI's warranty), and the box laid in the back of a drawer for many years. Finally, I have decided to give it a go. I have all that is necessary (the board, the software) except the installation leaflet which presumably explains the hardware installation procedure (in particular, which way round you should install the board). My board is specifically for STe's (square type CPU).

So, if anyone has experience with this, and has kept the installation leaflet, I would be very grateful if you could send a copy (either scanned leaflet, or just the instructions).

Thanks in advance,

Patrick

Yes. Works fine. Use DOS formatted ZIPï¿½s to transfer data between
Falcon (MagiC) PowerMac (OS8.6) and PC with WIN ï¿½98
HDDRiver generates the right format.

> If you play games or do anything really intensive then time will pass
> and hardly anything gets done.

Hi Claggy,

most valuable tip... I finished the block in around 19 hrs 52 mins because I operated the set without the screensaver getting active. So now I set it to blank at 0 mins, the Win setting is still 15 mins and it doesn't display the gfx any longer. Guess that's pretty useless unless you wanna impress friends with "look what I'm doing over here..."
So I just returned my processed stuff, got a new block and indeed the machine is set to run SETI all the time, not only on the screensaver.

Figure the next block could be finished in 12-13 hrs.

Thanks for info, I see the Step pin is actually a output pin, and the WD1772 has 11 commands to be used, one of which is the STEP set command there are 2 bits to be set for the 4 step values. I think if I simply hardwire a few comparitor chips to check to see if the ST is trying to set this value, then the step set pins will be disconnected from the Bus and grounded, 0 0 is 6ms, The ST would then think it had 3 ms set but in fact it would be 6ms, actually for 16mhz 6 ms would be 3 anyway so the ST would be right anyway. I'm going to try this idea today and see if it works :-)

The "Ultimate Virus Killer 2000" is the industry standard virus killer for the Atari ST/TT/Falcon platform. The program has been around for well over a decade, and with the latest release (8.1) it's turned shareware.
There is now an official "UVK 2000" support site where you can download the program, find descriptions of all Atari TOS-platform computer viruses (and their symptoms) and more. It's located at http://uvk.atari.org.
This message is being sent to three newsgroups. If you think this constitutes spam, or if you think this message does not belong in your particular newsgroup, please contact me at cronos@atari.org and I will refrain from posting to the newgroup in the future.
Thanks for your time.

I'm not sure what you mean here, but *all* programs that allocates memory
through the OS (i.e. everything but games) will use this memory
automatically. I'd say that everybody who use a multitasking OS and/or
DTP/graphics-programs would benefit greatly from more RAM.

The next issue of AUNT BYTES is being worked on right now and I would love whatever info I can get about the new Milan (and who to contact about it).

Should be a fun issue.

Thanks in advance, and if you are a Milan user, drop me a letter also!

Doctor Clu

Bus-Error. Serveral parts can generate this error. Mostly the internal
COMBO Chip generates this error if he detects any hardware mismatch.
(Mostly one of the subparts doasnï¿½t response in a defined time)

Have a look to the internal TOS chip, PowerSupply.

For more informations about the Falcon hardware take DOITF030.

3791. HD Driver and DOS compatability

Newsgroup: comp.sys.atari.st
Date: 1999-08-29 00:00:00 UTC
From: Steve Stupple <Steve@atari.org>
Message-ID: <17KF0DAeCWy3EwRj@steverosie.demon.co.uk>
Source record: 74124

Hi

I've got a problem and I wonder if I'm alone with this or does other people have the same, or even if the latest version tackles it.

I have a shuttle drive that allows me to use it on a PC via a parallel port OR a SCSI card.

If I format it for use with TOS & DOS, when I try and read it IN DOS I get garbage; however if I read it under Windoze there is NO problem.

I need to access this drive from DOS, so that I can manipulate files between the 2. This was the main reason for going for HDDriver.

I'm using version 7.51. If this is resolved in the most recent version then I'll upgrade, if not I won't.

Any help will be more than appreciated:)

2 bombs=bus error (usually attempting to access a bad address).

Try booting your Falcon with the ALTernate key or Control key down.

Mark

3793. Re: Gemulator 98 for Atari 1040 STE

Newsgroup: comp.sys.atari.st
Date: 1999-08-29 00:00:00 UTC
From: db361@torfree.net
Message-ID: <FH8M7z.CIJ.0.bloor@torfree.net>
Source record: 74126

I think the problem is with A PC trying to recognize a MIDI port in the
way the 1040STe (or any other Atari 16/32 bit, for that matter) does.

AFAIK even the great Darek Mihocka threw his hands up in despair, trying
to get the PC to see a MIDI port. There's some internal gimcrackery in a
PC that puts MIDI recognition at the end of a long chain of OS-related
events which is totally alien to the TOS/GEM way of doing it. I think
that none of the PC-based Atari emulators will `do' MIDI.

I would be overjoyed to learn that my beliefs as stated here are wrong.
If an Atari emulator could give me access to NOTATOR, I'd get a PC tomorrow.

Last Updated 08/29/99
- Sold items removed

I have the following Atari ST components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer, Vectrex or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST - Boxed with power supply and mouse
- Atari Mega4 ST - Boxed with keyboards/mouse/power supply
- Atari SC1224 Monitor 13" ST Color Monitor
- Atari PCT1426 Monitor 14" High Resolution TT/PC Color Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supply and Laser Printer Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supply
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Magic Sac 1 Mac Emulator Cartridges (with manuals, NO ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- AtariWorks - by Atari (with manual and software (unopened))
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari (with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)

- Brataccas - by Psygnosis (without software)

Magazines and Specification sheets Please make an offer
==========
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

I have used the GFA command

OUT 3,<data in byte format>

and it works fine from within Gemulator-98 sending MIDI notes to the
internal soundcard on the pc.

>

Probably most serious Atari MIDI software will not work because they
have to access the port at a very low level to avoid problems with
input/output buffers and timing.

I had some trouble installing Gemulator, until I found out that you have to
put the tos.img file on your root directory under C:\

> Breakthru begins to
> load the stops,leaving the cursor in the busy/wait state.Some other Toses
> give us a white screen which then turns to black and white stripes.Please
> help if you can.Thanks in advance

It is a bad idea IMO, to do MIDI sequencing on a PC emulator. The PC already
has some powerful MIDI-sequencing and running Atari software over Windows
emulating an Atari will never give you the same feeling. Windows and
emulators are not stable enough to keep the rock-solid MIDI timing the Atari
has, and no emulator will be 100% compatible with a real ST. You should
really either get PC Midi software or keep the STE.

Not really hardwire, but TOS 2.06 has this set as default, so you could just upgrade your TOS.

It makes me wonder how many TTs were produced. I know most were sold in
Germany, where Atari made a better profit on them. If 50,000 is an
accurate number for the Falcon then there probably were fewer TTs made.

The interview I mentioned also touched upon foreign sales, and Sam
Tramiel said that Atari never provides figures on per-country basis.

Can't the problems with cookies and javascript be corrected by writing
additional ovl files. It seems that whatever CAB cannot do itself, its gets
an OVL file to do it, like read JPEGS, access the internet etc.

You should try Start-it !!!
I use it on all my Atari computers since many years. I think it's the best one for booting a STE computer and select acc or prg or anything else at boot-up time. And, believe it or not, it's mouse driven at the boot-up time! The only one that could do so!
You could ask Christian at neurotica@bigfoot.com if his software allways avalaible.

I don't know. When the TT came out Atari was still rather popular, and
although the machines were VERY expensive, they probably had a better image.
Yes, most of the TTs went to Germany.

For the Falcon, well, by the time it was available you hardly heard of Atari
anymore. Everyone was PC already and there were very few games coming out
for the Atari. It was also pretty expensive at the time, so I don't really
think there were more Falcons than TTs sold. I remember seeing new Falcons
around 1994 at a local supermarket. Nobody wanted them. I wonder what
happened to those machines.

I am a Milan user (series 1 with a 68040 CPU and no USB ports). The new one (68060 CPU, USB, 3D graphic card) is currently not sold. The new one isn't based on the old one AFAIK.
Another contact address is the Falke Verlag. Contact Ali Goukassian for details (chief editor of the ST mag "ST-Computer): agoukas@aol.com

I remember some discussions that MiNT might be able to use this memory, even
If you use an older TOS. Something about a MXALLOC function for extra memory,
I'm sorry I don't have the details.

Of course, this is only useful if you use MiNT.

TOS 2.06 will detect the extra memory, & will try to load accs into here
during boot. It also tries to locate the screen memory here.

I don't think you can purchase HDDRIVER in the USA. Try System Solutions
in England. They always have the latest version (currently 7.73)
available.

Yes, exactly. With HDDRIVER you can create ZIP media that can be used
with both the Atari and PC without any additional software.

There won't be a change in more recent versions. Note that the format
DOS and Windows use is identical So if something doesn't work for you
under DOS but does work with Windows there is probably something wrong
with your DOS setup.

Hello everybody.
A new Doom version is available:
New keyboard routine, less buggy, and now you can use mouse, joystick
and joypad (port 0).
I don't have any joypads, so could someone test this feature, and mail
me problems (bad buttons and so on).
To make an Hades port, I would like to know if MFP interrupts are the
same (especially keyboard and Timer A). VDI display will be done soon.

Hi all, due to timewaster and my desperate need for cash I
again offer the following -

Atari Portfolio palmheld computer + manual, built in Text
editor, Diary, Calculator, Address book and Worksheet
applications.
Serial interface
Parallel interface + manual
Parallel connection lead to PC
64 kb mem card
32 kb mem card
Original Atari file transfer software on 3.5" & 5.25" disks
Portfolio Club Deutschland CD-ROM (65mb software)
2 DD disks of PD software
All in Atari carry case 12"x10"x3", for lynx originally but
has internal dividers and is ideal for carrying all the
above, or a flask of hot soup and sandwiches.

85 pounds the lot or 90 pounds inc P&P in uk (excludes hot
soup but includes 3 rechargable, if tired AA batts)

Regards, Steve.

You forgot FAT32. If the media is bigger than 512 KB, Win95b or later uses

this one instead of FAT16, but older versions of MS-DOS are not able to
use
it.

As far as I understood the initial posting this was a "normal"
partition, i. e. not FAT32 partition.

Err, are you sure you mean 512 _k_B? I've yet to see a floppy disk with
FAT32 ...

Furthermore, Win95 OSR 2.x and Win98 won't use FAT32 unless you
explicitly tell fdisk to do so. Haven't tried what "Format media" puts
on PD cartridges, though, but at least fdisk doesn't automatically use
FAT32.

Ciao

Thomas

Yes it's a normal partition. Partitioned using HD Driver 7.51. viewable and usable using Windoze '98 and a DOS window! but not under DOS 6.0 or 6.22 from DOS!!!!

Funny enough I get the opposite results when I installed my Portfolio card drive!!!! I can access the card drive from DOS but not Windoze or in a DOS window!!!

It wouldn't be practical on a floppy:)

FAT32 isn't beneficial for small drives. I wouldn't use FAT32 on drives
less than 1Gb as you can LOSE disk space. FAT32 also allows partitions
to be larger than 2.0GGb. I think the max partition you can have with
FAT32 is 8Gb, but am not sure.

>
>Furthermore, Win95 OSR 2.x and Win98 won't use FAT32 unless you

When formatting from DOS or Windows, you get standard FAT(16) unless
requested. PD cartridges are formatted using the standard FAT(16).

Can this be used on a standard 17" multisync PC monitor? I've got this connected to my Power Mac atm you see.

I see you're still in Manchester Rob, email me as I'd love that TT of yours :-)

CDRECORDER is the package I use...The Anodyne one does what it set out to
do which is offer parttiion back-ups and CD-Audio, and from what I['ve seen
it does it well...CDRECORDER is a full data CD writing package and all does
full PQ glass=mastering, and also will handle foreign formats...the reason
my A300 Yamaha sampler has a 400Mb dik in it and nothing bigger is becasue
the SCSI copy function will make me a Yamaha format CD out of it when I
back it up...it's a neat trick :-))

On 30 Aug 1999 15:54:56, Mattias Danielsson wrote:
>How big intern harddrive can i use in Falcon?
>.

Enormous....If you use HD-Driver you can get 1Gb partitions (I've never bothered but the option is there), if you use an ASP IDE-Burster your Falcon can have a normal (cheap) 3.5" IDE drive installed (It's a squeeze but it goes in:-))...if you are using Magic then you have a silly number of drive partitions available, if you use TOS then you have 16....2 of these are for floppies and it's a good idea to have a CDROM these days so lets say P is your CD....that leaves 13 available letters to TOS so therefore it looks like 13 GB....I use a 4.32 GB in my stuidio Falcon and it rocks, blazingly fast, works with everything, needs HD-Driver :-))..

But
> maybe we will see it one day....
>
Ooops, then I read it in the ST-Computer mag (which has always the
latest Milan news). A protoype exists but it may take a while until it
is produced in series. I don't think the Milan will make it this year -
so why should they put big announcements on the Milan page?

Mucs have an official announce page:
http://mucs.com/newnew/cbymucs.htm
They have the info directly from Milan GmbH but no, they don't have a
prototype, yet. Otherwise I would have asked them to send me one
because my program is distributed by Mucs in Germany :-)

The page is in German language but it should be pretty easy to figure
out the technical specs.

Greetings,
Matthias.

Hi all,

Is it possible to network my F030 to the PC and use the PC's modem that way, my internal modem took a crap and its dependant upon my soundcard to work and its all screwed up. I took the ext modem from the F030 to use on the PC because I need to maintain my website. And CAB doesn't understand javascript.

> Any ideas? Thanks.

I often use GraphicConvertor on Mac to save TIFF and PICT images created with Photoslop or ColorIt (created or scanned images) out as JPEG's so they can fit on a floppy and be easier to transport home to my Falcon (it lives 15 metres from the Mac in another room!). I haven't yet seen a JPEG created with GraphicConvertor that GEM-view 3.17 hasn't been able to handle.

Theoretically GEM-view should work perfectly under MagiCMac like it does under Atari TOS/Atari MagiC, but I haven't got MagiCMac to confirm this. How does MagiCMac normally access files on a MacOS volume? Does it allow long filenames etc...? Maybe if you restrict MagiCMac to 8.3 format files GEM-view and other software may behave, as I know some Atari software is only happy with 8.3 format files...you may also need to save them to a DOS format storage like floppy (yukk!) to ensure you have 'proper' 8.3' files.

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

That is pretty standard. It is probably more difficult for them to support specific platforms than it is to be 'generic' (gasp!, I should wash my mouth out with soapy water for suggesting that anything other than Steve Jobs and Bill Gates babies be supported!!). They probably still 'narrow the doorway' just to spite anorak wearers like us!! ;^)

Maybe Draconis' browser with Javascript will work? Thats if cookies are put in properly...

Kind regards and keep smiling...people will wonder about you!!

Maybe it's the midi thing.I've downloaded some atari games and they run fine in gemulator and pacifist.Still can't use any of the disks he has for his atari on the pc.Is this normal? The Pc can read the Breakthru disk but can't load it properly.When we use the emulators to load some other stuff they come up as if nothing's on the disks or the disk data may be damaged.We're trying to get this thing working mainly for the Breakthru program cos my dad loves to play music and has used Breakthru to sequence a lot of his stuff ,he understands what to do with it.I got him a pc and put cubase and evolution on it with some smaller sequencers but at 65 years old he's finding the learning curve rather difficult.Maybe I can find Breakthru on the net and try that.I'm not sure if the problem comes from reading the discs or what.They work fine in the atari. thanks for your help

We've found that when using the atari.if the files are saved with a .mid
extension we can open these on the pc.The files have been put onto a floppy
that was formatted in the atari before saving the files.Yet when we did a
copy disk on the atari to copy breakthru onto another disk the pc couldn't
even read it.Though it can read the original breakthru disk(just can't load
it)
I don't know much about midi or sequencing but I think we'll work through
the Pc software as you suggest.Thanks
Know anything about cubase :) just joking.

Was HD-driver ever updated to patch TOS to allow drives above the
letter P? Given that new drives are nearning 10 GB, it usually
means that we near or exceed P rather quickly...

Well, it's written in the docs (I think), and in all the online helper
files.

> Anyone setting up STing should therefore should not underestimate the
> importance of HSModem :)

Of course not. Even if you don't use STinG, HSModem is a must have for any
serial port communication.

Those internal modems are crap anyway, I just bought one for my PC and it's
really bad.

STinG has masquerading capabilities which allows you to network both
computers together and have the PC run as a gateway for the F030.

In case you're referring to the drive's capacity: There is no limit at all. There is only a limit imposed by TOS on the maximum size per partition. TOS 4.0x supports partitions up to 1 GByte.

You can't patch TOS, you have to replace GEMDOS. That's what Big-DOS,
MagiC or MiNT do. The hard disk driver can't do this job alone.
With Big-DOS, MagiC or MiNT HDDRIVER has supported drives beyond P: for
quite a long time.

There's nothing you can do in the driver (BIOS-level), as the problem is
actually in GEMDOS. Use Big-DOS to access drives Q-Z and 1-6 under TOS.

Ciao

Thomas

>means that we near or exceed P rather quickly...

I don't know whether this helps, but I am/have run out of drive letters. I did come across a program that allows the use of assignment that use something similar to the following: a1, b1, c1.... or aa, bb, cc...

I have 18 drive allocations taken up with my CD-ROM's: letters I to Z. I think I have had hard drives between P and Z. The only problem I found was with some programs/GEM not allowing access to drive assigned letters greater than P.

IIRC the only way I got around this was editing the drive and directory field by hand by putting something like Q:\ etc.

From: mjaap@atari-computer.de
Message-ID: <7qggomfrk1@nnrp1.deja.com>
Source record: 73857

It seems that we have to use PNG or JPEG in the future - Unisys (owners of the LZW algorithm which is used for GIF) went crazy (once again). They are demanding that web sites pay them $5000... doesn't seem to be one of those typical internet hoaxes but judge for yourself: http://burnallgifs.org

Information about PNG support in browsers: http://graphicswiz.com/png/pngapbr.html

I guess there aim will be rather the commercial sites than the private ones (hopefully).

> How big intern harddrive can i use in Falcon?

How big you want. The only one you have to watch is the
size of 1Gig per Partition.

Example: 9 Gig Harddrive = 9 Partitions each 1Gb = logical
devices (Desktop) from "C" to "K"

Use a 2.1 Gig Toshiba MAT IDE by me self. Space enough for all.

CD-ROM drive letters are handled differently than those for hard disks.
You can compare both mechanisms. MetaDOS cares for CD-ROM drives.
Note that in case for some reason you cannot use Big-DOS, MagiC or MiNT
you can get additional drive letters by telling HDDRIVER to reserve the
drives A: and B: for hard disk partitions. Of course this doesn't make
much sense if you have two floppy drives connected.

> IIRC the only way I got around this was editing the drive and directory
> field by hand by putting something like Q:\ etc.

Yes, but this is a restriction of old file selectors, not a restriction
imposed by the operating system or driver software.

I haven't had this problem myself (doesn't use Geneva much), but if you
install TosWin2 you can open a console which will capture all these
messages and hopefully help you to find out what's going on.

If you can't get TosWin2 to work under Geneva or have other problems, just
send me a mail and I'll do my best to help you out.

> You can't patch TOS, you have to replace GEMDOS. That's what Big-DOS,

Since I need to be able to re-assign my CD-ROM to a letter
above P during bootup, I am currently running BigDOS _before_
Metados, but then MiNT adds its own shit over that.

However, BigDOS is far from clean. MiNT is less stable with it.

Since HD-Driver handles storage devices, it seems like the logical
place to patch GEMDOS for that...

What is the problem? You are using FreeMiNT, right? So there is no need to
use BIGDOS at all. Just change the entry in your CD-ROM driver sys

For instance (bdconf.sys). I'm using Betados with the Spindriver

*BOS, c:\auto\spin_sd.bos, A:9
*DOS, c:\auto\iso9660f.dos, Q:A

I do have the letter "Q" assigned now for my CD-ROM

There is no easy answer to the need for a supported browser
with lots of new features like Javascript.

If CAB has reached a dead-end and the current alternatives
are not stable on enough of the various Atari platforms then
perhaps we need to develop another browser.

Ideally this would be an open-source project like Mint so that
everyone can contribute to its development. It should work
under Magic and Mint and utilise a tcp stack common to both
OS's. I think STing fits the bill. I am not a C programmer but
that would be the obvious language choice or maybe use Enchant
with HiSoft Basic as a speedier route?

Does anyone feel like taking up the challenge? Does anyone have
any code that could be used as a starting point ? Are there
any other open-source browsers that could (legally) be used as
the basis for a new Atari browser?

That's my consultancy bit done, over to the developers ;-)

Peter

>1) 233Mhz K6
>2) 166Mhz Intel Pentium
>3) HP 7000/712
>
>What about the rest?

Hi Mark,

well, I joined the SETI stuff last Thursday and rite now the PC is working
on block #7.

Apart from the first block, which was crunched in 19 hrs 51 mins because I
had it display the graphics most of the time (!) all my other blocks have
been done in 10-11 hrs (with gfx mode off).
I'm running the app all the time, the set is on for 24 hrs/day so except
when I'm running Linux on it I can use plenty of time for SETI. ATM I'm
doing two blocks/day :-)

I'll probably get the stuff running for Linux as well.

Over here a 450 MHz P-III.

Now I don't think I "belong" to Team Atari automatically, but you can add
me to the team (Joe, you reading?) BTW, is there a dedicated site for Team
Atari?

Too bad there ain't a port for Atari, since my TT runs 24 hrs/day too...

Plans are to get Win running thru' VM on the Linuxbox, so perhaps I could
crunch two blocks at the same time in the future?

We have been running our BBS with Michtron BBS software for quite a
long time now. We currently have 43 CD's attached along with a 1
Gigabyte drive. We use Meta-DOS to control the CD's. We patched
it up though so that it allows for lower-case drive letters and also
drive 'letters' 0 through 9. So our hard drive is C through N, the
CD's take up a through z and O through Z and 0 through 9.
We are in the proces of moving to a PC with Wildcat! though.
Unfortunately, we cannot currently configure that many drives.
On the other hand, big drives are cheaper now than all our
CD-Rom changers, which fail occansionally. So we plan on
getting a huge hard disk, and simply copying all the data from
these CD's to a couple of huge hard disk partitions.
Currently we have one Pioneer DRM1804X and four
Pioneer DRM604X changers, and one single CD unit.
We still have a DRM1804X as backup, so we could add
18 CD's more, but we would have to patch up Meta-Dos
even more. We also patched MBBS to no longer check
for valid drive letters, or converting drive letters to uppercase
characters. A lot of patching. We also patched MBBS to support
19200 baud connections. But 56K is standard now. Who uses
a BBS anyway nowadays, since Internet is so popular.
If you use other software, you might have to patch all that too.
Most software will not even allow you to select drive letters
above P. On the desktop, you cannot create drive icons for
drives with lowercase letters. Keep on patching...

Anyway, to return to your problem, Meta-DOS is designed not only to
handle CD-Rom stuff. With the proper driver, you could add hard disks
as well. With standard Meta-DOS you can get up to drive letter Z.
Of course, you will have to find someone willing to write the driver.
I am sorry to say that this is virtually impossible. There are not
many programmers left on the Atari platform.
You could also use bigger partitions. TOS 2.06 supports bigger

partitions I believe. We had a 320 Megabyte drive way back in
TOS 1.0 times, and Atari could not handle it. We are all still slaves
of all this old CP/M stuff. Sigh.....

Some newer machines let you use drive names. But this is all of
no use to Atari folks, unless we all get together and write something
to solve all these problems ourselves.

Keep those machines humming.
Regards, Ernest.

Hello Olivier,

I've tried going to that site, but my browser just hangs at "resolving host". I then tried the number addy, and it "seemed" to connect, but then it hung at "waiting for data". I'm using single TOS 4.04, Stik, and CAB 2.7, with Dan Ackerman's latest OVL. Maybe I need CAB.OVL V5.55?? ;-) Also, does this one work with single TOS, or is it only for Magic, Mint. etc.? I've also tried accessing the site using Newsie's url feature, but no luck there either. Am I doing anything wrong?

Message-ID: <7qhede$m39$1@hermes.achilles.net>
Source record: 73883

Hi there, I am using Cubase Audio Falcon and I would like to use the Midi
only version. I bought the software as a package from someone and the midi
version was included.(V.3.10) When I tried to boot up the midi version I get
the "No key Goodbye" message. But the dongle was inserted and CAF 2.06 works fine! Surely
you don't need a different dongle to use the midi only version
of Cubase?
Do any cubase users understand this, and is there an installation that
you have to do to get cubase to recognize the key?
Thanks for any help,
Mark

3895. ATARI MIDI SERIAL OUTPUT?

Source record: 73885

Hi,

TB>There's nothing you can do in the driver (BIOS-level), as the problem
TB>is actually in GEMDOS. Use Big-DOS to access drives Q-Z and 1-6 under
TB>TOS.
if someone is interested I could provide PARTS (by Hans-Peter Vetter,
the author of OPTIMIZE).

PARTS is to switch on and off partitions on IDE, ACSI and SCSI drives.
E.g. you can have 20 logical drives on our disk, but TOS only
recognizes 16 (2 floppies, 14 drives) so 6 aren't available for the
moment. So switch off 6 you don't need for the moment and reboot.

Ok, one disadvantage should not be hidden: Absolute paths on the
drives "behind" the first switched off drive won't be correct anymore
(up to the moment of switching it on again).

Sometimes I use PARTS to get access temporarily to drive Q (impossible
under normal TOS).

Remarks: Program size 115k (unpacked)
Doc (german) size 5 k
Untested yet for IDE and ACSI drives

> back it up...it's a neat trick :-))

Hi,
Besides the Yamaha A3000, I've made CD's for my Kurzweil K2000 and a friends' E-MU ESI32, so it seems like it works nicely for all samplers :) Haven't tested AKAI yet, but since the K2000 can read AKAI CD's, I'm absolutely sure it works on those too. It's a really great function and if you have a SCSI CDROM besides your burner, you can make copies of foreign format CD's too - however, if it's a mixed mode CD, the audio tracks won't be audio tracks on the destination... :(
CDRecorder is the only burner program that does everything a burning program is supposed to do. It's more expensive - but you'll get great functionality for the extra money :) Audio burning with full PQ-coding including individual pauses between tracks, ISRC-code, copy-bit on/off, indexes etc - and data burning with Atari mode, DOS mode, Multi-session etc...
Get a demo version from www.soundpool.de and check it out.

3900. Geneva/Mint/Thing and printing

Newsgroup: comp.sys.atari.st
Date: 1999-08-31 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <YeHy3.1003$tW6.1847@news.flash.net>
Source record: 74041

Hello!

Since NAES is still not sold in the US, I've found a great alternative that seems to work very fast, especially for Internet stuff: Geneva (r.6), Mint 1.15.3b, and Thing 1.27. It actually seems faster than Geneva/NeoDesk 4! But there's a snag: When I try to print from AtariWorks or CAB, Mint crashes, flashing some PID error (to fast to see exactly what it says). Has anyone else had this problem? Anyone know what to check? This setup also doesn't like GEM Bench, either. It freezes while checking the FPU and ROM access. Fortunately these are the only problems I've run into so far. If I can solve the printing problem, I can live with the rest I think. Any suggestions? Thanks!

I recall Kris Krowchuk quoting some Atari sales figures, saying that
3 times the amount of TTs were manufactured. For North America, it
was something like 6000 Falcons and 25000 TTs.

>Clayton Murray

Howdy Clayton,

Try this: http://services.worldnet.net/vcf-com/ob/sti_cli.htm

For some reason, CAB can timeout at the other URL. Oliver's site is a bit
difficult to navigate. He's got some excellent info about networking Atari's
using STinG. His latest OVL does work well, but still has problems getting
cookies for CAB v2.7. I'm glad he's still working on it. Too bad someone at ASH
doesn't take over for Alex in upgrading CAB, it's long over do...
If CAB had 1/5 of the improvements of iCAB, it would be damn good <g>.

CU,

Charles

So out of curiosity, how did you get CAB to work with MagicMac?
Will it work with the MagicMac demo so I can try it out?

I have to admit, I am finding the MagicMac demo limiting. What
improvements come with the full version?

Doctor Clu

There is a DIY text file out there that adds 1 Midi out to the serial port,
which gives you 32 midi channels and will allow you to run at least 6
devices if you use Midi thru. Unless you're Jean-Michel Jarre or Tony Banks,
that should pretty much be enough. Then again, I doubt that Tony Banks is
still using a 1040STE.

I remember someone posting it in csas once. Have you tried Deja News ?

Otherwise it might be on Vezz's hardware hacks page:
http://www.geocities.com/SiliconValley/Way/8016/atari/sth_tech.htm

There is also a driver for Cubase.

I succeeded in downloading the CAA.OVL 5.55.Of course I tested it in
speed with my test-url :http://www.skeelerbond.nl
It's a page with some pictures and graphics.I tested at 23.30 PM with

a TT030+4 MbSTRAM/4MbTTRAM/CrazyDotsII/NVDI 5.2/MagiC6.1/Jinnee
2.1/Cab 2.7e (full options)/Sting 1.15/Worldonline (provider)/Modem
USROBOTICS 33k6

Well.....this latest update of Olivier did 2m50sec in full
downloading..
Some figures I got by testing the former update of Olivier, the latest
original CAB.OVL from ASH, the latest Dan Ackerman OVL.I also tested
with IConnect, the ASH stack
Sting - CAB.OVL(Olivier) 2m40sec
IConnect - CAB.OVL(Olivier) 3m29sec
IConnect - CAB.OVL(ASH) 2m58sec
Sting - CAB.OVL(Ackerman) 2m47sec

Perhaps somebody will do some testing also, I don't know if you can
all test with this homwpage about inline-skating, a very popular
sport in Holland !

The game Reeking Rubber is a Lotus clone for the falcon. It has been
under development for about two years now. The latest demo version,
which is one year old, can be obtained from:
www.dtek.chalmers.se/~d98gilda
This game is still under development, and a new demo version should be
out in a few weeks.

What do you mean by 'errors in the compression', I downloaded using CAB 2.7 and decompressed using ARCSHELL with LHA310. No problem. If you want this version of LHA, very much like STZIP, then yell, also yell if you want Wensuite 3.20c. Works straight from desktop, without having to have HSModem activated.

I think this has been covered here before, but can any one recommend a good tracker. I'm going to register with Graoumf, but like the look of StormTracker for its use of standard stave/note notation. However the home page seems dead and an attempt to register online indicates that they (whoever they are) only accept VISA or Barclay Card .. don't use either. So where do I get StormTracker from. There is a 'tracker' demo from SoundPool, but this does not seem to be a tracker program as I know it.

Bob King.

There will be an Atari fair in autumn (probably end of
November/December) but hopefully not another flea market (bah!). I want
to see new software/hardware there - at least I have to prepare a new
program until November.
BTW, official announcements should soon be available soon or it would
be too late to do the fair this century (programmers have to be
informed to update their programs, a hall has to be organized,
companies must be invited etc. - this usually takes two month)

Let's not forget that there's also Stafford in November!

Greetings,
Matt.

If you download with Netscape, you have to press the shift key in the
mean time you click on the archive's link (refering OXO).

Sorry Martin, I'm only human. :-)
Anyway, the drivers for the Hades be it the ATI Mach64 or older ET6000 can
not be downloaded from the ComputerInsel Nova Mailbox.

>Are ComputerInsel still in business?
Yes, they still develop the drivers for the Mustek and HP scanners. Usally
when a new NVDI is released, they adopt the NOVA drivers also. I think that
work on Photoline has been put on ice though...:-(

>> Up to 6x the SCSI interface can manage.
>
>Maybe you are wrong here because A LOT of CD Writers (even recent models)
>don't accept to directly copy from an already existing audio cd ...
No, I'm not wrong...6x can easily be achieved with a Falcon or TT, I'm speaking of personal experience here. It's not the CD Writer which doesn't accept direct copying, it's the combination software/hardware that fails. CD Writers are "dumb", when they encounter an error they will send an error code but that's about it.
When SPIN is installed, You can drag the WAV files straight into CD Recorder Pro, to burn at 6x You need a CD ROM Player that can handle at least 10x speed. It is VERY important that the player is not of the latest generation. The latest generation CD Players don't have a constant speed. They use a system called CAF. A player with CAF has the nasty tendency to stop for a couple of seconds and then continue sending data on the Atari. If this happens the datastream is not sufficient and as a result you get a "buffer under run" error. CD Players that are perfect for the job: TOSHIBA 12x and 14.4x, SONY 12x, PIONEER 12x and 16x, PLEXTOR 12x....

>Let's have a look at the impressive Toast user manual list ...
>Of course, for the moment I don't use my CD Writer on my Atari but as soon
>I receive "CDWriter" from Anodyne things will change.
Compare the "impressive" Toast feature per feature against CD Recorder Pro, and You'll see what I mean. Apart for the manual there's not that much impressing about Toast. If You compare Toast with CD Writer, it is impressive but keep in mind that CD Writer only offers the very basics.

>>>Ten: Go out, have a Belgium beer, enjoy life :-)))))

>>files to a CD-R?
>
>CD-Writer Plus from Anodyne Software does it very well and is cheaper than
>CD-RECORDER !
>http://www.cyberus.ca/~anodyne/

Yes and No..
CD Writer Plus only offers the very basics, one can create Audio CD's that don't follow the official CD-DA norm, and make simple backups of a standard partition. I suppose this is enough for some people, but for most of us this simply will not be good enough.

Mixed Mode, CD Extra, RED Book, Yellow Book are all absent, and not promised for future versions. Making backups of your files with the archive bit set is also very important, in the next session only the files that have this bit changed will be copied. This important feature is not implemented if IIRC. Making backups of non-standard TOS partitions doesn't work either. So backing up MAC HFS, LINUX or even a >512Mb Atari partition is not possible. Only being able to backup partitions is not very practical either. Sometimes one wants to make a backup of files that are on several partitions...

CD Writer Plus only offers the very basics, with CD Audio thrown in as a tastemaker. It is cheaper then CD Recorder Pro, but it's in a completely different class. CD Writer Plus is a backup program, while CD Recorder Pro is a CD creating program. The difference in price isn't that big anymore either.

Source record: 73915

```
take it as nos50.lzh or nos50030.lzh for 68030CPU
at http://www.interware.it/users/mike/pub/

PLEASE TEST IT!

- nntp bug fixed, posting article worked only if nntp trace>=3

- added multiple serial ports support, specify BIOS number:
# if port 0 type dev buff MTU baud
# --- ---- - ---- --- ---- --- -----
# AUX:
#attach asy 1 0 ppp pp0 32767 1500 57600
# modem 2
attach asy 7 0 ppp pp1 32767 1500 38400
# serial 2
attach asy 9 0 ppp pp0 32767 1500 57600
# modem 1
attach asy 6 0 ppp pp2 32767 1500 19200
BIOS numbers for port are for a TT, for some reason to investigate
this does not work if you specify the modem1 port as the first device.
no dsr/drt up/down support for the moment.

- bugfix: domain cache list bombed ( ARGV1 instead of ARGV0 )

- added domain cache dump to reset cache

- bugfix: this was a very OLD bug, detaching of asy interfaces didn't
work as the asy pointer was not set to NULLIF in st_asy.c

- add http support, new commands:
cab directory <path>: to specify where CAB.APP can be found
cab head <url>: to get header informations on a url
cab get <url> <filename>: to get and url and save it to file !!!
cab start: !!!!!!!!!!!!!! yes this starts the browser ad then you can
navigate, cache is supported, POST is still NOT supported, sorry, no search
engines !

- change in ftp server, directory listing is now unix-like, so
that you can use graphic ftp clients
the change is made to the dir listing routing, so all commands using
the dir() function are affected, i.e. "dir", "ls", etc.

- bugfix: it was impossible to set the INLINE dialing on

- bugfix: telnet to a wrong port passed by name now works
the resolve routine to find the port number can be used
keeping in mind a wrong name makes it return -1, but
```

fsocket->sin_port is unsigned short

- new SEND command to send strings to any port:
send <host> <port> <strings>...
port can be specified by name as telnet

- log changed: no more debug log in smtp client and dialer
no log of memory allocation at startup
log of PPP/PAP session

- nntp client change:
headers received are put in the "get" file if session aborted
killed or exited, and articles are not get, so you do not loose
articles when NEWNEWS is not available (STAT, GROUP)

- changes in dialer display, please test

- CAB POST implemented, try it please on search engines and forms!

- NOS GEM created !

- shell command implemented, attention all NOS functions stop
until control returns to the program

- hostname setting from host cfg form, added helpfile

- ip address setting from host cfg form

- new command to test ftp problems of Bruno Kozlowski:
"tcp precedence [ON|OFF]"

- redesign of the "dir" command, new "-l" option, "Dir" session,
new help file

- domain suffix setting from host cfg form

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

> So what's the idea behind setting the steprate in hardware?
>
>
> MG

The idea was that I got sick of using TOS 1.04 and having to boot from a disc so I could use the drive, I don't have TOS 2.06, which I'm not 100% but is supposed to auto soemthing like step rate to 6ms for instance.

this boad I've done doesn't care one bit what TOS you have, in fact no matter what ms rate you try to set the board will change it to 6ms, also reading back the value no matter what you write will read back as 6ms, comes in handey to see if the board is working and installed as well :-) I hope to get a full PCB etched and installed in my other ST to test it out also with Drive B external support.

Chris

You can put netBSD on your Atari and run the SETI version for that. I am not
sure how fast the Atari will be though.

STinG has masquerading capabilities which allows you to network both
computers together and have the Atari run as a gateway for the PC :)
Anyway, the PC can run as a gateway too. I do it with my PC running
Linux. The PC is a gateway for the Falcon and ST. Have a look at
http://perso.club-internet.fr/agaymard/network_e.html

>>anyways, A boot program to alter this on boot is ok, but is there any
>actual
>>way to hardwire the step rate to 6ms ?, DD discs will sound a little
>rough,
>>but once in 16mhz it will double to 3, thus no need for any software.

A while ago, someone here suggested using a monostable with a period just
a bit shorter than 3ms and triggered by STEP, to switch the controller
back to 8MHz. If I understood the idea correctly, the controller chip
does not have to be overclocked while STEPping over a HD floppy
(i.e. it is overclocked only for data-transfer?), so the original
3ms step-rate is retained.

I estimate that a circuit containing two TTL chips might do the job.

Two possible flaws with this idea are 1) the step-rate may be slightly
variable over time, depending on temperature effects on the monostable;
2) the clock switching would probably have to be properly synchronized
with pulse edges.

Cu.

Ah Ha! Just the kind of information I've been looking for. I just did the same on a 300MHz AMD K6-2 on a 56K modem (connected at 49.333). It took 1 min, 49 sec with a good connection (very brief timeouts). I'll have to try it again with the Falcon FX at 40 MHz.

Thanks for the info!

Yes, I have just bought a 6.4 GB for mine and will fit it soon. BUT: How should I partition it? I think I read somewhere that the boot partition must be a GEM and not BGM one, which presumably restricts the max. size of C:\, but to what? Uwe says that with TOS 4.x one can have 1 GB partitions with HDDRIVER7.xx, but is that *under* 1 GB or can I specify 1 GB? Also, any idea what the limits with ICD Pro Utils is?

Also, how many of the partitions should accept LFNs under MagiC? In fact, what is the downside of LFN partitions, if any? That they can't be read under TOS?

Regards, /Peter/

Disappointingly, Graoumf has now moved to the PC and the Atari version will not be updated anymore.....
There are few trackers that support multi-format mods on the Atari now - in fact, DBE Tracker seems to be the only one that is still being developped ! (This is available from STGhost/Sector One and the registration fee is very reasonable.)
I was speaking to Denis at PMP and, despite his MP3 player project taking up a lot of his time at the moment, he has already found a way to increase the speed of his DBE re-play routines and will be releasing an update shortly.

I hope someone else can give you info on StormTracker as it is not one I ever used.

Jim

This is wrong. The boot partition is allowed to be a BGM partition and
can be as large as any other partition. There are no restrictions for
the boot partition at all.

> of C:\, but to what? Uwe says that with TOS 4.x one can have 1 GB

That is *under* 1 GByte.

LFN? What's that? Long filenames? TOS will only see the short filenames.

Does any of these trackers (or better the associated players or
replay-routines) support XM (the latest format, unknown for example to
the MegaTracker/MegaPlayer) and/or .IT (AFAIK an extension of S3M)? It
seems the Atari platform lacks of a decent player for these widely used
formats (if you think this is provocation for soundtracker coders then
you are so right :)...).

> now - in fact, DBE Tracker seems to be the only one that is still
> being developped !
Perhaps FlexTrax (http://newbeat.atari.org/projects.html) will
handle this one day (at least there should be some kind of converter to
its own format)...

>specify 1 GB? Also, any idea what the limits with ICD Pro Utils is?

Hi Peter,

Using ICD Pro 6.5.5, I have a Seagate ST32151N (2.1gig) split into 2 fairly equal partitions. I only use this drive for audio recording, so I'm not booting from it. I'm using a Falcon with single TOS 4.04. From the desktop "show info" shows (on one partition which is empty) 1,072,922,624 bytes. Diamond Edge says it's 1,072,857,088. ICD partition software says it's 1,073,08x,xxx. (It doesn't show the smaller numbers). I don't know why they are a little bit different. I also don't know for sure if the computer can actually access the entire partition, or only up to 1 gig. I haven't experimented yet.

I hope that helps, and doesn't futher confuse the issue.

Sorry if this question has been asked 400,000 times before, but has anyone gotten Sundog to work perfectly with one of the PC emulators. I've tried Winston and Pacifist and the best I can do is get it to run for 20-30 minutes at a time. I've seen other people refer to the same problem on the dejanews archives, but I've seen no reference to any workaround.

Oh well, maybe I'll just have to buy an ST:)

Any assistance would be appreciated.
Thanks

Mark Friedman wrote in message <7qk421$3fq$1@hermes.achilles.net>...

> I think you can use the Logic 2.5 key with notator!

Not strictly, the Logic key won't work with a normal copy of Notator.

When Logic was released, there were certain things in Logic (like the score page) which weren't as advanced as NSL, and as many people were used to NSL it was decided to include with Logic a specially modified version of Notator (V3.2, 3.21) that would indeed work with the Logic key (as the NSL key had to be returned in order to upgrade).

So if you have Logic, you probably already have Notator - if not, you can probably get hold of the Logic-NSL release package (as the only people who could use it would already have a key).

I took advantage of this upgrade not to get Logic, but to upgrade my Creator SL to Notator SL. But I exclusively use Logic now anyway, as it's a much more powerful program.

I have completed Sundog on the Winston. I have played in hour or more sessions with no problem at all. You may want to try playing with the options in the preferences or changing the TOS version. I think I used 1.04 or 1.06. If that doesn't work, I'll sell you my 520ST system for $100 (minus the mouse).

Sorry guys !
I didn't pay attention to the sender, but Olivier, let me tell you that I admire and support your work very much ! Your kind of guys (sorry girls, another excuse.....keep excusing) keeps the Atari-flame alive ! But I wonder if it's technically possible to build the Internet -GIF's faster? For a strange reason many guys in Holland cannot get online with Wensuite 3.20, so we cannot test it if there's a faster GIF-building....
IMHO, I don't see any use of Internet testing with PC-gear, we all know, that goes much faster, but that isn't the issue.
So I was glad to read that on Hades and Milan Internet goes faster but.......why ??? The processor ? The modem 56K ? ISDN or TVcable connection ? or CAB.OVL ???? The first three aren't much of interest to me, I can imagine that using faster gear means faster Internetting. It just this piece of software CAB.OVL, made by three different people (Dan, Olivier, Mr.Ash (Alexander Clauss in the few minutes left after counting his ICab money ??? Sorry , apologies again.....must keep my big mouth shut) in combination with the Sting stack and the IConnect stack.....Perhaps Olivier can tell us someday , what this .OVL does and what it don't do.....
Thumbs up for Olivier !And Dan (but his last update was many months ago..)

The Dungeon Master II is for the PC-- apparently 386. I have
(by accident) the original TOS disk for the game. I dont think
it is anywhere on the net. Perhaps it is, but I havent seen
anything. Check with INTERPLAY, they are name in the PC version
I have.

send them to catbird@airmail.net

I am playing both games now and I am interested in the structure
of the games. On the PC version the problem was "earning" enought
money to buy weapons and armour. So I am about 3/4 though the
game on the PC.

I just started the atari version. My MEGA 4 runs it just fine.
sound is peculiar though.

Hallo Guillaume,

GD>Could you upload it on LIP6 and/or Atari Funet and/or Atari
GD>Belgian (this one is in bad need for a name AFAIK)...
please explain me how to do so. I've got internet access and know how
to download, but I never did an upload. :-(

GD>... so I can test it for IDE on my Falcon?
Yeah, and Hans-Peter will appreciate any results.

I'll send the file PARTS.MIM via the net to you. D'accord?

Peter

3995. Re: [update] CAB.OVL 5.55

Newsgroup: comp.sys.atari.st
Date: 1999-09-02 00:00:00 UTC
From: John Kolak <jkolak@jps.net>
Message-ID: <37CF3B77.FBA458D8@jps.net>
Source record: 73978

Well, it took about 3 minutes even on the Falcon FX running 40 MHz CPU & 40 MHz bus in TT RAM with STinG and CAB OVL 1.3101, but I only have a 28.8 modem. I'll have to give it another try with a 56K modem. I did notice the Modem light was off frequently while CAB displayed the messages, "Loading Image" and "Converting Image" before it requested more from the server, whereas on the PC, the Windows green lights stayed on all the time. However, I've noticed in the past when I've used the external modem on the PC that the Windows green lights lie. Those lights will be on when the modem lights are off.

Oh, P.S. - I noticed someone posted an 11 second speed. I got the same
after it was in the cache. Clearing disk cache wouldn't increase the
time either, apparantly it stays in RAM cache as well. Only quitting CAB
would cause the time to go back to normal.

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

For Atari Sales and Service from someone with nearly 20 years of Atari experience go to my Web site below or E-Mail me at atari@benjamin.net where you can find for the Atari 8 Bit coveted Happy Drives and other Disk Drives modified for increased performance and speed. As well as a library of Reference Materials from COMPUTE! Books. You can find NEW Atari ST software Marked down in Price, Disk Drives made by Indus for the Atari ST and Reference Books Published by ABACUS and I've added and will be adding more Hardware, Software, Books & Accessories for Classic 8 Bit and Atari ST. So checkout what's new on my WebSite. And remember if you dont come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to meet with other Atarians. Read the Ad near the bottom of this message.

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. We meet the 2nd Tuesday of each Month. Our Next meeting will be Tuesday, September 14th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. Get together with other Atarians. Make friends, meet new people, maybe find an old friend. Eat Pizza, drink Pop & Beer in a decorative atmosphere. Bring your family to a family friendly place. For more info try:

http://pac.pdxweb.net

e-mail: atari@benjamin.net

For more information or directions, please call our Vice President
Ben Smith at (503)256-9974 See you there!

Posted this on the ST and 8-bit newsgroup.

Disk commands? Do you currently have a disk with a disk operating
system on it? The Atari DOS's had some nice straight forward menu's...
at least much better than the Commodore. ;)

Well, one can use POPWatch and NEWSWatch with IConnect :-)
The dialer itself is not the problem: just the different TCP/IPs are.

Bye,

Well, the only reason I ask is because Teli for connect is getting pretty good. It's the ONLY decent telnet cliet for the ENTIRE atari platform I've found so far. The only thing that comes close is to boot up Mint-Net on and run gnu telnet inside TosWin.
Even so...the term is not quite (right), lacking basic scrolling capabilties. Oh, and I've seen gnu telnet work inside CoNnect before as well. Looks great, thoe when I tried it on my Falcon a while back, key input was horribly SLOW (yes, even localy, I.E. telneting to same machine).

I'd really much rather stick with STing, since I do network a Falcon and Mega via MIDI. BUT...I REALLY REALLY desire a good telnet that is vt102/ansi happy, has cut and paste/clipboard abilities, and doesn't really mess the screen to hades and back.

Brian

4009. Atari Icon Library

Newsgroup: comp.sys.atari.st

From: Joakim H&#65533;gberg <gokmase@my-deja.com>
Message-ID: <7qp24uork1@nnrp1.deja.com>
Source record: 73804

Greetings all,

It struck me some time ago that icon collections are easy to find when it comes to PC and Mac but for the Atari there have not been any so far. After thinking about it I finally decided to give the idea a go and started to look for icons to add.

You can already find some really nice collections used with kind permission from Hallvard Tangeraas, Katherine Ellis, Nick Ripley, Jan Daldrup and Bernd M&#65533;dicke.
Add to this some windows icons that I myself have converted to Atari format, and you have a fairly good starting point when it comes to Atari icons.

I hope that the page can become a place for Atari users to share icons with each other. If you have some nice icons then please consider donating them to the Atari Icon Library. Lets share! :)

Drop in and have a look! (URL http://gokmase.atari.org)

Best regards,

Joakim H&#65533;gberg

tested from my office, it took 41 sec (pentiumII, T1)

4011. How to put Atari ST keyboard together...?

Newsgroup: comp.sys.atari.st
Date: 1999-09-03 00:00:00 UTC
From: Gucek <gucek@transprojekt.com.pl>
Message-ID: <3WSz3.22512$Qh1.326931@news.tpnet.pl>
Source record: 73806

I mean - whats about that wires under "Enter" and "Space"? I dismounted an ST keyboard about 3 years ago to clean it and and then didn't have time to put it together. And now I don't remember how did these two keys exactly work :). I suppose there should be something more except that wires? Help! Please send me a "sollution" to an e-mail addres, too.
greetz

p.s. And if you could tell me size of screws I will be grateful...

The wires are not critical to the functioning of the key. They just provide stability to the larger keys. Putting them back in place is a bit tricky, but having done it quite a few times, I've gotten pretty good at it. Doing it the first time is like solving a Chinese finger puzzle, but it can be done. Make sure you have the little plastic guides for the wire that snap into the underside of the key.

But this is supposed to work.

If you could be a bit more specific (boot messages, in which way did it
not work), we could possibly help you resolving the problem.

Adding BigDOS certainly will not help, as MetaDOS is independant of the
underlying GEMDOS.

Yes it was. I remember a visit to Atari Benelux in Vianen Netherlands
special organised to bring the TT with Unix on the market.
But the demo was a disaster: no network, no X11, only basics, no
knowledge. Real info on paper came later especially about VME-bus.
Price was euro 1300 for Unix alone and a TT had to be 'fixed'
internally to perform.
In those days that was cheap but for the workplaces where they use
Unix price is not a problem, incompatibility and no support are.

Met vriendelijke groet,
Ronald van der Kamp

Silly questions doesn't exist, only silly answers.
May I ask you why you ask this?

Now to answer your question. No, I don't have a Disk drive SCSI ID 1

My setup is like this:

IDE 0.0 (I boot from here)
SCSI 0.0 Zip drive
SCSI 1.0 CD-ROM
SCSI 2.0 HD

Source record: 73816

Alright, tried the test on my system...

Atari 1040ST 4 meg/AdSpeedST 16mhz 14.4K
Cab 2.7
Cab.Ovl (Version prior to newest I believe)
Stik

Before the overlay change... 25 seconds!

Oops!..sorry, I forgot to turn on the images, animated GIFs.... :)

Alright, before the change, 5 minutes, 37 seconds.
After, (bad connection) 6 minutes, 55 seconds.
Try # 2 (Partially Cached?) 3 minutes
Try # 3 (restarted) 6 Minutes

And there you go, about what you can expect from Just Your Basic Online
Atari Computer from 1985... ;)

Doctor Clu

PS: What where exactly is the URL for the CAB.OVL? I downloaded it
one night, and then tried again today and couldn't find it.
Was going to include this in our club newsletter, but would
like to have a good URL first.

Frankly, I am baffled by this one...

GEMJing doesn't work on my Milan most of the time. However I have found that if I start Newsie beforehand then GEMJing will play some samples, sometimes. If I then quit Newsie, GEMJing stops working.

Occasionally I have to re-run the MCSOUND.PRG from the AUTO folder to persuade GEMJing to play any samples.

This trick may work with programs other than Newsie but I haven't found any yet.

How do I get GEMJing working normally ?

Peter

It should also (still) be available on a number of other locations, though
not necessarily in an Atari section. It can also be named "Info-Zip" or
"InfoZip" something.

The C sources for Zip2*/UnZip5* are freely available and there are archives
around that contain the source code for a variety of platforms: Atari, Amiga,
MS-DOS, Unix, VMS... In those archives there are also sources for programs
Zipinfo (listing archive contents), Zipsplit (dividing a large archive
into smaller ones, to fit on floppy disks), and Zipcrypt (encrypting).

A couple of years ago I downloaded the sources from a local BBS (not working
anymore, I think) and compiled it at the place where I work to run on a
VAX/VMS system. We use it very much ever since, it is very reliable, though
a bit slow- On a VAX which is about 10x faster than Atari ST, this program
seems to work about as fast (or slow) as STZip on an Atari.

>
> I really don't see why. Installing HS-Modem is not a big deal.

The problem is that hack upon hack upon hack to fix various bugfixes is not a clean way to have an OS. There are (minor) performance+memory implications to every patch, but much more significantly, debugging setups when crashes occur becomes a nightmare when the patches and their installation order are of significance.

One of the reasons why HS-Modem are still needed is that source code isnt available for them and they work well enough for it not to be worthwhile re-writing them scratch. The other reason is that since not all machines require the patch (depending on patch obviously) it is not seen as a good idea to incorporate into the OSs as most of the time it would be redundant code. Really the whole thing could do with a re-design taking into account the wide variety of hardware, but that isnt going to happen.

Yes, I'm reading... moving my lips while I'm doing it, but I am reading. <G>

There isn't a site dedicated to TEAM ATARI yet... I'm a bit swamped right now, and I know I couldn't do it justice. But when/if things ease up I'll set something up. There are some really cool options out there right now for web pages, and doing it wouldn't be too hard... it's doing it RIGHT that can get a little tricky. <g>

Jeez, did I mess that one up or what?? <G>

I meant to add that there MAY be a way to participate in SETI@home with an Atari...

There is an OS available for Falcons, TTs, and, I assume, the new Atari clones, called NetBSD. It's available for free from ftp.netbsd.org. The directory you need is /pub/NetBSD/NetBSD-1.4/atari

Now, this is all speculation, but there is _a_ version of SETI@home for NetBSD on a 680xx machine (I forgot which one) that MAY work with NetBSD on an Atari.

I intend to give this a shot, but haven't had the time to dive into it.

If anyone gets a chance to try it out before I do, please let us know how/if it works out.

Joe Mirando

I could, and that might possibly make the distribution legal. But if the
original copyright owner opposes it, it would still be unethical.

I will have to think about that. At present I *think* that the original
copyright owner doesn't really care either way, and then it would be ok.
Can anyone confirm/deny this please ?

Yes, indeed. Whenever any software uses the blitter in a Turbo
mode, even TOS 4.x mode, my system goes unstable. Sometimes it
just results in miscoloured graphics, but sooner or later some
blit will bomb the system. That is also why I had to give up
using STOOP, because STOOP seems to go directly for the blitter,
even if system software has been set up not to use it.

>Been playing around in Tos 7.X Turbo. WOW, I thought Tos 4.X
>Turbo was Fast! Tos 7.X really Rocks!

I told you so ;-)
Actually it was sort of fun reading your praise of TOS 4.x speed
earlier, as I knew how you'd react when you tried FastRAM speed.
Now you can use Patrice Mandin's real DOOM port and other stuff
that never could be used properly on a standard Falcon.

>---

All of the above is correct except for the main cause of incompatibility
between old and new components. Actually it is a data structure in the
port drivers that has been redefined, to allow a new necessary function.
This affects all port drivers, both in STX modules and in STING.PRG, but
it also affects all other components that access that data structure, even
though they themselves are not port drivers.

It is true that there were significant TCP improvements, but that was not
the cause of any incompatibilities.

>randomly and intermittently. : -(

timeouts quickly and it happens randomly and intermittently too
^^^^ ^^^^^
(lightbulb shining brightly ;-)

Do you see the same pattern I do? The main characteristic of this problem is,
in several different ways, always connected with time itself, and the timeout
is itself a direct result of misinterpreted time.

Have you fed your realtime clock lately...? I think it's getting hungry,
or in some other way unhappy with the current situation.

I suspect that both Popwatch and CAB do their timing by reading system time,
and when the realtime clock battery is running out this will not be reliable.
Unfortunately this is very bad news on a Falcon, as the battery is built-in
in the RTC chip.

Another possibility is that your system modifications have somehow affected
the real time clock, for example by some micro-scrap of solder falling onto
part of the circuitry. Such a scrap will often not stay in one position,
but will vibrate around thanks to floppy, harddisk, and fan, thus explaining
why it sometimes works and sometimes not.

Have you tried the 'twist and shake' fix ?

In case you don't know it yet, thats when you disconnect external connectors
from the computer, lift it up so it's upside down, and 'twist and shake' it
a bit (you may prefer to remove the harddisk first). Surprisingly often that
will reveal all sorts of accumulated scrap inside, and quite often solder
scrap. Even if that is not the cause of your problem, your Falcon will be
happier to be rid of any such stuff, so it may be a good idea to try it.

Btw:
I hope I'm not putting you down by implying you might drop solder scrap.
I have myself worked professionally with soldering since the late 70's
and it still happens to me occasionally, without me noticing...

>
>The dsp in my Falcon must have a problem as I have also this problem
>with Aniplayer and 1ST-Guide.

Your two problems are not the same. The JPEG problem is only due to the
fact that the JPEGD.PRG which installs and handles the DSP routines for
the JPEG decoder only supports the most common of the JPEG variants. Some
other variants, such as progressive JPEGs, require some other software.

If you boot without JPEGD.PRG, or disable use of it in 1STGuide settings,
then 1STGuide too will be able to display most of the troublesome JPEGs.
You will recognize a progressive JPEG from the fact that the progress
'clock' (==the mouse pointer) of 1STGuide will 'spin' several turns, at
varying rates. 1STGuide does not display the picture progressively though,
so it only appears on screen when completely decoded.

Hi Terry,

>still reloads all the graphics.
>
>That's not to say it doesn't ever use the RAM cache. It does, but
>not nearly as much as it should. Not even close to 50% of the time
>it can, I'd say. And I won't even get into the way it uses RAM,
>which quickly leads to memory so fragmented, my 6 meg cache is
>virtually useless after awhile (of course 2.5 was no better in that
>area).
>
>Needless to say, I find the RAM cache implementation by far the most
>annoying thing about CAB 2.7. The thing is slow enough loading
>graphics and formatting pages without repeating tasks it doesn't need
>to. Makes me wonder who was doing the beta testing.

Well, I'm one of them, and I can tell you that we have had a great deal
to say on this and related subjects in our beta reports. But at present
I don't think the RAM cache works as badly as you say.

Instead I think that it may be due to inefficient HTML coding that you get
some of the effects you describe. To verify if this is the case, you will
need to check the HTML source of those pages, and check what URIs are used
for the pictures.

Quite often what we spontaneously regard as 'the same' picture as one used
recently (and thus to be read from cache) is actually not the same at all,
but merely another identical copy of that file. Many HTML writers simply
drop a set of their standard icons into each subfolder for HTML pages, so
they can forget about using any extra path info in the image URIs. And this
means that CAB has to load them from each such folder. Anything else would
be wrong, as CAB can't assume that files stored in different places are the
same merely because they have the same name and length, which is all it can
know without loading the whole file.

Then again, some pages use CGI scripts to generate subpages, and for proper update of script generated info these must be treated specially, meaning that they may have to be reloaded in some cases where a normal page would be taken from cache. This is partly controlled by the server too.

Finally, even when going to a page we have visited earlier, it is never correct merely to assume that the page has not been updated in the meantime. CAB must ask the server if there has been a page update, and if it states that there has, then CAB must reload that entire page. This will happen even for pages uploaded without any changes from their old form. The server will still state that they are 'new' even though unchanged, and you will see that too as an (in your opinion) unneeded reload. Unfortunately some servers are misconfigured, and then that will happen every time you enter that page, as the server always states that all files are new.

I said 'finally' above, but that doesn't mean that the list of possible complications really ends here. Only my stamina did ;-)

4053. I am back online again.

Newsgroup: comp.sys.atari.st
Date: 1999-09-03 00:00:00 UTC
From: dlanor@oden.se
Message-ID: <37cf3e4a58f6e5e@oden.se>
Source record: 73992

Hi guys,

after a really bad summer I'm finally back online again.

I took ill during mid-june and that lasted some weeks, and
then when I tried to get online again I found that something
had happened to my systems. Apparently some voltage spikes
on the power grid had damaged all connected monitors...!!!

I managed some repairs/replacements, but shortly later some
similar thing must have happened again, leaving me without
functional monitors again...!!!

I'm not a rich man, and simply could not afford to replace them
at once (again), and that is the main reason I have remained
offline throughout july and august.

A few days ago I finally aquired a decent monitor for use with
my Falcon (a 17" Apple multiscan), and a somewhat less decent
one for my TT (an old PS2 monitor with a bad luminance drag).
With these I've finally come back online, and hope to stay so.

I have read through all the old E-mail, though replies may be
delayed a little longer. I have not read any newsgroups though,
and considering the amount of traffic in them for so long a period
as I was offline, I do not plan to read any old articles, despite
the fact that I was involved in several discussions at the time.
If any of you here had any interest in those topics, and want me
to reopen them, please E-mail me separately about that.

Actually I just discovered that Okami still has in storage some
of the replies I had written but not yet sent when my troubles
began, and I have decided to send these too now, even though it
is likely that some of these replies are no longer relevant.

NB: As I have a lot of 'catching up' to do now, please do not
expect speedy responses from me for a while, and understand
that I may not have time to follow any newsgroups for a while.
This means that you need to use E-mail to catch my attention,
until I have 'caught up' sufficiently to have time for newsgroups.

Maybe there isn't one. One ST is never 100% compatible with another ST, so
you can't expect an emulator to be 100% compatible either. C'est la vie.

> Oh well, maybe I'll just have to buy an ST:)

Probably the best option you have!

>>Sometimes, ZIP20 is even capable to extract archives that STZIP
>>refuses to extract or where it complains about chechsum errors.
>
>That sounds like something useful for most of us, so where is it then ?
I missed this thread also :-(
Over the years I had to throw away a lot of work because of STZIP 2.6. The funny thing is that these error are not consistent. Sometimes it works flawless and on some occasions, one gets CRC errors. In my experience this happens most often when compacting files that are already been compacted (eg. GIF, JPG, compacted files etc)

Because the fault is not consistent, the only way to make sure that the archive is allright, is to unpack it immediately after you packed it. This is a crazy way of working. I switched to lharc, and have up till now never experienced any problems with it. the program is still developed, and the latest version 3.20b is compiled to make advantage of the 68030.

Has anyone else here encountered problems with STZIP?

Cheers from Belgium
Dennis

>having a modern looking dialer....which brings me on my wants-list of
>a modern looking stingdialer.The one we use now is a monster, ugly as
>can be.....
Sorry Jos, but you misunderstood me:
Ifusion is a small program that goes in the Auto folder. When IConnect
is active, you can run nearly all STiNG clients under the IConnect stack.
What I ment was that you don't need STiNG anymore and can delete the "ugly
looking monster" :-)
Ifusion is not released yet, currently it's in his final beta stage. So
you'll have to hang on a little longer to the "monster"
BTW: the beta version needs MagiC, it will not run under single TOS, this
might change when the final version is released, but I don't really think
so.

>According to Dennis Vermeire, who has eaten a rotten Dutch
>herring(fish) cos I didn't hear from him lately....
Jos, if you had any idea about what I have to do to get connected to the
USENET, you would admire my perseverance and send me a big basket of
"Zeeuwse Oesters"(oysters) instead of some rotten fish...:-/

Don't worry, I haven't forgotten about you and the whole bunch out there.
I'll be back in full strenght shortly.... better keep the women and
children
inside :-)

ST: None really. There is a port of 68K unix, but I wouldn't trust it.

Falcon/TT: well, there is a NetBSD and Linux. Both should require an 030
with MMU and FPU.

> I've read some
> of the history sites and see that there was a version prepared for the
> TT that had only limited release...

True. You'd be lucky if you found a copy of it. It was supposed to be sold
with the vapourware TT/Unix workstation.

The best option IMO is MiNT though, because it requires a lot less
ressources, is very Unix-like, and preserves TOS compatibility.

>Ouch! You're right!

Of course, the TOS can be patched to use 6ms as the default steprate, which means changing one single byte. Unfortunately there is a CRC checksum to be corrected as well. This checksum is at the very end of the TOS.

If you have machine language knowledge you'll be able to copy the routine within TOS 2.06 and generate yout own checksums.

Yes,- sometime STZIP terminate with a error, and wont extract the file
at all.
I have found out that sometime I can solve the problem by converting the
zip file with ZIP2TOS.PRG, to make a selfextracting TOS file.
cheers

Hallo Peter!

PS>GEMJing doesn't work on my Milan most of the time. However I have
PS>found that if I start Newsie beforehand then GEMJing will play some
PS>samples, sometimes. If I then quit Newsie, GEMJing stops working.

Very strange. On my Milan, GEMJing will work most of the time. There have been some problems when it was up to communicating with CAB, but these might have been due to a misconfigured OLGA setup and/or path information in CAB itself. The other thing is that GEMJing won't play rather big samples (say, 40MB), complaining about not enough ram available although the largest free memory block excceds this size.
But other than that, GEMJing works just fine. Testet under both M.AES and MagiC-Milan.

Hallo Peter!

PS>Many Atari users no longer use plain TOS but prefer Magic or Mint with
PS>N.AES and a replacement dekstop, why then do we still need so many
PS>patches like HS-Modem ? Isn't it time they were consolidated into the
PS>OS?

for N.AES (say: MiNT), this integration is under way. There is a new program
available on Frank Naumanns web site that is supposed to make HSMODEM obsolete.
Sadly, it is not perfect yet :-(

Hallo Martin,

MB>May I ask you why you ask this?
because I wanted to void to harm you.

MB>IDE 0.0 (I boot from here) SCSI 0.0 Zip drive SCSI 1.0 CD-ROM SCSI 2.0
MB>HD
If your SCSI bus is correctly terminated (on or in front of ZIP _and_ on or behind HD) I think there is no mistake you made unless the totalnumber of logical drives (IDE 0.0, SCSI 0.0 and SCSI 2.0) exceeds 14.

>>How do I get GEMJing working normally ?
>
>On a Falcon, I never did. IMHO it is shitware!

On my Hades 060 running freeMiNT/N_AES it works just great.
At first I did had a problem because the 'Liberty' (a system extension
which is needed for the file selector Freedom 2.x) and Gemjing doesn'
cooperate very well together. You see Liberty installs also a sound cookie
(McSn cookie) which causes problems. Following the advis of Jo Even
Skarstein (thanks) I changed all the McSn entries in 'liberty.prg' into
MxSx. This way that sound cookie isn't installed and GEMjing works again.

>I really don't see why. Installing HS-Modem is not a big deal.

It's not a big deal indeed. Anyway when one use MiNT on a Milan, HSMODA
isn't needed anymore. There is a special driver called 'uart.xdd' that
takes over the whole HSMODA stuff. No configuration at all. Just install
the driver on '/multitos' edit 'mint.cnf' (deleting the HSMODA stuff) and
ups one go.

Hi Peter

(it's a "o" with two dots over it ,dont you have it on a geman keybord?)

If you are going to use ftp some more, give aFTP a try, it's really easy.
I use it when i upload things to my homepage. I just connect with my ftpserver,
opens up disk d, then i mark whichever files i'm gonna upload and drag them
from disk d:s window to aFTP:s window and away they go.
Here's their URL if you wanna try:

Last Updated 09/04/99
- New items added
- Sold items removed

I have the following Atari ST components, software and manuals/magazines for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer, Vectrex or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST - Boxed with power supply and mouse
- Atari Mega4 ST - Boxed with keyboards/mouse/power supply
- Atari SC1224 Monitor 13" ST Color Monitor
- Atari PCT1426 Monitor 14" High Resolution TT/PC Color Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supply and Laser Printer Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supply
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Magic Sac 1 - Macintosh Emulator Cartridge (with manuals, but NO ROMS)
- Magic Sac 1+ - Macintosh Emulator Cartridge (with manuals and ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units

- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari (with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)

- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Magazines and Specification sheets Please make an offer
==========
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- A working DSS Satellite Receiver (with card)
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

Warnings

- Your page tag is too short. The <TITLE>
tag should be 5-15 words in length and include
your organization and/or product name along with
a descriptive phrase.

- Your META Description tag is missing. This is
used to provide a description of your page to
search tools.

- Your META Keywords tag is missing. This is used
to provide a description of your page to search
tools.

- Links within imagemaps may not be indexed.
Accordingly, you should have text links available
on the page as well.

Drive traffic to your web site!

4091. Fonts for Apex Media

Newsgroup: comp.sys.atari.st
Date: 1999-09-05 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7qt04p$emr2@news.ajou.ac.kr>
Source record: 73772

Apex Media users,

I've been looking for some good clear Fonts and have not been able
to locate any that I can use.

What I need is some Fonts that I can scale down in size to around
8, 9 and 10 in point size. Any that are similar to the Atari system
Font would be good. I could also make use of any Fonts that will
scale down and still be clear and readable below 8 in point size.

I also need some good Fonts that range from 12 to 36 in point size.

I have downloaded alot of Fonts from the Net, but most of them
appear the same and look bad and I have not been able to scale them
down to a small size that is still readable.

If you happen to know where I can download some good Fonts for use
with Apex Media, then pass along the info if you can.

Also, I was looking thru a small Buying Guide that came with ST Format
Issue 51. On page 16 there are 3 programs mentioned from Titan
Designs, IMPRO ANIMATE, IMPRO DESIGN, and IMPRO CAPTURE.
Not sure if these were ever made and released for sell. Anyone know
if these actually were ever produced and sold?

And, does anyone out there in the Atari World have a working or non-
working EXPOSE and or a SCREEN EYE for sale/trade?
If so, e-mail me your asking price.

Any help with this is much appreciated.

4094. Technical questions about MiNT and CD-ROM

Newsgroup: comp.sys.atari.st
Date: 1999-09-05 00:00:00 UTC
From: J&#65533;r&#65533;me Ginestet <ginesj@*.free.fr>
Message-ID: <rToA3.42$wC4.52276@nnrp2.proxad.net>
Source record: 73775

Some technical questions :

I'm looking for the structure of the "physical interface"
drivers for MetaDos (.BOS files)

Can MiNT manage IDE CD-ROM drives ?

Has anyone tried to put MiNT in an EPROM ?
(could be TOS for boot, then MiNT on a ROM-DISK)

Is MiNT able to run without TOS, once booted ?

Please help !

J&#65533;r&#65533;me

I don't think that there exists public documentation about this format
(mamybe something comes with BetaDOS)?

> Can MiNT manage IDE CD-ROM drives ?

Yes. For instance, you can use SPIN_SD.BOS, MetaXBS and SPIN.XFS
(requires HDDRIVER to supply the lowlevel IDE interface).

> javascript.

You can connect your Falcon and PC using an ethernet network. Herefore
you will need to buy an ethernet adaptor for your F030 and make yourself
a small ROM-port device (total cost adaptor + ROM-port device +/- euro
80) and an ethernet card for the PC (+/- euro 40).
Using STinG you can set up your F030 as gateway and STinG also has
drivers for the ethernet adaptor.
More info :

4100. Modem init

Newsgroup: comp.sys.atari.st
Date: 1999-09-05 00:00:00 UTC
From: broncos@primenet.com
Message-ID: <7qtrbv$7m9$1@nnrp02.primenet.com>
Source record: 73781

Can anyone tell me how to manually set my modem to answer the phone.
I knot its a small like 4 digit command with a number following which
tells how many times to let it ring before answering.
If anyone can tell me I sure would appreciate it.
I know to make it dial is atdt and then the phone number.
again im looking to get my modem to answer the phone.

Gene

>the boot partition at all.

Hi Uwe! Thanks!

>That is *under* 1 GByte.

I take it that's a *real* Gigabyte, not 1000 MB. So I can have
partitions of up to 1,073,741,799 bytes?

>LFN? What's that? Long filenames? TOS will only see the short filenames.

Yes, long file names. I was wonering what was the disadvantage (if any)
of having all partitions with these. In particular, I want to be able
to use the drive under TOS 4.04 if necessary (for any programs that
don't work with LFNs).

Regards, /Peter/

4102. FS: Mega STE + more for sale

I've played Sundog using Winston for hours with no problems at all, in
fact I'm almost finished. How do you have it set? I'm using TOS
1.00 (I've used 1.62 too), screen res at 16 colors- hi rez, memory
1024K, emulation set at ST speed. It runs perfectly under this setup
(for me anyway).

>again im looking to get my modem to answer the phone.

Hi,

you need a setting in the S-registers:

ATS0=000 sets to no autoanswer,
ATS0=001 (or 002) sets to answer after the first/second ring.

If you want that to be a default setting, save it to the active profile by
entering AT&W0 or AT&W1 (depending on what profile is used at startup).
Default for a modem is AT&Y or AT&Y0 which means profile 0 is used at
startup.

HTH,

->B.P.

Hi. They did make DM for the PC, and it was odd. IIRC, they used some kind of custom sound setup that plugged into your serial or printer port. Some kind of sound chip. My brother d/l'ed a demo of it for his PC, and TBH, neither of us thought it had the same look and feel as the original ST version.

I'm not sure about Chaos Strikes Back for the PC. Haven't seen it.

DungeonMaster II was released for the PC, Amiga, and Mac. I think it did use 256 colors/sound card support etc,... Note that every review I read of it canned it. ;-(

Sure wish we could have seen a 256 color DM2 port for the Falcon. That would have been way cool... ;-)

Message-ID: <7qvceq$fku1@news.ajou.ac.kr>
Source record: 73697

Sorry if this is a repeat post, but not sure the original one
went out.

Apex Media users,

I've been looking for some good clear Fonts and have not been able
to locate any that I can use.

What I need is some Fonts that I can scale down in size to around
8, 9 and 10 in point size. Any that are similar to the Atari system
Font would be good. I could also make use of any Fonts that will
scale down and still be clear and readable below 8 in point size.

I also need some good Fonts that range from 12 to 36 in point size.

I have downloaded alot of Fonts from the Net, but most of them
appear the same and look bad and I have not been able to scale them
down to a small size that is still readable.

If you happen to know where I can download some good Fonts for use
with Apex Media, then pass along the info if you can.

Also, I was looking thru a small Buying Guide that came with ST Format
Issue 51. On page 16 there are 3 programs mentioned from Titan
Designs, IMPRO ANIMATE, IMPRO DESIGN, and IMPRO CAPTURE.
Not sure if these were ever made and released for sell. Anyone know
if these actually were ever produced and sold?

And, does anyone out there in the Atari World have a working or non-
working EXPOSE and or a SCREEN EYE for sale/trade?
If so, e-mail me your asking price.

Any help with this is much appreciated.

The final version worked fine regarding network and X11. It didn't
simply feature X11R5 but also Motif 1.1. I used this version for several
years and it worked fine. Today Linux is a better choice, of course.

Hello all I found an Atari Sc1224 the other day and am looking for info on the pinouts on the connector. Anyone have or know where I can get the info..

Thanx..

Hack Away Junk to reply....

4127. What is the PARX System?

Newsgroup: comp.sys.atari.st
Date: 1999-09-06 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7r06en$fsj2@news.ajou.ac.kr>
Source record: 73710

I have seen a program called the PARX SYSTEM for download as a
Demo or Shareware software program.
But I have never fully understood exactly what this is for.
It looks interesting with all the Modules and etc.
Is it shareware, Commercial, or Freeware?

Can someone who is fimilar with this software explain what it
is for and what it can do?
Also, what Atari systems does it work on and where can one
download the latest version at?
Future Thanks,

 phantomm@kih.net

4128. FS: STE and MegaFile 30

Newsgroup: comp.sys.atari.st

I have for sale a very nice 1040 STE with 4megs TOS 1.62
that has a composite video output modification.
Also comes with a Atari MegaFile 30 hard drive.
And various software and hardware.
Priced reduced to $200 USD.
Misc. software added to package.
Buyer pays shipping charges, Overseas Buyer is welcome.
If serious about purchasing, e-mail me for complete list of
what comes with the system.

>
> Can someone who is fimilar with this software explain what it
> is for and what it can do?

The Parx system is a set of drivers made for reading/writing images.
Applications using the Parx system can load a wide variety of file
formats and it doesn't make a great difference for the software if the
image is a TIFF or XIMG. There were even drivers for digital cameras.
The system comes from France so most applications using it come from
there, too.
You can't do anything with the Parx system alone - you need
applications supporting it.

have a look at:
http://www.epita.fr:8000/~da-cun_e/DOWNGB.HTM

The Parx system itself is freeware.

> Also, what Atari systems does it work on and where can one
> download the latest version at?
The modules should work on any TOS computer. I don't know where you can
obtain the latest version - Parx doesn't exist anymore.

Greetings,
Matt.

4131. NEC Multisync 2A monitor for Falcon

Newsgroup: comp.sys.atari.st
Date: 1999-09-06 00:00:00 UTC
From: Bob King <robert.king@patent.gov.uk>
Message-ID: <37D3BF9D.6DB40504@patent.gov.uk>
Source record: 73714

HI,

I have just got, free, an NEC Multisync 2A. The 15 pin plug plugged straight into a PC and displayed Windows etc, with ease, albeit initially letterbox aspect ratio.

I clipped of the plug, noting the colours and pin outs and loose wired to a spare Falcon 19 pin video plug - booted up and nought, just a very rough raster with wavey edges. I did not have the M1 M0 detector pins pulled, as I use the plug for my RGB monitor, but surely I should have got a raster, even rolling. The previous owner used it on his ST.

Any help would be very useful.

Bob King.

Bayle himself seems to have gone, at least for now, but you can still
get the parx sys files at:

ftp://193.190.204.128/atari/utilities/parx sys.zip

and the various demos using it at:

ftp://193.190.204.128/atari/graph-tools/

You will find that the first thing one of the parx sys using progs needs
is the path to the parx sys files.

Bob King.

4133. FS: Atari TTs, to the technically minded

Newsgroup: comp.sys.atari.st
Date: 1999-09-06 00:00:00 UTC
From: Dan Mazurowski <smedley@gte.net>
Message-ID: <37D3D87B.38161BB0@gte.net>
Source record: 73716
Cross-posted to: rec.games.video.atari,comp.sys.atari.st

I have two Atari TT computers, and one PTC-1426 color monitor, which I have decided to sell. Both computers have 4 megs TT RAM and internal hard drives. (Well, last time I fired up one of them, the RAM test only went through 2 megs, something is wrong there.)

These machines do need some technical assistance. Both TTs came from Data Stitch. They modified these machines in a couple ways. One was to boost the printer port to transmit something like 100 yards. I think this mod may have affected the speed of the serial ports, but I have no idea how. I just know that in Flash II, the higher speeds which should have been available on a TT were not. The other was to modify the floppy controller as a form of copy protection, this mod interfered with floppy operations. I tried to remove the floppy mod (appeared to be just a wire soldered to one leg of the chip) but I was not successful - I suspect there may be cut traces on the motherboard as well.

I used to work around the floppy problems by networking these machines with an Atari 1040 STe and using it's floppy drive. Both machines have a copy of MIDI-Net installed.

I have recently heard of TTs selling in the $250 range. I was quoted $100 by a local tech it would cost $100 to de-mod each machine (he has done several of these for members of AUNT). So considering these numbers, I would be willing to sell these for $100 each, plus shipping. This is negotiable, especially if you have some cool game stuff to trade. I'm also looking for B&W photo developing gear (I'm selling these to raise money for a darkroom for my wife).

Oh, I almost forgot the monitor. It has a problem too. It seems the blue gun doesn't get a signal. sometimes it will kick on and all the colors look good, but most of the time it is off and everything looks wrong. A friend of mine who knows what he's doing thinks it will be an easy fix, but he hasn't opend it yet so he doesn't actually know what is wrong. I'd like to get $40 for this, or if you're also buying a TT then I'll charge only $25. Plus shipping, of course! As above, this price is negotiable.

Since I'm willing to accept partial trade offers, I'll be looking at offers over the next few days. I'll let all prospective buyers know my final decision on the 9th (Thursday).

Dan

The space between parx and sys.zip, although part of the file name,
causes the link to end at parx. Look in:

ftp://193.190.204.128/atari/utilities/

for file parx sys.zip

Sorry for the glitch

Bob King.

you may want to try over at www.doomworld.com, this is where news of new WADS and where to download them are.

And now a question - will the new Batman Doom WAD work with this? It sounds like it may require a Milan or Hades, or at least an accelerated Falcon to try this one...

Hi all,

Nope, 6ms on its own WON'T do the job the ST won't boot with that alone, if you set the step to 6ms also (assuming 16mhz) it will boot but the ST has real problems reading the disc at 6ms. Either 6ms just does not work , OR, the ST is altering something else other than just the seek rate ???????

Hi Bob,

I wouldn't mind trying 3.20c myself if you don't mind sending it over
here too. My 3.20b worked fine until it bombed out one day, and ever
since, it only bombs out when I click on it.

As for Don's remark below about the French language, I keep an older
copy of the English version for comparison. Most of the menu options are
still the same for comparison.

Thanks,

John

DOITF030 contains all kind of falcon video connection methodes, the 19 pin connector pinout and the "how to repair" for anybody how forgot to connect display mode pin M0 and M1 in the right way. No any display synconise video signal with 15.5KHz referesh (falcon r,g,b / TV) or 71Hz for monochrome. DOITF030 also contain a table of allowed video modes, switchabel by M0 and M1.

Colorised schematics for video adaptors.

You can do this in two parts: "Parafin", or the more detailed "SuJi" will locate text strings in files on one or more logical drives and allow you to specify a directory (Parafin via the fileselector, SuJi in a command line or a dialog). There is also Holger Weets' "Finder" (PRG or ACC) but there you can only specify drive letter(s), not a directory to search.

All these list the file(s) contaning the string. With multitasking you can drag the entry from Parafin and SuJi output lists to a viewer. With single-TOS you will need something like "Master Browse", "Look'n See" or a text editor to display the files. Use "Find" to locate the string.

Regards, /Peter/

AHCX can do this.
It displays the occurrences in its journal, if you then right click the word 'Found'
the file is opened and the line which contains the occurrence is selected.

Hi Daniel and Mark!

As far as I'm aware only a few WADs work, basically (for Doom at least)
the original id Software WADs such as the shareware and registered
versions. I think there's a list of them in the documentation.

I got hold of the shareware WAD for Doom on the official id Software site,
it's an FTP archive of them.

The address is: http://www.idsoftware.com/

Cheers!

James

For Sale: Calamus Public Domain/Shareware Font Collection

Over the years, I've collected a large library of PD/Shareware Fonts for my Calamus Desktop Publishing software. In all, I have over 150 fonts in the collection, contained on 7 diskettes. Also included on an 8th diskette is the excellent Cherry FontViewer program which enables you to view and print a page of ALL the characters in any font set. If anyone would like the set of 8 diskettes, they're yours for only $10 to cover the cost of the diskettes, packaging and shipping via Priority Mail (within the continental USA only). If interested, please respond in Email to: s.winick@worldnet.att.net

Sheldon

4150. Nvdi 5.03? Problems!

Newsgroup: comp.sys.atari.st
Date: 1999-09-06 00:00:00 UTC
From: fried@dragon.achilles.net
Message-ID: <7r164b$9sp$1@hermes.achilles.net>
Source record: 73733

Has any one installed Nvdi 5.03 the "fresh up" to NVDI 5.01?
I did and it seems buggy, the printer configurator CPX does not seem to work
nor does the IMG displayer.
It might have something to do with the settings for the various drivers,
I have a Nova video card.
In any case I must re-install Nvdi 5.01 because I can't change the
printer settings.
If you are "freshing up" make a back up first I think!
Mark

>necessary (for any programs that don't work with LFNs).

You shouldn't have any problems in most cases (and in any case you can turn LFN's off on a temporary or permanent basis on a drive-by-drive basis).

Programs that only understand the standard 8+3 filenames will offer you a filename that is based on the LFN, this filename is saved to the drive directory at the time of saving the
file in the first place (I've put that badly but ITYKWIM).

You'll probably find that it's an advantage to have a LFN partition for your CAB offline cache.

>Falcon to use the Black and White Scanners?

If you're trying to use a cartridge port based scanner on your Falcon without success, it might pay you to experiment with the cache setting (I can't recall how you get to this now, probably via an NVRAM setting utility or CPX). Since you have a Centurbo it might be worth experimenting with the Fgeneral.CPX that Centek supply.

Oh, and I forgot to mention that Atari users who would like to make their
own PWADs can use GEM-DEU to edit levels, and FWT is available for general
wad maintenance/viewing.

GEM-DEU can be found here: http://www.btinternet.com/~AnthonyJ/gem-deu.html
FWT can be found here: http://www.users.zetnet.co.uk/dmurphy/

The Bad Mood homepage at http://rand.thn.htu.se/ is also worth a visit for
those who havent seen what BM was like.

From: Justin Scott <jmscott42zzz@earthlink.net>
Message-ID: <37D519FA.1319DE8F@earthlink.net>
Source record: 73550

Hi,

I'm wondering what the best way to transfer my Atari ST's hard drive's completely over from the ST to my PC? (keeping all files and directories and such intact) The only thing I can think of "easily" to do is hook up a null modem cable and hand-transfer all the files (i.e., create directory X on the PC, transfer the files, create directory Y, transfer the files)

Is there an easier way to do this? I'd love to be able to back up all the data this way, as I really don't have any backup setup on the ST... I know there was a program a few years ago I tried that was supposed to let the PC see the ST as a new drive letter, but I never could get that to work...

Thanks for any help!

(remove the zzz in my email address to send me email!)

4159. Good ol' Atari!

Newsgroup: comp.sys.atari.st

From: louis@holleman.demon.nl
Message-ID: <37d50e90fa2ccc50@holleman.demon.nl>
Source record: 73551

Yup! Still got it (3 actually) and still love it (them).

So now I've got this super-duper-PC machine sitting here for about a forthnight and I'm asking myself: Is it fun? I'm answering myself: yes and no. Next Q: was the Atari fun? A: yes and sometimes no.

You see, I got this 1040 STf way back, and learned about computers and software with it. I know I had several questions, but then again: who doesn't?

Later came the TT with all sorts of problems related to s/w, and tks to a lot of helpful people I always managed to get it done, sort of...

So the Atari grew with MagiC (still love it) and I experimented with Mint incl. the whole Minix bunch and for a short time with Debian Linux.

People asking me: you're Internetting with that thing? Yessir, and hardly any problems at all. Setting up Sting was the worst part. It ran after one day (remember the sick route.tab and cache.dns files from the beginning?).

I used Newsie, FireNews, aMail, MyMail, Okami all without major problems.

The probs with my Atari's are: they're bloody slow. Got a nice jpg, wanna look at it and it takes 40 secs to 1 minute to display in TC (and yes, going back to a lower rez takes even more).

The Net: no probs. It's just that the surfing is slow with CAB.

I also wanted to try out Linux complete. Not really much fun on an Atari.

So now I've got an Intelbox, with a MS OS on it. Wowie-zowie!

With an Atari, you don't have a complete OS: I have MagiC, I know where the files are and what they are for. The whole Internet stuff: install separate packages and you know where they sit and what they do. Same with the TCP-stack. All the other plug ins: Gemjing and all the s/w packages, I know where they are, what they are for, how to change configs. I love the Thing desktop, use it for years now and I'm anxiously waiting for the next upgrade.

Back to the PC: mine came with Win-98 (no choice). It's said to be complete. Yup, got the IE and Outlook too. All wizard s/w, wizard-installers, wizard-uninstallers, etc. etc. etc. B. Gates knows all about it, go ask him!

Day-1: got the box, did the final W-98 installation-finish and I was up and running. Had to install some extra stuff from the dozen CD's I got with it and that was about it.

Day-2: Internet won't run any longer... No matter what I change, rechange, set up again: no connection.
Day-3: Back to square-1: wipe out the C-drive and do a recovery install from the back up I have on my D-drive. Internet works again. I strongly suspected one piece of shitty s/w to be the culprit, so I re-installed most of the CD s/w and the suspect one was to become a shooting-target. Internet-kit still OK.
Day-4: change the bloody MS s/w for email to Pegasus Mail. At least it's pretty self-explaining, no stupid gimmicks and it works. Only thing is it somehow now refuses to add my sig to a msg. Gotta check that one out.
Day-5: the way Outlook handles news is miserable: no decent offline working (yes it does handle it but not very userfriendly). Replying to msgs is a pain-in-the-neck, since you start writing at the top, below is your sig inserted and at the bottom follows the quoted text. Probably "Gates-thinking"... How the hell can you decently "maintain" your news groups with it??
People suggest Turnpike for news. OK, I fetched the basic file (7.5 megs) and installed. It's supposed to work with Demon accounts. Well, not with mine, since I keep getting messages like "you need to BUY a site-key for other accounts than Demon" and next the connection is terminated. Strange, I seem to remember I work with Demon over here. (BTW, if anyone knows of another decent news handler, offline that is, my ears are all open...)

Tried to remove Turnpike to give it another try with a fresh installation. Next the Gates-wizard tells me it cannot delete some files and dirs from the package. So I do that myself and install again.
Somehow the stupid Turnpike stuff changes my default external dial-up connection making it think I'm dialing from the UK. No I'm not, I'm dialing from Holland and after Turnpike's start I have to change that first before I can dial in. Next start: same shit.

I told you all before, I wanted to give Linux a try. So I bought the latest SuSE dist, I had to rearrange my hd to shrink the C-partition and create two new ones for Linux. Did just that without any trouble, installed the Linux bunch and finally wrote Lilo to my MBR (another tricky operation but it went perfectly).
The problem now is that the Xwindow stuff won't run at all here. All I can do is work in the textscreen. So much for the SuSE distribution...

To cut a long story short: I'm sitting now in front of my stupid old TT, typing this stuff and at least I can say: it works, does what I want it to do and that's it.

The PC: well, it's probably a long road to a nice working Internet stuff, and maybe another long road to get Linux working with Xwindow and the KDE desktop.
Thank God there is at least one piece of s/w that works flawless on that machine and I don't have the feeling I bought it for nothing. But the last few days it literally gave me headaches and that's NOT what it was bought for.

Well, you can copy a directory.

> Is there an easier way to do this? I'd love to be able to back up all

> to work...

That's Ghostlink, and it's actually the other way round (The ST adds the
PC as a new drive letter). This needs a null modem cable, and the PC
part should run under real DOS, not in a DOS window. The problem with
serial is it's SLOW!

You can try PARCP or Paralink. These use a special parallel cable that
you have to build because it is not available off the shelf anywhere.
Parcp can run in either 'text FTP mode' or a 'Norton commander type
mode' which is crippled in the unregistered. Paralink I've never been
able to get running.

Both should be available from the Quick FAQ:
http://bales.online.fr/atari

Yes I have. I use it a lot when compiling PD-disks and it goes ok but
on some days (no correlation found with phase of the moon) all
packing goes wrong. I find that out the next day always when i test
the PD-disks for integrety: unpacking them and check programs for
functionality.

Never found out why things went wrong for a few hours.
Once I thought I found it: nameless folders. But NO.

If you have the ICD utilities, you can hook up a SCSI drive to the ST
and copy the files to that drive. You can then unplug it and hook it
up to the PC and it will be able to read it. I copied a bunch of
syquest 44 meg cartridges to a hard disk and moved them to the PC that
way. I then made a backup on CD. The only problem is that you cannot
create very large partitions, otherwise the ST will not understand it.

If you do not have SCSI in your PC, you can try to use the STTRANS
program. It is intended to copy things from one ST to another, with
either a parralel cable or a serial null modem cable. But there is
also a program called PCTRANS that will communicate with the STTRANS
program. Of course, PCTRANS is the PC version of it, and it only
works with the serial port. It can copy directories though. At 19200
it is not very fast, but if you are not in a hurry, it works sort of
unattended. You could first ZIP all the files to reduce the time it
takes to transfer it all.

I use PCTRANS all the time to copy stuff from my STbook to the PC.
Keep those ST's humming.
Ernest.

I found FSEARCH (version 7.4) very useful and reliable.

It can search for files, and/or strings in files. It has a number of options
for file-selection criteria (by size, date, type, etc.); it displays filenames
and lines containing the wanted string, and stores the results in a file.
It can be a .PRG or an .ACC, etc. etc.

It can be found on ftp.cs.tu-berlin.de ... pub/atari/Utils/Disk/fsearch74.lzh

4170. WTB: ICD SCSI host adapter

Newsgroup: comp.sys.atari.st
Date: 1999-09-07 00:00:00 UTC
From: themrfreeze@my-deja.com
Message-ID: <7r45vjalq1@nnrp1.deja.com>
Source record: 73562

Hey all.

I'm getting back into Atari STs after being away for 7 years, and I want to put together a hard drive system for it.

Would anybody know where I can score an ICD host adapter (preferably one of the internal models like the AdSCSI ST or AdSCSI Plus ST)? I know that ICD still sells 'em, but I'd like to avoid paying as much for a hard drive interface as I did for the entire 1040ST/monitor setup. :^)

Much obliged!

Chris

I used the Mac's Doom wad files and performance is quite good
considering I'm on an unaccelerated Falcon. I need to shrink the screen
like, but I'm happy with what I'm getting out of this old 16mhz bird :)
Nice one Patrice!

There's a shareware program for this transfer

ghostlin.lzh ;GhostLink 1.02b, a Network between a PC and a
ST

look for it in the archives.

If you specify a search string in Finder but not a drive(s) to search in, the fileselector that appears allows you to specify a directory in which to search.

Sorry, but I haven't got any Calamus fonts currently. I do know that
none of the hundreds I used to have would show clearly at small sizes.
I would spend ages using the dejag and also interpolative box to alias
them. Sometimes it took ages!

Kind regards,

>
> You can use the supplied CD COPY.PRG to do this. CD COPY can also
extract
> data tracks not only audio.

I actually haven't needed the function, but thanks for the tip :)
However, the CD copy program can only handle Atari formats if I've
understood correctly, and I was mainly thinking of mixed mode sampler
CD's, with both audio and data tracks and the data tracks aren't
readable by the Falcon...

> >CDRecorder is the only burner program that does everything a burning
> >program is supposed to do. It's more expensive - but you'll get great
> >functionality for the extra money :)
>
> I've been shouting this here for months!! finally there's someone here
who
> agrees :-))

CDRecorder is worth every penny it costs since it's complete and the
audio part is actually better than most PC programs... It's nothing but
great - and it has a complete functionality, without any low-budget aims
which forces the programmers to make a less capable program...
Besides - it's one of the few professional Atari programs that are still
supported and developed. Hooray for SoundPool!!!

>
> where o is a pin and x is blank.
>
> Can someone please tell me what these pins are, and how to connect
> to the Atari pins/signals?

I just recently went through this problem with connecting a SVGA monitor to a Atari 1040STF so I can use the monochrome high rez mode. Visit the following web page for information on making a cable:

http://columbia.digiweb.com/kiffer/ATW/ST-VGA.html

You'll have to be careful on the type of monitor you choose. Like, I first tried a Gateway 2000 Crystal Scan 1024NI monitor. This monitor only does 640x480 mode and would not sync to the ST's video. But my CTX 5468 monitor works. The screen is off center, but viewable.

Hope this helps,
Glenn Bruner

Come again?

If you mean that 6ms steprate alone won't give you access to the 1.44Mb HD
floppies, you're right. You need to feed the FDC with 16MHz and you need a
HD capable diskdrive. And HD diskettes.

Source record: 73744

> As far as I'm aware only a few WADs work, basically (for Doom at least)
> the original id Software WADs such as the shareware and registered
> versions. I think there's a list of them in the documentation.

Doom et al were designed to be extended. There are two types of WAD - IWAD and PWAD. IWADs are the "ID" wads which are the ones you mention, while PWADS (patch wads) are "addons" which include new levels and maybe a few other extra new things... To play, you must have an IWAD, and may have multiple PWADs (these are specified on the commandline with -file IIRC).

doom.wad doom2.wad plutonia.wad heretic.wad and all the rest (there are actually quite a few of these) are IWADs. I dont see why these shouldnt work, as the doom sourcecode does include support for Final Doom, Ultimate Doom, etc.The Heretic and Hexen ones need the heretic modified binaries of course, but thats not a problem as they are released as well. Doom detects which wad its using (cannot remember the search order) so unless PM has modified this functionality, you'll have to move the wads in and out of the doom directory to play the different games.

There are lots of PWADs out there - I'm sure there are still lots on ftp.cdrom.com and I'm sure they will work with the Atari ports as long as nothing has been broken... oh... and in some releases of Doom you needed a "registered" IWAD for the -file command line to work, not sure whether that check is in the pmdoom version.Even if the check has been removed, they may require textures from the registered wads, so its best to get those if you can.

The "new" wads mentioned earlier in the thread may only work with modified versions of Doom like Zdoom (PC people are adding lots of things to it which will not work on our "old" ports).

Hello Justin,

j> I'm wondering what the best way to transfer my Atari ST's hard drive's
j> completely over from the ST to my PC? (keeping all files and
directories
Maybe it is much more easy, maybe not: You have SCSI drives at your Atari
(at
least internally - not the old "shoe box" with 30(?) MB)? If you don't
know,
ask the "newsgroup experts" (maybe at comp.sys.atari.st.tech) whether your

hard discs are SCSI or not.

If so they are SCSI:
1. Get a SCSI adaptor for your PC (always nice to have ;-)) and plug your
ST
drives to it, or, if the drive boxes have only external ASCI connectors,
open
the boxes and put the drives themselves into your PC.
2. Download/buy GEM-Exchange at http:/www.emulators.com and just copy the

files. Afterwards, you can partition the hard drives for usage with your
PC
(if you want to). And if you download Gemulator too, you can even use your

Atari programs and data within your PC ...

4196. ST Floppy Seek rate

Newsgroup: comp.sys.atari.st
Date: 1999-09-08 00:00:00 UTC
From: Chris Swinson <chris-swinson@mega-disczine.freeserve.co.uk>
Message-ID: <7r683c$oi9$1@news7.svr.pol.co.uk>
Source record: 73579

It has been apparent that simply altering the floppy seek rate will allow the adaption to HD Discs using 16mhz Clock. I've tried hardwireing 6ms into the floppy controller and my findings are that this does not work. The floppy won't boot with seek rate at 6ms, if you wire 6ms also into the step rate the floppy will work, though the ST will have really bit problems reading from the disc.

Firstly can someone point me in the direction of a possible boot program where I can boot to 6ms ? According to all the info on the net this should allow the workings of 1.44 discs when running at 6ms, this I would like to see. This will prove if the ST is programming something else other than the Seek rate. As it stands 6ms for seek rate does not work, though others say setting 6ms will work fine for both 720 and 1.44 discs...

>TT that had only limited release...
>

Besides those already mentioned there was Minix version 1.5 for the 68000 based ST's from Prentice Hall (based on the book "Operating Systems: Design and Implementation" by Andrew Tanenbaum). I think there were some people who got it running on the Falcon/TT, but Linux and the *BSD's for the 680x0 (x > 1 with MMU) came out around that time, so I'm not sure how much work was put into getting Minix on the Falcon/TT stable and distributing the patches. I ran Minix on a Mega ST4 for several years with no problems. The virtual memory system was a little screwy (shadow memory due to a limitation of the 68000), but not as limited as the 8086 version of Minix.

There was also the ATW (Atari Transputer Workstation). This was sort of a Mega ST (used for I/O) interfaced to a transputer system running System V. Atari originally claimed that it would be an upgrade for the Mega ST (so I bought a Mega ST4), and later said that changes to the motherboard menat that the system had to be sold as a unit. Like the TT-Unix system (which replaced it), the ATW saw very limited distribution.

I've a falcon on the work bench..
My atari 14meg board apparently isn't fast enough.
Any idea where I can obtain a board that would work?

Centek does not have any in stock, and they don't know if/when another
production run of their own will be made.

Am I out a wad of cash?

If you can help me, please do...

Thanks,
Brian

Try this link:
http://www.wbsystemtechnik.de/atari/
They manufacture a memory card with place for one 72-pin SIMM, which
works very well.

If you really want to get down to business it's possible to use a PC's
PSU. Or get a replacement Atari one.

Where about's in the world are you as I may have a spare one around
somewhere.

From: phantomm@kih.net
Message-ID: <7r6sbe$ivq3@news.ajou.ac.kr>
Source record: 73594

I'm interested in buying a Wand Scanner with Sheet Feeder
that is compatible with TouchUp and a ST/MegaST/STE.
Must be in very good working condition and capable of scanning
a full page in one scan.
I think MiGraph made some MonoChrome Wand Scanners and one
of those would be what I'm looking for.
Any others will be considered also.
Not sure if a Color Wand Scanner was ever produced for the
ST line. If so, I'd be interested in one of those.

Also want to buy or trade for a Hand Scanner Scanning Tray.

I think MiGraph may have also sold some COLOR FlatBed Scanners
with Software for the TT/Falcon.
If you happen to have one of those for sale/trade then do let
me know.

If interested in trading, I do have some Atari software/hardware.
You can e-mail me your asking price with info on the Scanner/Tray
to me at,
phantomm@kih.net

>Kind regards,

Hi Chris,

I was wondering if anyone else had that problem as well.
I think Apex is excellent, but the Font System needs some improvement.
Thats the only fault I have with the software.
I'd sure enjoy the ability to load VideoMaster Falcon video files
directly into Apex. That would be a nice update.

One work around would be to use another Graphics/Paint program with
a good Font system like TruePaint to do the Text stuff and save it out
in a Apex compatible graphics format, then load/paste it into Apex.
That's probably what I'll end up doing. I like to use nice Fonts
in my Video/Graphics stuff.
I'll keep looking for a Font set that will display small sizes.

Rich Davieys has written down basically what's up with the server.

http://www.atari.org/news/index.php3?id=article&number=220

It seems they have had problems with aging hardware and power surges.
The server died and all the disks blew up, so they had to reinstall
everything by hand on backup hardware. They are still in need of a new
server, but don't have the finances to get one.

No no no!!!!

To read 1.44 Mb floppies, you need:
- To feed a 16MHz signal into the WD1772 instead of 8MHz. To do this,
you need to add either a 16MHz oscillator, or to get 16MHz from the
Shifter, and some sort of switch to be able to select the mode.
- To set the TOS step rate to 6ms instead of 3ms. This can be done by
software.

Just changing the step rate on it's own will not work.

Hi Ron,

well, Aniplayer ain't faster than Graftool over here. Remember, I've got
no DSP in this TT :-) But displaying the same pics on my Intelbox is hit
CTL-O, select, and zip, it's on the screen :-)

For the rest, well, you got the picture! I won't dump my Atari's...

Jim,

I have several used external power supplies still lying around. You can have one for $5 plus shipping if interested. I may also have a new one left in the parts cabinet if you're interested -- will have to check availability and price if you'd prefer that.

Any offers for this? Full package including manuals. Quite bulky, so
would also need to add a couple of #s for postage.

4226. Strange File on Hard Drive

Newsgroup: comp.sys.atari.st
Date: 1999-09-09 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7r8b0h$k2k1@news.ajou.ac.kr>
Source record: 73609

Recently downloaded what supposed to be a text file from a small
Atari ran FTP site.

Now I cannot delete, rename or even view the file.
I also have a few folders and files like this one on a 540meg
SCSI drive but not concerned about those as I'm getting ready to
re-partition it and hooked it up on a MegaSTE. But I would like
to get rid of this latest one.

The file happens to be on a 800+ partition on a IDE drive.
I don't have a version of Diamond Edge that will work on these
large partitions, been using ZORG which works fine.

BTW, I think the file I downloaded had a long filename scheme.
Anyone know a utility or way to get rid of this file?
I'm using HD Driver or Cecile.

Also, what causes this to happen?

And, anyone have the lastest version of Diamond Edge for sale?

Thanks for the Anthony ,

only trouble is it doesn't work fully with MagiC (5.11) ,
only the system startup.. and the 68000 exception calls play the
samples.

Is there a such a program which works with the MagiC calls?

thanks

Hi,

You could try GBELL, shareware (http://www.scriba.org/labs/bin/)
or Rational Sounds, commercial (http://www.talknet.de/~hornsk/)

Hope that helps!

Best regards,

Joakim

I always thought it would just need Seek rate to be 6ms not step rate,
though I tried altering step and seek to 6ms and that worked a lot better,
perhaps I should just alter the step rate to 6ms and leave seek rate at 3ms,
are you saying this will work ??

I used to have that (long time ago, for some reasons i won't explain), but
anyway, the only solution I know of that worked, was to load kobold. And
erase the file from there.
Good luck.

Hi Phantomm,

First, check to see that the file is not "read only" (instead of "read/write"). That would prevent erasing or renaming. I think the file name would have a triangle infront of it if it is read only. Next try some sort of hard drive editor to find out if there is a blank contained within the file name - that can cause problems. Change the blank to any other normal character.

Good luck,

Hi all,
I was useing a Supra 56k (Express) untill a lightning ZAP! I'm now useing an older SupraFax 28.8 (flashed up to 33.6). I don't see much difference in download speed (as reported by CAB 2.7). My max is around 6k (27k if the file is under about 1k). The older modem is configurable via a terminal program and the newer is'nt.
I guess my question is: how to get a faster download speed with the 56k (before I go get another one)?

Hi Ron once more,

just a little side note: I've got this SETI program running on my Intelbox.
On average it crunches a block in 10-12 hrs, if I won't let it display the graphics.
If I do that, it goes up to around 20 hrs. Now there is no port for the program to run on Atari, but I wonder what my TT would take IF it were available.
TT's CPU cycles at 32 MHz, this Intelbox cycles at over 14 times that fast. I know you can't exactly say: therefore it is more than 14 times that fast, but it wouldn't surprise me if the TT would need more than 100 hrs for the same stuff. This is pure data processing, nothing else. On this Intelbox I can use the Net in the meantime, run Word or something else without it affecting the processing time much. If I run ProPilot-99 on it, the time about doubles.
I wonder what would happen if I ran that SETI on my TT, while meantime doing surfing, textprocessing or displaying graphics just to view another Jpeg.
OTOH: I've seen reports from people who need 106 hrs on their machine to crunch a block. They're probably running 8088 processors :-)

if you format the drive on the Apple with PC Exchange as a DOS drive,
and use HD Driver as the boot driver on the Atari it should work.

MagiCMac certainly does work on the Duo: I've seen Joe Connor laying
out Atari Computing on his DuoDock system running MagiCMac and Papyrus.

I just purchased an Epson PhotoStylus for both my Falcon and my Quadra,
and I must say I am VERY impressed with the results I'm getting from it.
You'll have to get NVDI 5 to make full use of an Epson, but it'll be worth
it.

Note - I'd suggest getting ahold of something like the 740 or 740i if
you have more than one system at home, as it uses parallel, Apple serial
and USB. (this will be important if you own an iMac or want to get the
USB-equipped Centek or Milan 500).

You might also want to check out http://www.epson.com, as the company
makes refurbs available from time to time at good prices. If you only want
to use it with the Falcon, you could go for a 440 or 640 for excellent
results.

Thank you! 8-)
Actually we're still working on Willie's Adventures. It feels like we've been working on this game for ages, and indeed we have. It was 3 and a half years since the first preview was released. Things went really smooth in the beginning as me and Thomas had plenty of time working on game. Nowadays, we're both attending to universities and well... you know what happens to spare time then.
But as I said, we're still working on the game along with some other projects, a demo called Dream Or Reality, FlexTrax (a soundtracker), etc.

Even though this probably sounds like bad news, the game has progressed VERY much since the second preview released in the first quarter of 1997. The game engine and programming is about 100% ready really. What's missing is graphics and some music, and an intro part, end part, etc.

Read more about Willie's Adventures and our other projects at our homepage!

Papyrus 7 might. It can certainly read Script *.STX files via a
separate program and I think it can save in html mode. I only have
the demo version of Papyrus 7 and this probably does not come with
the converter program.

Hi Louis. Don't worry, it's not just you. Over the weekend there were a combination of things that caused the problems you've detailed. It hit all of us.

First of all, they had a server go down and the routine that was supposed to boot it up again simply didn't work. Second, they had a hard drive go bad. Third, there was a campus-wide network problem.

According to the folks at SETI@home, those problems have now been resolved. The reason you've gotten incomplete work units is that they are still dealing with the backlog.

I agree that it is an inconvenience and, in the case of users in the UK, more costly than need be. I hope that you decide to stay on and remain a member of Team Atari. I'm hoping that as time goes on these glitches will get smoothed out and disappear.

Hang in there,

Joe Mirando

> but it wouldn't surprise me if the TT would need more than 100 hrs for the
> same stuff. This is pure data processing, nothing else. On this Intelbox I

Well, considering it takes average 20 hours on your FAST Brand new PC. for
a 300kb block. You are allowed to laugh at the TT performances.
But what? then all SUN owner can laugh at your brand new machine, Not even
remotely thinking would spend 20 hours processing a packet when they can
do the same in 2 hours time. Yes. 2 versus 20. They laugh at you, then you
laugh at the TT, then the TT laugh at the amstrad 464, then what?

point 2: Actually as odd as it may seem, a standard 16Mhz falcon for SETI
would be faster than a 32Mhz TT. (not confirmed, but from my
understanding).
The processor if optimized DSP would be WAY faster because all it is is
FFT, which the DSP, basically was designed for.

Could be wrong. and wouldn't suprise me if I was. But well.

>that would work?

You don't mention whether you want a FastRAM or STRAM board. I bought a 32Mb SIMM from a computer fair which works great as FastRAM, and one of System Solutions' last remaining CentRAM boards for STRAM, fitted with a Panasonic SIMM that I already have.

I had a problem with the previously existing ActionSoft board with some flockering pixels in the higher colour modes.

I'd suggest going to Nima Montaser's web site http://www.magma.ca/~nima and taking a look at the scanner driver he sells - one of these with a SCSI flatbed scanner (see the docs for supported ones) is a far better bet in the long term IMHO.

You can scan directly into programs that support GDPS drivers, such as Alexander Klauss' OCR software, PixArt and the latest version of Calamus SL has a GDPS module.

Hi,

just wondering what the other participants on SETI/Team Atari are experiencing:

When I started, the first 2 or 3 days I could connect after completing a block, send the data and get a new block pretty fast.
After that, I experienced more and more troubles to hook up to these SETI servers. Very often the program quits on a time-out, sometimes it starts fetching data, then after somany kB's it times-out too, leaving me with an incomplete block so I need another connection to get the block completely again.
The other day I haven't been able to connect for around 36 hrs, getting messages like "there is a problem with the servers".
So after completing block nr. 18 just an hour ago, I connected again and needed 15 minutes to get my results back and a new block (340 k) in. Thank God it didn't time out, because it would have been just for nothing.
Are others experiencing the same stuff???

Look, I don't mind the program running on my machine all the time, since it's simply switched on all the time. I don't mind calling SETI once or twice a day.
But if for a bloody 340 k of data I need 15 minutes phoneline time, I'm pretty soon backing out here... I don't need SETI to get a skyhigh phonebill again :-(

If you had gone to the Seti web site over the labourday weekend
(I think that what it was in the U.S) and had a look around at the Stats
you might have found that half the stats were in minus figures and
no-one had downloaded completed units in the previous 24hrs, as the
Servers were down and/or were having Hardware Problems, By
Wednesday I think it was all fixed, but every one and his dog would
have been trying to download new units.
I run one copy of the Win 9x Seti client and two of the WinNT Seti client
which means I can run them one after the other, which limits any
problems if the server goes down for a day or so.

If you're planning on using it with Cubase Audio, get a laserprinter
that's HP laserjet compatible and there won't be any problems. You need
a printer that can print in DOS, so don't get the cheaper
Windows-printers as they won't work.
Many inkjets use special commands to enable the graphics, which means
you have to get special drivers for them. If you use "normal" programs,
you can probably use NVDI-drivers and use some inkjets fully, but NVDI
doesn't work with Cubase (other than the screen speedup) - so don't
count on getting the best performance out of a new inkjet - if it works
at all... :(

Somehow it doesn't want to do it. Then a friendly voice up in MGI suggested I try using the Outburst drivers. Copied them over and loaded and it even says LEGAL in the dialogue box. The lttle outline in the layout widow shows the theoretical printed area all the way top the bottom of the page.

But the last 3 inches of the paper is still blank, as if it were using a Letter-size driver.

What am I missing here?

>available.
>TT's CPU cycles at 32 MHz, this Intelbox cycles at over 14 times that fast.
>I know you can't exactly say: therefore it is more than 14 times that fast,

Actually, it should be significantly more than that.

The '030 in a TT can at best execute one integer instruction every two
cycles, and many take much longer than that. A modern x86 processor can
often execute two or more instructions per cycle.
That is, the PC can do perhaps five or more times as much work -
at the same clock speed!

For floating point, the PC can execute the most imortant instructions
(add, multiply) 5-20 times as fast as the '881 in your TT.
Again at the same clock speed!

Naturally, the memory system gets involved in this too.
I'd guess the '030 needs one or possibly two cycles to access its 256
byte data and instruction caches. The PC probably does it in a single
cycle and those caches are somewhere in the 8-32kbyte range depending
on which processor you have. The PC also has a second level cache
which is 128kbyte-2Mbyte depending on your machine.
When the caches aren't enough, you have to go to real memory, where
a modern PC should have a bandwidth of 400-800Mbyte/s. I'm not sure
about the TT, but an AfterBurner can handle about 40Mbyte/s.

So, as you can see, the only thing that may not be at least 14 times
faster on PC is the memory interface and even there it's close (and
the TT most likely isn't as fast as an AB040).
That is, 14 times speed up is a very conservative estimate.
For just about everything that isn't I/O bound, the speedup should be
significantly higher than that.

Sorry, Jacob, the SLM804 uses the ST RAM as a page buffer. You can't get a
PC to behave in this way.

On Thu, 9 Sep 1999 at 23:15:46 a message from Hallvard Tangeraas was
created on the subject of What's going on at "atari.org"?.
>Sure about that? I would think it's the web cache you've been looking
>at, and with CAB, the cache had been cleared or something.
>Try to reload it with "exploder" ;-) and see what happens.
>I use Netscape and have only gotten the "Apache" screen.

Hi

CAB's cache was totally cleared as I reinstalled all my Atari internet
clients.

Using IE 5 (Internet Explorer) I have no problem, and it can't be the
cache. IIRC when using the cache, the time and date of my homepage
DOESN'T get updated and it's bang on....

Hi Joe,

I've been thinking they got into trouble. Erm, how many participants do
they have now, was it 3 million or 10? Anyways, after completion of block
nr. 19 in this machine's record time of 9.34 overnight, I connected
without much trouble this morning and got a fresh one. Let's just hope
troubles are over :-)

>Hang in there,

Don't worry, I will (as long as the connections stay pretty OK)

Hej Johan,

interesting... makes me wonder how an 80 MHz 68060 would fit in here?

Or, saying it different: would the latest h/w developments for Atari
clones come even close to a nowadays cheapo Intelbox? While with AMD
developing their Athlon/Biathlon/Triathlon range of CPU's, the Intelstuff
will soon drop fast in price.
Makes you also wonder what the sales-chances are for a Milan 060 or the
Phenix box...?

If you have Calamus, create your text and then export it as a monochrome image. With some rudimentary math and a good paint program, this image can be converted and scaled to match the exact point size as originally viewed in Calamus, except with the benefits of anti-aliasing.

Essentially it's a way to dump what's displayed in Calamus at 1-1 (100%) with greater clarity. By zooming in on the Calamus vector text at, let's say, 400% and then exporting as a monochrome image, a paint program -- one that has good scaling algorithms -- can turn that bit-image into an anti-aliased version equivalent to Calamus' 1-1 display. For really small point sizes, 800% can be used instead (going any higher will be redundant). Whatever the case, conversion in the paint program is based on the percentage used during the Calamus export.

It's far easier to do than to explain :-)

The benefits are that you have excellent typographical control before beginning the graphic conversions, and there are so many good Calamus fonts to choose from. The Calamus documents (CDKs or CVGs) make good backups, too, in case you need to redo an image (e.g. adjusting the kerning so that serifs don't blend into adjoining characters when scaling to small point sizes).

...
>interesting... makes me wonder how an 80 MHz 68060 would fit in here?

The '060 is similar to the original Pentium for integer operations.
The newer x86 processors with RISC cores should be somewhat better
with regards to work per clock cycle, but probably not all that much.

I don't think the '060 FPU is pipelined, unlike the Intel and AMD Athlon
ones, so those processors might have a 2-5 times (best case) advantage
per clock cycle there. For specific things, MMX/3DNow!/SSE can also make
a huge difference.

I'm not sure about the memory interface on the '060, but if it can
deal well with SDRAM, an 80MHz (I thought 60MHz was the top speed
available) one shouldn't be all that far behind the x86 processors.
The second level caches on the x86's help a lot, though, especially
when it's full speed like on the Celeron/Xeon/K6-III or half speed
as on PII/PIII/Athlon.

For some things the speed difference will be higher than the 5-6 times
the clock frequency indicates (assuming an 80MHz '060), and for others
it will be lower because of the (probably) much less pronounced memory
bandwidth gap.

>Or, saying it different: would the latest h/w developments for Atari
>clones come even close to a nowadays cheapo Intelbox? While with AMD

Not really.

>developing their Athlon/Biathlon/Triathlon range of CPU's, the Intelstuff
>will soon drop fast in price.

That remains to be seen. I certainly wouldn't mind an Athlon for my
next processor upgrade, but I may have to settle for a K6-III/450 for
cost reasons (together with an nVIDIA GeForce256 that shouldn't be
too bad ;-).

>Makes you also wonder what the sales-chances are for a Milan 060 or the
>Phenix box...?

I don't think anyone has bought an Atari machine because of the speed
for a very long time. Some people have a lot of software they want to
continue using without the hassle of emulators, though, may not wish
to learn a new GUI, etc.

Brian, I am using a RAM KARTE board with my CT2B with no problems at
all. Not one bit of noise or flicker in higher resolutions.
It uses a single 72pin Simm and I bought a cheap Generic 16meg 70ns
Ram Module from Radio Shack. Works fine.
I got the Ram Karte board from Systems For Tomorrow here in the USA.
You might want to try and find one of those.
One thing that you might want to watch out for with this kind of
memory board and others like it is, The Ram Karte board has a foam
cover that protects the soldering joints and etc from making contact
with the Falcons Metal Shielding. If you use the standard Falcon case
with a CT2, the shielding may press down on the foam and make contact
with the soldering points which could cause trouble. I just used
normal black electrical tape on the shielding and on top of the foam
just in case.

I do think an Atari is a no-go.
yesterday I looked at benchmarks for PovRay.
I found a mention of a Falcon that took 4 hours to render the
benchmark picture.
A super-Intel-box on 550 Mhz did the same job in 51 seconds.
My deadcheap Celeron 400 box took 65 seconds.

Maybe it is not a fair comparision because of heavy Floating Point
and strongly localised activity of the code.
But I do think that SETI-activity has about te same characteristics
as PovRay in this.

Yes that is a point to consider:

[...]
>point 2: Actually as odd as it may seem, a standard 16Mhz falcon for
SETI
>would be faster than a 32Mhz TT. (not confirmed, but from my
>understanding).
>The processor if optimized DSP would be WAY faster because all it is is
>FFT, which the DSP, basically was designed for.
>
>Could be wrong. and wouldn't suprise me if I was. But well.
>
No, a lot of time is taken by the SETi to do typically functions
where a DSP is specially created for: digital signal processing.
And the throughput of a 32 MHZ DSP is I think comparable with a 400
MHZ Intel.
I seem to remember:
the difference between a software floating point and a hardware
floating point is about a factor of 10, the same as a hardware
floating point against a DSP.

In Current Notes, David Barkin reports favorable POV speeds against PC's in Falcons and TT's equipped with Math coprocessors. Not sure if this is entirely due to the FPU or the comparison to older PC's.

I've been closing the gap since I've equipped my Falcon with the FX board at 40 MHz running CAB in FastRAM. Still a little slower than the AMD K6-2 at 300MHz running Netscape, but I've only got a 28.8 modem for the Falcon. Will check it again when I receive a 56K.

4286. icons

Newsgroup: comp.sys.atari.st
Date: 1999-09-10 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <37d9b5a0@skylite.connect.ab.ca>
Source record: 73669

Hi all,
For test purposes, I compiled a set of ..hmm, maybe around 40 256 color
icons. They feature icons from TV shows such as "Friends", "X-Files",
"Austin Powers 2" aswell as 5 flavor iMac icons and some "color book icons"

For the next few days you can grab it off MagiC Online, but in the future
they should be in the Atari Icon Lib at gokmase.atari.org

PS; You can now use http://bengy.atari.org to access the site again! BUT
the download bay is still offline. You see, MagiC Online is hosted on
GEM.ATARI.ORG which is still unoperational. In the mean time,
bengy.atari.org redirects you to a back up page where I only have 15megs of
space (thus no room for downloads)
When gem.atari.org goes back you, bengy.atari.org will no longer redirect
you to the backup server but to the original unlimited space gem server. I
did this because trying to remember 2 addresses to one page is bad..

Bengy

Date: 1999-09-10 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <37d9b676@skylite.connect.ab.ca>
Source record: 73670

Hello all,
In the rules of the MagiC Game Contest, anyone who wanted to enter the contest must have registered by September 15th, 1999.
However, we did not plan on Atari.org going down, but because it has we have cancelled this registration date as it is unfair to many. We will announce a new entry deadline later this month.

(This change came last night when a programmer who wanted to enter the contest informed me that the registration form on the contest pages does not work - a result of the gem.atari.org server being offline.)

Sorry to say, I don't think so. They closed up shop after loosing a
lawsuit they had brought against a couple of there parts suppliers
and ended up loosing alot of there capital for these great products
and closed if I recall right, before the Mega STe was ever released.
I knew one of the Beta testers for them who use to bring this
prototype to our user group meeting. Was a fast machine on
a Mega ST4.. The fast ram on the board allowed it to load and start
printing a page before a Stacy w/ 4 megs had even booted up
pagestream. The good old Atari days..

>Jacob Maier 613-781-0134 jacob.maier@cgi.ca

The SLM-804 and SLM-605 created were so cheap because
the ST was used for the memory and the brain of the printer.
The DMA interface was the fastest thing at getting the data out
to these printers and vastly faster than the standard parallel port on
PC's at that time. But, the Atari lasers won't work on a PC.

I thought that ZIP drives had only two possible SCSI id locations, that being 5 & 6, so unless you have some new model ZIP drive, the above settings can't be correct.

Later,
Karl.

Either turn on the computer first and when desktop is up turn on the
megafile. Or, Simply reboot (with all power on) and keep the
[Alternate] key down. This will bypass the harddisk.

Next run AHDI.PRG from floppy and create a harddisk (C:\) icon on the
desktop. Double click on the icon and rename the offending file.

4295. 720k bare 3.5 Epson SMD-286 floppy drives for sale.

Newsgroup: comp.sys.atari.st
Date: 1999-09-11 00:00:00 UTC
From: martin.w6@ukonline.co.uk
Message-ID: <37d980c4.20076902@news.easynet.co.uk>
Source record: 73676

They look identical to the Falcon's internal Epson drive as
they have the same front but they are only Double Density.

Instead of beige the front is a charcoal colour. They're
almost as new.

All tested.

Price each is £6 plus £2 postage.

Always consider swops.

Also I still have a few spare Floptical disks. £3.50 each or
5 for £15.

Lastly a plain 520STFM with joysticks and lots of games plus
colour monitor £55 including postage.

Amiga 500 1MEG plus colour monitor, printer, slow modem and
lots of games £90 inclusive.

Again always consider swops.

4296. Convert PC MIDI files to ATARI format?

>
>
> MG
>

I've treid 16mhz altering the step and seek rate to 6ms, I've not tried just altering the steprate to 6ms so the could possibley where I'm going wrong. I'll try altering the steprate only to 6ms and using 16mhz clock, this will settle the matter.

Thanks,
Chris

Hi Christian

It depends on what harddisk driver your using but i think all drivers
have a bypass key. Try holding down the Control or Alternate key.

4303. Milan II Special Report

Newsgroup: comp.sys.atari.st
Date: 1999-09-11 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <37da5ec0@skylite.connect.ab.ca>
Source record: 73684

Hello all!
In the last issue of the German Magazine , ST-Computer, they had a 5 page special report on the upcoming Milan II (Also know as the Milan 060 USB or the Milan 500)

Topics covered in this report include:

* The latest facts about the home workstation
* Division of tasks
* What the new Milan will be able to achieve
* Software packages
* Software prospect
* Operating systems
* Distribution concepts
* Dates and future

Jens Hatlak, (jhatlak.atari.org) translated this article for MagiC online, as we, as well as ST-Computer <who granted permission> both felt it would be of interest to many atari users.
The article is now online, all in easy to understand english :-)

Read it at MagiC Online: http://bengy.atari.org

From: jimsmith@zetnet.co.uk
Message-ID: <37da8656$0$448@news.zetnet.co.uk>
Source record: 73686

Hi All,

I have just been to a local Computer Show and picked up a Seagate Barracuda
4.1 gig hd real cheap ;-)

When I got home and opened the box I got a couple of surprises:
1. The drive is double height
and
2 the scsi connector is unlike any of the ones on my current hds
i.e. not 'normal' and not scsi2 (like the connector on the Falcon.
(I suspect the connector must be one of these 'wide' or 'ultra-wide'
types I have heard about ?)
Can I get an adaptor to be able to use it in my tower ?

Finally, there is a sticker on the drive which says 'Single End'.
Can anyone explain what this means ?

If anyone there had been selling SyJet carts I would not have these
problems......

TIA

Jim

From: Herman Veerbeek <herman.veerbeek@tip.nl>
Message-ID: <7ream2$4gt$1@news.worldonline.nl>
Source record: 73689

I have an Atari 1040 ST with a SH205 hard disk. If I start cubase (3.01) from a floppy-disk, there's no problem. If I put a boot-disk in the floppy-drive and start that way the hard disk and try to start cubase from the hard disk, I'll get the message: "Not enough memory".
Can I solve this problem with a ramdisk-program? I did have one in the past, but when I started it, there was a message that there was only 546 k of memory left.
Is there a ramdisk programma which generates more ramdisk-space and how can I get that?
I want to play Band in the Box on it, and without enough memory, I won't be abel to do that.

Herman

It's ok, I've got it now.

Well this is really great. I want to order three domains but now I
see that the offer is only available for people who wish to pay by
credit or debit card - which I don't have.

Now I'm quite happy to pay up front by brown envelope stuffed with
fivers but come on guys, what's the deal?

>in the RTC chip.

Well, if there was something wrong with the clock, wouldn't the time and date
(for files etc.) always be messed up or wrong? Because my Falcon seems to keep
perfect time - I haven't ever had to adjust or reset the clock since I've had
it - except for the "dailight savings time" change we make here once a year.
Judging by this fact, I would have to say the clock is ok.

>Another possibility is that your system modifications have somehow affected
>the real time clock, for example by some micro-scrap of solder falling onto
>part of the circuitry. Such a scrap will often not stay in one position,
>but will vibrate around thanks to floppy, harddisk, and fan, thus explaining
>why it sometimes works and sometimes not.

Well, the problems did seem to show up _after_ I had the Nemesis board
installed. However, I didn't do the installation myself, so it's entirely
possible that there is some loose solder inside.

>Have you tried the 'twist and shake' fix ?

I haven't tried that technique yet, but I'm about to open the Falcon up to fix a semi-intermittent-partially-non-functioning-sometimes "J" key on my keyboard (which I'm _not_ looking forward to due to all those tiny screws!), but when I do that, I'll have a good look at the mother board and blow out any debris I find.

>Btw:
>I hope I'm not putting you down by implying you might drop solder scrap.
>I have myself worked professionally with soldering since the late 70's
>and it still happens to me occasionally, without me noticing...

Not at all. I do a fair bit of soldering repairs on my old 8-bit Atari computers, and my STE, but I'm always a little hesitant to mess with the Falcon too much... ;^)

Anyway, thanks for your suggestions and help!

-Paul

Herman,

If you have enough RAM to run Cubase from a floppy disk, you should have the same memory available to run the program from the hard disk, UNLESS.....

- Your "boot-disk" (which you really shouldn't need if you install the hard disk to boot automatically from drive "C") must also contain programs or ACCessories that are auto-booting and grabbing some of your available memory. Running Cubase on a 1040ST is marginal at best since you only have 1mb of RAM to work with. Make certain you're not booting any RAM-resident programs (ACCessories or other RAM-resident programs such as menu directories, alternate desktop programs, etc.) or any of the various Cubase modules that aren't absolutely necessary.

Installing a RAMdisk will REDUCE your available memory further and make matters worse. You need to turn OFF all RAM-resident programs, not add another one.

Sheldon

The thing is that paying by CC/Debit card, the registration is near
instantaneous, and as most of the processes are automated, we do not really
have to do much - thus a cheap special offer - it is also an exercise in
ecommerce.

paying by cheque/cash or to be invoiced, you may choose domain option 2 -
which is exactly the same service, but manual processing - then again it is
£25 per year and for this month includes the co.uk fee.

Sorry about this - can someone you know use their card on your behalf and
you pay them cash? A few customers have already done this...

Regards
Denesh

A RAMDisk program sets aside part of RAM and pretends it's a hard drive. You then copy files onto that drive letter and any reads/writes go extremely fast! This gives you less RAM, and so isn't the answer for you. You need more real RAM or continue from floppy. :-(

The font system is a bit of a funny one. Its the only part of
APEX that I can really find fault with. The biggest omission is
the use of NVDI truetype fonts and anti-alias of fonts/blocks.
APEX Alpha is said to alias blocks (maybe fonts too?) but I do
not think we'll see this software now, because from when it was
announced until now I have developed some grey hair! Grey hair
doesn't happen overnight!! :(

I'm sorta kidding about the grey hair (I'm only 29!) but you know
what I mean!...

> I'll keep looking for a Font set that will display small sizes.
> phantomm@kih.net

Calamus fonts abound on CD (for sale) but very few exist on ftp
sites. None I've encountered (including hundreds from the GEMini
Atari CD) look any good in APEX 320x200 video mode...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

It should. But you're right...a Hades or Milan with at LEAST an 040 (060 is
desired) should be needed to make the games 'playable'. I have a 32MHz F030
and while the games work without seizing/crashing/bombing (yet!) I
cannot get
over about 2-3 fps on Doom 1 shareware. I've seen faster ports of Doom running
on Amiga A1200's so it should be able to work on a Falcon...

I've also thought the same. I know the likes of Patrice is one guy doing
an amazing job, but if the Amiga can run Doom....

Wouldn't it be good if the standard 16mhz Falcon could have a Doom app
that made full use of the cpu, fpu, and dsp! :-)

Can someone point me in the direction of an ftp/http site that has desktop music apps to download. I used to have tons of these years ago from all my favourite games from the eighties (most SID converts!). I'm using a Falcon with MagiC now fyi, thanks :)

Also, is there a MOD player than I can use under the MagiC OS? Once again, I had one of these years ago on my old STe, but somehow they get lost over time... :(

Hi,

well, finally at last the Linux bunch is running with a KDE desktop!
So finally I'm no longer working in the terrible textscreen. Hurray!
Still a lot of work getting everything set up the way I want it.

Also finally at last I've found a good off/online newsreader: Free
Agent. Yup, an oldie but it does what I want it to do and it's pretty
intuitive (something which cannot be said of Outlook Express). And
together with OLE, also Turnpike went straight back into the can.

Right now I'm catching up with all the old groups I had hooked on with
Okami/Newswatch, so pretty soon I can get rid of the double work:
using both the Intelbox and my TT for Internet. Which means the TT can
be turned off more frequently, after having been running continuously
for years...

Now the next thing is unsubscribe from comp.sys.atari.st... Nah, just
kidding; it was the first group I subscribed to on my Intelbox and
will stay there forever (well, forever?)

As a follow up to the Sundog under emulation thread.

Sharaz Jek (the one who originally deprotected the game for Automation 116 - I think it was on that one) .. had to redo the crack because the way Pacifist handles TRAP #1 redirection under h/drives .. ie. it doesn't!

He posted a patched version on the net over a year ago, so I personally have got no idea where to get it from but if you ask around I am sure you'll find it.

Source record: 73511

I treid today altering the STEP rate to 6ms and the drive sounded just as it did before. Altering the SEEK rate to 6ms will make the drive sound more "rough", though it won't boot of the disc, Altering SEEK and STEP to 6ms works best but does not get very far in loading from the disc, 1.44 discs even at 16mhz does not work.

I'm assuming that TOS is doing something a littlemore than jsut latering the STEP rate of the drive, you may set this value but does it alter something else which no one seams to be aware of ??

Have you guys looked at Bad Mood? (I gave urls earlier, but just in case:
http://rand.thn.htu.se). If only it were a "simple" or even "not too
complex" task to merge this rendering engine with the rest of the Doom game
engine. I'm sure Patrice has looked at merging his own DSP renderer (the
"french doom" probably mentioned at the BM homepage) with his Doom port....
just its too much unfortunately...

Anthony

I think they are after cartridges!!!!! although I've not heard of these
being available on ROM's etc.....

I have heard of Mega-lo-Mania on disk:) I have a copy for sale along
with First Samuri:))))

>domain.

Ahem - I like Peter Gradwell and I will not knock his service - would not dream about doing so... however you should be up front with the price you have quoted that Peter charges:

£10 for 2 years: domain reg - nothing else - just parked
then on top if you want mail and web forwarding, you pay £10 per year

thus in total, £30 over 2 years. :)

This is near enough the same as we charge for a similar service - £25 + VAT
for two years for domain reg, mail and web forwarding. :))

So, as we both charge similar, it is up to you whoever you choose...

Regards
Denesh

4340. TAF Meeting September 15th - programming, IDE drives!

Newsgroup: comp.sys.atari.st
Date: 1999-09-12 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <dreibel-1209991657100001@ts7-59t-30.idirect.com>
Source record: 73523
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

Agenda for the Toronto Atari Federation Meeting, September 15th, 1999

We start the beginning of the TAF meeting season by taking a look at programming! Always wanted to design a program? Do you want to find a way to get your Atari to do something it previously couldn't. Not impressed with what TOS programmers have done and think you can do better? Tonight we'll give you an idea on how to go about it! We'll look at the different programs out there for designing and assembling your programs, including GFA Basic, STOS, and Sozobon. Be sure to ask lots of questions!

Also - Ken MacDonald, TAF's intrepid president and North American distributor of Mario Becroft's hardware solutions, will be demonstrating how to install the IDE board
inside your ST's case to allow for program storage without funny boxes outside the case,
plus news of new Becroft developments like the AT/serial mouse adaptor of attaching PC
keyboards and mice, and a new dongle that will provide both SCSI out and Ethernet for stock
STs (two words: CABLE MODEM).

It's going to be an informative and fun time at the next TAF meeting! See you there!

UPCOMING TAF MEETINGS:

OCTOBER 20TH - Graphics and Graphic Design
NOVEMBER 17TH - The Famous and Amusing TAF FLEA MARKET!
DECEMBER 15TH - CHRISTMAS PARTY + MIDI Entertainment

TORONTO ATARI FEDERATION is dedicated to the preservation and continued use of
the Atari 8-bit/ST/TT/Falcon line of computers, users of the Hades and Milan clones, and users emulating these platforms on Macs and PCs. Meetings are held on the Third Wednsday of the month from September to June in the North York Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge Street at Parkholme Avenue. Parking garage inside the complex. Those using public transport can take the TTC's Yonge/University/Spadina Line to North York Centre Station. Meetings start 7:00 PM, $2 to non-members. Membership is $25 a year, and includes a subscription to the PHOENIX newsletter. A membership in TAF IS Atari support!

>If you're planning on using it with Cubase Audio, get a laserprinter
>that's HP laserjet compatible and there won't be any problems.

The laser has another advantage - the print is waterproof. Most inkjets will smear if you allow a drop of sweat (or spit) to fall on the printed page. The laser should also be cheaper to run if you print a lot of copies. OTOH if you also want to print in colour, then lasers will be out of your price range.

I don't think there is much difference between an inkjet and a bubblejet - mostly proprietary names. Both usually work with small heating elements that expel drops of ink when on. But the Epsons are different - they use piezo-electric crystals that contract when a voltage is applied and expel drops of ink that way. No heating may mean more regular (and smaller) droplets.

I still have the following Atari TOS ROM's in stock. You can have any of these sets for $5 each plus shipping.

- TOS 1.0 (original 6-chip set)
- TOS 1.0 (2-chip set)
- TOS 1.2 (2-chip AtariST ROMs)
- TOS 1.62 (2-chip AtariSTe ROMs)

Reply in Email if interested. Let me know your shipping address so I can let you know the shipping cost. Priority Mail shipping within the continental USA is $3.20.

>Is there a ramdisk programma which generates more ramdisk-space and how can
>I get that?

Herman,

You are not thinking straight. :-) Where do you think the RAM for the RAMdisk comes from? Main memory! So having a RAMdisk can't increase the amount of memory available for a program. The only time the idea could perhaps work is if the problem was due to memory fragmentation. Try starting up the hard drive with no ACCs, AUTO programs or CPXs (except the ones you need, like the hard disk driver). But if you can, upgrade to 4 MB - provided you can get the adapter, the SIMMS are cheap enough! (On a Falcon you can use OUTSIDE which offers virtual memory by swapping some data from RAM to the hard drive; but this won't work with all programs.)

Regards, /Peter/

In which case, unless Signum! can export in some kind of standard format
such as RTF or Word Perfect (I'm not familiar with the program), the only
method which springs to mind is to either save the contents out of Signum!
as plain text, or load the files into Papyrus (which will read them) and
save them out as RTF, making sure you select the Windows options for RTF
export.

Don't know of any direct way to convert the files to a PC-usable format.

4350. 1040STfm TOS 1.00 question:

Newsgroup: comp.sys.atari.st
Date: 1999-09-12 00:00:00 UTC
From: Prince Corum <corum@sasquatch.com>
Message-ID: <7rhm27$681$1@news.sasquatch.com>
Source record: 73533

How do I tell if I have the two or six chip configuration? I need to do a TOS upgrade (obviously, if I have TOS 1.00) and I can't readily ID the TOS chips (at least I don't THINK they're marked...).

Also, where can I get TOS 1.06 ROMs?

Anyhow, my system will be up for sale if I can't get a newer version of TOS for it as I have to move and need $$ anyway.

Does anybody out there have any use for a Tweety Board? I bought one from somebody last year, but since I never found a visual composer that supported it, it's not doing me any good.

Any help would be most appreciated!

Thanks!
Louis

Louis,

> How do I tell if I have the two or six
> chip configuration? I need to do a
>TOS upgrade (obviously, if I have
> TOS 1.00)

You'll have to open up the system to see if you have a 2-chip or 6-chip set of TOS ROMs. Most STfm boards have all 6 TOS ROM sockets installed, or they're at least marked on the mother board so you should be able to easily identify the ROMs. However, even though there may be 6 sockets, if your system only has 2 ROMs installed, the board is set up for a 2-chip set of ROMs, and that is what you'll need for a simple chip swap installation. If your system has a 6-chip set installed, that is what you should look for.

> Also, where can I get TOS 1.06 ROMs?

The direct plug-and-play upgrade for a 1040ST is to use TOS 1.02 or 1.04, not 1.06 which is the first (buggy) version of STe TOS and will probably require mother board modification to work in your ST.

yes that's the SL,a task switcher part of the package it is more
tolerant of other prgs/auto folder stuff,has he tried to boot on a bare
system?,I have a mega STE that won't run it until I first run Breakthu
and quit weird!!

4357. SW compatibility between models

Newsgroup: comp.sys.atari.st
Date: 1999-09-13 00:00:00 UTC
From: themrfreeze@my-deja.com
Message-ID: <7rjmth$75m$1@nnrp1.deja.com>
Source record: 73450

Hey all.

I have a question regarding software compatibility between different models. My only experience (from way back when) was with 520s and 1040s.

How compatible is your average piece of software with newer machines, like the STe and the TT030? I suppose that the version of TOS makes a difference to some extent, but I'd imagine that at least with the TT030, some hardware issues with the 68030 might have made some software incompatible.

From what I've been able to gather, the Falcon was a completely different beast from the others, so I won't even ask about that one. :^)

Thanks much,

Chris

I have since learned a little more about my purchase.

I went to the Seagate site and got the spec sheet; it is apparently a
SCSI-2 Fast Wide mechanism. Hopefully a trip to a local computer shop will
provide me with the adaptor I need.

I also spotted that Seagate supply manuals on-line to download, so I got
the one for this drive (about 800k).
Unfortunately, it was only available in .PDF format (Adobe Acrobat ?)!!

Can anyone suggest a way of converting it to ascii on the Atari ?

Thanks.

Jim

4362. Info needed on Vortex 386 for MegaSTE

Newsgroup: comp.sys.atari.st
Date: 1999-09-13 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7rjj67$4mq1@news.ajou.ac.kr>
Source record: 73455

Just got a Vortex ATonce-386SX for a MegaSTE and need a little
more info about it. I have the manual and software disk which
is version 5.21. Was this the last version of the software?
If not, do let me know the latest version and what improvements
there are, plus where I can get it at.

Can I use SCSI hard drives with the ATonce-386SX using a ICD
Link II on the MegaSTE?

If so, What is the largest DOS Boot partition I can use and what
is the largest DOS compatible TOS partition I can use with the
ATonce-386SX?

If I can use hard drives with the ICD Link 2, I suppose this
means that ICD's hard drive software will be ok to use.
What about HD Driver, can that also be used with the Link 2 and
the ATonce-386SX?

I didn't see much info about using the Modem/Serial Ports of the
Mega STE in the manual. Will Modem port 1 work in DOS with the
ATonce-386SX? How about Modem 2 and the Serial Port?

Any help with this is much appreciated,
phantomm@kih.net

Well, these programs can probably be found somewhere on the net.
I got these programs from Atari Corp when I bought my ST-book, so
I really don't know where to find them on the net. I am sure there is
some FTP site that has them.
I also have a version for the Portfolio.
If you can't find them, send me an E-mail.

Regards, Ernest.

Under ten hours?? Forget what I said before! Take off and never look back at SETI@home!!! You're going to make the rest of our averages look bad! <LOL>

Seriously though, that is most impressive. As far as the troubles being over, I wouldn't count on a perfectly smooth ride just yet. Everything about this is in its infancy, and there are bound to be more growing pains. I HOPE there won't be too many more, but I wouldn't be surprised if there were.

> >Hang in there,

Yes I have looked at Bad Mood. It is fast enough to be close to almost
playable, but the latest version is at a guess 2 years old which tells
me its now officially a dead horse! I had version 3.07 or such; if it
HAS been updated (maybe to the point where things move!) please can we
know?!

Kind regards,

> specific. Ta, Steve.

I certainly do! I use a Mac printer cable to do null modem transfers between my Falcon and a PowerMac. It works very well although it needs a bit of setting up. On the Falcon you need HS-modem to allow faster transfers, CoNnect or a similar comms program. On the Mac a fairly standard comms terminal program is needed, and I use and recommend Z_Term. Of course you will also need a Mac printer cable. Plug it into the Printer port on the Mac and the LAN port on the Falcon. You MUST have HS-modem or you will not be able to select the LAN port on the Falcon.

Following are the settings I use...

Transfer Direction	Mac->F030	F030->Mac
Baudrate	57600	230400
Flow Control	Hard/RTS-CTS	Hard/RTS-CTS

Always have 8 data bits, 1 stop bit, no parity. Always use Z-modem tranfers, CRC error checking, 1024 byte blocks. That should give reliable transfers. Also, make sure that 'Allow Multi tasking' in the 'terminal options' is NOT checked on. This means the mouse input is suspended and the transfer will be 20-30% faster as a result (from my experience).

Setup both computers the same. I'm not sure the reason why a much higher speed is achievable when transfering from the F030 to the Mac (15000cps is common, 4300cps is as good as I get from Mac->F030).

Experiment with the setup as your machine might work in a different way to mine.

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

> the hard disk, I'll get the message: "Not enough memory".

This is probably because you boot disk runs a program or two that take
up some memory. You have to be aware that Cubase normally needs at least
2Megs to run. It will run in degraded mode with only 1meg by disabling
several features, but if you have slightly less than that with
accessories or AUTO programs, then it will not run at all.

> Can I solve this problem with a ramdisk-program?

That would make things even worse. A ramdisk is a way of using system
memory to emulate a disk. This takes up even more RAM.

> I did have one in the past,
> but when I started it, there was a message that there was only 546 k of
> memory left.
> Is there a ramdisk programma which generates more ramdisk-space and how can
> I get that?

No. A ramdisk steals memory from the system. It doesn't give you more.

> I want to play Band in the Box on it, and without enough memory, I won't be
> abel to do that.

I don't know how much BiaB requires, but at least for Cubase, you should
consider getting a RAM expansion, or a higher spec machine.

Hello everybody.
I just finished a Doom version with sound. It uses 8 bits DMA on Falcon
and TT (not tested on TT). Sound routine does not use DSP, so it can
crash if you have a standard Falcon (if you use the mouse).
It is better than no sound at all, than the sound server too, and it
works under TOS.

>
> Also, where can I get TOS 1.06 ROMs?

You can't run 1.06 ROMs in an STF. 1.06 or 1.62 are only for the STE.
The highest you can run is either 1.04 or 2.06.

Anyway, the TOS roms are usually underneath the PSU on an STF. Most
STFMs already have at least 1.02, and possibly 1.04.

> Anyhow, my system will be up for sale if I can't get a newer version of TOS
> for it as I have to move and need $$ anyway.

What's the connection ? Switching to TOS 1.04 or 2.06 won't make the
machine more useful if you don't use it already, and it certainly won't
make it take up less space or sell better.

AAAAARRGGGHHH!!!!!!!!!!!!

How many times will we have to answer this question ?

MIDI is MIDI, whatever the platform you are running them on. Just save
the files as .MID to a DOS-formatted double sided 720K floppy, and
that's it.

Normally different versions of Cubase should be able to exchange .SNG or
.ARR files just as easily. Heck, you can even connect the machines
through Midi and just "play" them over to the other machine.

Try booting with the Control key pressed. This should bypass any ACCs or
AUTOs.

Alternatively, you need to make yourself a boot disk.
You can download AHDI from http://bales.online.fr/atari/files
Unzip it with a PC or an Atari, and copy everything to a 720K
DOS-formatted floppy.

Now, stick the floppy in the Mega, switch it on with the Alt key
pressed. This should bypass the Megafile completely and make it boot on
the disk. For there, you can run AHDI from the floppy and access the C
drive (once you've created an icon).

Hi Chris,

I just thought I'd try this and it works ;-)) I've connected my Falcon to my G3 Mac. I'm using Connect on the Falcon and Black Night on the Mac. They're both set on 57600bps and I'm getting average 5500cps each way for text files, 3300cps for binaries. The only problem is I get a lot of crc errors sending files to the Falcon but no probs the other way. As you say the baudrate has to be the same otherwise nothing works. 57600 is the highest I can get on the Mac 'cause I'm using a serial port adaptor as the G3 doesn't have it's own.

P> also pay shipping.

Would this tempt you?

The time has come for a new owner for the Bear Cavern BBS's equipment.

The following Atari equipment and software are for sale for $500 plus $50 for handling and shipping within the USA.

Optional: Will include an APC BackUPs 400 UPS for an additional $40 which will probably only pay for shipping.

1 Atari Mega 4 STe equipt with 50 MB hard drive, Ajax chip, 1.44 floppy drive. With a JinMouse (better than an Atari Mouse).

2 Atari 14" swivel base monochrome monitors.

1 Atari SC1224 color monitor.

1 1.1 Gigabit Seagate SCSI Toad Tower Hard Drive with Adaptic card.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
This hard drive is the one used with the BBS and contains several hundred Atari, MSDOS and Windows files.

1 540 MB Quantum hard drive with an ICD II adapter.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
Built in the same box, a 750 kb floppy drive. The floppy is good but the cord length makes it unreliable. Best to remove it and use it as intended.

The BBS software is BB/ST by Quantum Microsystems. Old but reliable.
The program has been improved by Anthony Watson (Mountain Software), improving the file library and the File attached Mail.

Maintenance software on the BBS includes, Diamond Edge, Diamond Back, ICD Pro Utilities, SCSIWAIT 3.

Two external SupraFAXmodems, 1 v32.bis and the other 33.6 (these are the ones with the display)

Dozens, if not hundreds of 750 kb disks with commercial software, Magazine files, and STReports downloads and manuals. (Also the Best Electronics catalog).

Cords, powered monitor switch (will switch from one monitor to another including the AC)

Mega STe Field Manual

Lots of software

The F030 is actually a lot more compatble with older software than the tt030. With the use of Backwards 3, about 90% of my programs work, the ones that don't are either poorly written games, Spectrum, and I could never get many of the older paint programs like cyberpaint (the features of this program are fantastic I could only dream of a true color version) and deluxpaint.

B.P.

If the PDF file is online, then Adobe has an online PDF to HTML
converter through which you can pass it. I don't know the URL, but
surely you can start looking at http://www.adobe.com

Joe, look at Nicolas Roard, he's got mean values of 9.56, and I see
David James crunching in 8.46...

>That's good to hear. The rest of us are going to need to keep an eye on you. <G>

I've seen stats from another team, people crunching in a little over 4
hrs... Wonder what kinda machines they use? At home???? Wanna know why
I joined up Team Atari????? :-))))

I'll probably fetch the Unix version too for running under Linux.
Wonder what it will do... At the same time, I intend starting running
VMware on Linux, then run W-98 from there. Just curious about the
performance then, but I figure the crunching will go up to 15-18 hrs.

Meanwhile I'll try and work my way up into the first 10 :-)

4409. Falcon FS (UK only)

Newsgroup: comp.sys.atari.st
Date: 1999-09-14 00:00:00 UTC
From: steve@greenies81.freeserve.co.uk
Message-ID: <7rl484sbu1@news4.svr.pol.co.uk>
Source record: 73479

Hi all, for sale -

Atari Falcon computer, 14mb ram, 250mb internal HD, maths co-pro, mouse, joystick, x2 jagpads, S(VGA) and RGB monitor adapters. 195 pounds.
I can supply a compatible colour printer - Lexmark 1020 with colour & b/w carts for another 35 pounds.
I can also include an NEC multisync 15" monitor which works well with the Falcon (up to 906x600x256c) for 40 pounds extra.

Some software included but mainly PD stuff as i'm keeping most of it for my STE or selling seperatly. Though you do get LLAMAZAP, GRAVON, MULTITOS and a few other Falcon only bits and bobs.

You'll need to collect, give me some petrol money or negotiate P&P.

Regards, Steve.

P> also pay shipping.

Would this tempt you?

The time has come for a new owner for the Bear Cavern BBS's equipment.

The following Atari equipment and software are for sale for $500 plus $50 for handling and shipping within the USA.

Optional: Will include an APC BackUPs 400 UPS for an additional $40 which will probably only pay for shipping.

1 Atari Mega 4 STe equipt with 50 MB hard drive, Ajax chip, 1.44 floppy drive. With a JinMouse (better than an Atari Mouse).

2 Atari 14" swivel base monochrome monitors.

1 Atari SC1224 color monitor.

1 1.1 Gigabit Seagate SCSI Toad Tower Hard Drive with Adaptic card.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
This hard drive is the one used with the BBS and contains several hundred Atari, MSDOS and Windows files.

1 540 MB Quantum hard drive with an ICD II adapter.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
Built in the same box, a 750 kb floppy drive. The floppy is good but the cord length makes it unreliable. Best to remove it and use it as intended.

The BBS software is BB/ST by Quantum Microsystems. Old but reliable.
The program has been improved by Anthony Watson (Mountain Software), improving the file library and the File attached Mail.

Maintenance software on the BBS includes, Diamond Edge, Diamond Back, ICD Pro Utilities, SCSIWAIT 3.

Two external SupraFAXmodems, 1 v32.bis and the other 33.6 (these are the ones with the display)

Dozens, if not hundreds of 750 kb disks with commercial software, Magazine files, and STReports downloads and manuals. (Also the Best Electronics catalog).

Cords, powered monitor switch (will switch from one monitor to another including the AC)

Mega STe Field Manual

Lots of software

It exists a rather complicated way to use your SLM804 with your PC, but
... there is a BUT; you'll have to connect an ACSI able Atari computer to
this chain of devices; one PC, one SLM and one Atari ...
I don't know where you'll find more informations but THIS WAY, YES it is
possible.

4422. MajiC 6 & CT2?

Newsgroup: comp.sys.atari.st
Date: 1999-09-14 00:00:00 UTC
From: bjr@localink4.com
Message-ID: <rttcp7h41iv38@corp.supernews.com>
Source record: 73492

Recently had a CT2 installed.
I'm not even in turbo mode yet and I can't get the thing to boot.
I've tried the Magic patch supplied with CT2 to no avil.
I've tried both MajiC booters, with and without MAGTOROM.
I've tried both patched and unpatched versions of MAGIC.RAM with and without the IDE patch.

What's up? I'm not even in turbo mode yet :/

By the way, I get like 13 bombs at the MagiX Desk top and everything freezes.

The CT2 seems to work fine in regular TOS mode and with Geneva.

Is there a special patch for MajiC 6?
If so, can someone mail it to me ASAP?

Many thanks,
Brian

MAGAZINES great deal! 13 Atari mags, 1 Atari disk all together in one $ 2
super cheap set! email for titles, shipping not included

MEGA STe computer 16Mhz 4MB RAM, 300MB+ internal hard drive, HUGE PRICE $262
REDUCTION - was $425! everything works, Great computer with BIG hard drive

MODEM EXTERNAL 1200 baud Atari classic, AC adapter, great starter modem $ 8
for older computers, incl phone cable, serial cable add $5

MODEM EXTERNAL 1200 baud CapeTronic w/builtin AC adapter & volume $ 8
control, great starter modem for older computers, incl phone cable, serial
cable add $5

MODEM EXTERNAL 1200 baud Packard Bell, AC adapter, great starter modem $ 7
for older computers, incl phone cable, serial cable add $5

MODEM EXTERNAL 2400 baud GVC, AC adapter, great starter modem for older $ 15
computers, incl phone cable, serial cable add $5

MONITOR Master switch between color & mono with a flick of a button! $ 3

MONITOR color Atari SC1224 minor problem: the power button switch won't $ 17
stay pushed in unless you hold it; fix or replace with a switch from Radio
Shack; otherwise works perfect with great picture

MONITOR color Atari SC1224 working $ 32

MONITOR color Atari various models working $ 32

MONITOR mono Atari various models dead $ 14

MONITOR mono Atari various models working $ 28

MOUSE Golden Image optical mouse, no ball, super light, amazing mouse! $ 1
minorly broken, button sometimes works and sometimes doesn't, and it often
doesn't want to move right; comes with special gridded mouse pad

MOUSE original Atari mouse guaranteed working $ 10

POWER SUPPLY external for 520 ST's $ 16

PRINTER SUPPORT STAND 2 plastic legs to hold printer above paper, best $ 3
with larger dot matrix printers, sturdy smokey-clear plastic

PRINTER SWITCHBOX Pengo 25-pin for modems or printers $ 10

ROLAND D-50 Synthesizer, great condition classic synth, includes MIDI $525
cables

SPECTRE GCR the premiere Macintosh emulator - complete and upgraded with $ 26
ROMS (disk/docs/cable)

ST/IME internal clock/calendar from Zubair Interfaces Inc, sets your $ 15
clock automatically every time you boot. Incl box, software and hardware.
Suggested retail was $57.95. Brand new. No guarentee on lithium battery
(estimated 10 year lifespan)

SW ADVANCED Art Studio paint program from Rainbird (disk) $ 1

SW AEGIS Animator animation generator and viewer (disk) $ 1

SW ASSEMPRO assembly language compiler (disk/docs) $ 1

SW BALANCE Of Power strategy game; manual needed (disk) $ 1

SW BATMAN game based on 1st movie by Ocean - fun! (disk/docs/box/sticker) $ 3

SW BENTLEY BEAR Magical Math II, educational, published by Atari (disk) $ 1

SW CRACK'ED game published by Atari (disk) $ 1

SW CYBER Studio Set - hundreds of dollars of great CAD/paint/render $ 18
software! cyber paint v2.1, cyber mate v1.1, stereo cad-3d v2.02, cad-3d,
plotter & drivers, human design disk, cartoon design disk, cyber control
(disk)

SW DAC Easy Accounting software 2disk (disk) $ 1

SW DEGAS Elite - brand new! original disk envelope is unopened! $ 7
(disk/docs)

SW DIAMOND BACK 2 great backup program to most any media (disk) $ 1

SW DR.T's Roland D-50 Editor/Librarian, synth also available see below $ 24
(disk/docs)

SW DUNGEON MASTER includes Secrets of Dungeon Mastery book, considered by $ 1
some to be the best ST RPG game ever! (disk/docs)

SW EKG Teaching By mad scientist software educational, EKG parts/ rhythms $ 1
and pathology recognition (disk)

SW EZCALC good spreadsheet (disk/docs) $ 1

SW FLEETSTREET PUBLISHER v1.0 3 disk set, top notch DTP program (disk) $ 1

SW FSM GDOS 5 disks (disk) $ 2

SW GDOS original Atari version 2 disks (disk) $ 2

SW GRAMSLAM grammar and style checker, checks for 1200 errors, can run as $ 1
an ACC or PRG, works with all word processors (disk/docs)

SW IMAGE CAT complete graphics cataloging system for all Atari ST $ 1
computers (disk/docs)

SW INTERLINK ST packaging/box only (no disk, no docs), beautfiul black $ 1
plastic videotape style box with the company logo all over; slides into a
white Interlink box

SW LEISURE SUIT LARRY 2(?) Looking for Love, classic sleazy fun $ 2
w/pixelated nudity by Sierra (disk/docs/box)

SW LEMMINGS Oh No! More Lemmings - great puzzle game by Psygnosis (disk) $ 3

SW LEXICOR Chronos keyframe animator tt030 v1.3 amazing animator for TT $ 12
(disk)

SW LEXICOR Chronos keyframe animator v1.3 3disks amazing animator (disk) $ 12

SW LEXICOR Prism Paint v1.5b 4disks, top notch paint program (disk) $ 9

SW LEXICOR Prism render TT030 v1.03 top notch rendering program (disk) $ 10

SW LEXICOR all 4 Lexicor software packages together, great deal! (disk) $ 17

SW LIVRE Du Graphisme (disk) $ 1

SW M1 TANK PLATOON still the best tank sim out there, all original $ 6
manuals (heavy Microprose kind:) and box included, includes PC/DOS version too
(will run on 286&up!) (1 DOS floppy is corrupted, but I'll include a working
backup) (disk/docs)

SW MACRO Mouse by Antic, record mouse actions (disk) $ 1

SW MARBLE MADNESS from the arcade version, great fun! (disk/docs) $ 1

SW MEGATRAVELLER missing disk A it seems, disk B only (disk/docs) $ 1

SW MIGRAPH drawing utilities set includes TouchUp, MergeIt and Scan&Save, $ 4
manual for Mergeit only (disk)

SW NEODESK2 v2.0 the famous desktop replacement, might be upgradable $ 1
(disk)

SW NIGHTSHIFT 2 disks game by lucasfilm, so you know it's good! may need $ 1
a manual for copy protection (disk)

SW OMEGA strategy game by Origi (disk) $ 1

SW OSS Personal Pascal v1.02 (disk/docs) $ 1

SW OSS Personal Pascal v2 (disk/docs) $ 6

SW PIPE DREAM game by lucasfilm, so you know it's good! may need a manual $ 1
for copy protection (disk)

SW QUICKST v3 screen accelerator for ST/STe/TT (disk/docs) $ 3

SW RED STORM RISING submarine simulation 2disks one of the best realtime $ 1
strategy sim games for the Atari! amazing sim of realtime submarine combat
(disk)

SW SIMCITY the city simulator, great game! (disk) $ 1

SW SIMCITY very addictive simulation game, may need manual for copy $ 1
protection (disk)

SW SPEEDO starter kit, incl SpeedoGDOS and 20 bitstream Speedo outline $ 6
fonts & 5 disks of fonts from Toad computers; 9 disks in all! (disk/docs)

SW STALKER 2 older version probably upgradable (disk/docs) $ 3

SW STALKER3 v3 best telecomm modem software (disk/docs/box) $ 17

SW STENO 1 older version probably upgradable (disk/docs) $ 3

SW STENO2 v2 best text editor works great with STalker (disk/docs) $ 8

SW SWIFTCALC ST by Timeworks great spreadsheet with graphing 2disks $ 5
(disk)

SW TEST DRIVE 2 the duel, European challenge addon, the supercars addon, $ 1
great car racing game with 2 bonus packs of cars! 4 disks (disk)

SW TEST DRIVE by accolade (disk/docs) $ 3

SW UIS Universal item selector v1.0 the best file selector replacement $ 1
(disk)

SW UMS Universal Military Sim, looks great especially in mono $ 2
(disk/docs/box)

SW UVK Ultimate Virus Killer (disk) $ 8

SW WARP9 speed up the graphics on all TOS machines lots! (disk/docs) $ 11

SW WORD For Word crossword puzzle creator (disk/docs) $ 1

SW WORDFLAIR v 1.1 the integrated document processor (disk/docs) $ 9

SW WORDWRITER ST a fast easy to use word processing system from Timeworks $ 2
that can interface with their Spreadsheet & DB (disk/docs/box)

SW WORDWRITER ST by Timeworks great graphical wordprocessor (disk) $ 1

SW WORLD GAMES by Epyx challenge yourself or a friend in different $ 1
events! (disk/docs)

SW Z-RAM Diagnostics v1.1 for use with Z-Ram RAM upgrades (disk) $ 1

SYQUEST 44MB removeable hard drive w/1 cartridge in 2-bay (1 bay free) $ 65
"shoe box" style external case incl host adapter so you can hook this drive
directly up to any ST without an expensive ICD Link. The case has a DMA thru
connector so you can still hookup your SLM or another drive. Incl DMA cable
and software. Everything you need to get going! *** FULL PRICE, NOT 33% OFF!

SYQUEST CART 44MB each in quantity of 3, no bad secs $ 18
*** FULL PRICE, NOT 33% OFF!! ***

SYQUEST CART 44MB no bad secs $ 28
*** FULL PRICE, NOT 33% OFF!! ***

SYQUEST CART 88MB no bad secs $ 32
*** FULL PRICE, NOT 33% OFF!! ***

SYQUEST CART 88MB quantity of 5, no bad secs except 1 cart $104
*** FULL PRICE, NOT 33% OFF!! ***

GOLF VIDEO VHS Improve Your Golf Game w/Richard Zokol, new shrinkwrapped $ 1

DAISYWHEEL PRINTER DaisyWriter 1500/2000 wide carriage, includes good $ 17
ribbon, has weird interface connector, seems to work but sold as-is

FLOPPY DRIVE 5.25" probably dead $ 1

FLOPPY DRIVE 5.25" tested, working $ 3

SIMMS 1MB 30pin, quantity 4 sold together $ 6

ATARI JAGUAR game Checkered Flag (racing) incl FREE shipping $ 10
*** FULL PRICE, NOT 33% OFF!! ***

ATARI JAGUAR game Iron Soldier (3D robot 1st person shootemup) incl FREE $ 11
shipping *** FULL PRICE, NOT 33% OFF!! ***

ATARI JAGUAR video game console system mint condition, less than 1 year $ 48
old, lightly used, incl original boxes/manuals, A/C adapter, TV conv, 1
controller, with both games *** FULL PRICE, NOT 33% OFF!! ***

Hello,

I'm research source code in C or assembleur for programming the IDE and
SCSI bus of a Falcon 030 (and TT for the SCSI). Could you help me ?

Thank's for your answer.
Best regard

Florent

>No, a lot of time is taken by the SETi to do typically functions
>where a DSP is specially created for: digital signal processing.

Sure, except the SETI stuff may not be well suited to the fixed point
numbers the 56001 deals with (there are other DSPs that do floating point).

>And the throughput of a 32 MHZ DSP is I think comparable with a 400
>MHZ Intel.

I'm afraid not. Even if it had been doing floating point it would easily
be 10-20 times slower (and that's not counting SSE/3DNow!).

>I seem to remember:
>the difference between a software floating point and a hardware
>floating point is about a factor of 10, the same as a hardware

The difference is probably much larger on today's hardware.

>floating point against a DSP.

What do you think the DSP does?

As long as we're talking about normal DSPs and not special purpose
things, they are really rather similar to CPUs. They may have lower
latency, but aren't likely to have better through-put per clock cycle.
Many modern CPUs can deliver at least one floating point result per
clock cycle (not the AMD K6 since that doesn't have a pipelined FPU
(on other hand it has shorter latency than the Intel processors)), just
like the DSPs. Some as many as three or four in the best case.
Also, AFAIK, there aren't many DSPs that can run at 500-700 MHz. There
just isn't a market for it.

Special purpose hardware is quite another matter. The new nVIDIA
graphics chip, the GeForce256, is supposed to do about 50 GFLOPS (yes,
that is fifty thousand million (the Americans would call that fifty
billion) floating point operations per second)...
That chip has more than twice as many transistors as a PIII, by the way.

It has been mentioned in STComputer that NVDI drivers have been written
for that card and I've even seen it advertised. IIRC, the price they
asked was about four times the cost of the card itself...

There shouldn't really be much difference between the Rage PRO and the
Rage II, however, and you can have fVDI with drivers for the latter for
free. Those drivers are currently somewhat Eclipse specific, but it
shouldn't be hard to modify them for use in another machine. Especially
not if the machine has a "PCI BIOS", which I believe the Hades does.

(If the Rage PRO cards had been a little cheaper, I'd probably have
bought one myself and made the necessary changes to the driver already.
I guess I should try finding a used one.)

Hi All,

Where can I get a printer driver that will work on Star LC24-200
colour printer?

I am using NVDI 4.11 so I will need one that would work with that.I
should be able to create a printer driver by using the makeprn.app
that came with NVDI but I have not got a clue what settings I need to
put in.

thanks in advance,

Gordy.

>Recently had a CT2 installed.
>I'm not even in turbo mode yet and I can't get the thing to boot.

A follow up...

I did finally get booted in normal mode...
My problem was that I had been using a Videl patch that caused MagX
to save a _DEV that was not understood properly after the CT2 install.
I just removed the _DEV line from MAGX.INF and it booted fine.

Still no Turbo mode however. Searching for suitable a suitable ST RAM
board before I can even think of it.

Still, a basic question is...
Does the supplied MagiC 4,5 patch work for version 6?

Also, is there a way to get at centscreen resolutions under MajiC?

Thanks,
Brian

Please allow me to add that we do accept cheques and cash for our services - mostly done on invoicing.

However the whole September special offer is based on payment by Credit/Debit card - and thus we are unable to move on allowing people to pay by cheque.

There's siupposed to be one in development...from what I've read a Falcon will just about have enough MIPS to do it if the DSP is used properly and you have an FPU fitted...it's marginal and I doubt if the machine can even display a screen whiole it does it, though I'd lover to be proved wrong and have an MP3 player that only used the DSP and left everything else frr for my PCB CAD package...

The utility is called MAGCSLM and can be found on my web site.

Basically you need a null modem cable and an HP 300dpi printer driver on the PC that is capable of having its output redirected to the serial port, or to a disk file (in which case you don't need the null modem link).

It works but is slow if using the linkup.

Boot with a clean floppy, and use the driver initialise disk, which
should allow you to see the drive, and then rename the problem file.

SS> tried this tonight with no success.

I've found that for certain sites, including the Belgian Atari
archive, I have to add the site to aFTP's hotlist, and then edit the
connection parameters of that entry on the list - setting it to
"Passive Mode" seems to fix just about all the problems I've had.

You can buy it at:

www.centek.fr

I believe they will not ship it to you anymore, but will want you to
ship your motherboard to them for installation. Price including
installation, about 289 euros, a little over $300 I believe.

Tell them John Kolak sent you!

If you want, you can also see if www.systems-solutions.co.uk/cafe/ is
still willing to sell it for do it yourself installation.

Just got a Black Metal Tower Case for a MegaSTE, going to put my
CT2B Falcon in it. However the Tower has a PCB board with alot of
wires and some Headers for ribbon cable connections and etc.
Didn't get any docs and was wondering if anyone has one of these
Towers and has documentation on hooking up the MegaSTE mother board
to the Towers PCB board?
If so, I could really use the info. Maybe I can use the on/off and
reset switch and etc with the Falcons Motherboard.

And does anyone know what the official name for this tower case is
and who made it?

Future Thanks,
phantomm@kih.net

Going out of my league here: Connect the KX88 MIDI Out to the KorgM1 MIDI In. Connect the Korg M1 MIDI Out (could be thru, however) to the Atari MIDI In. This will accomplish what you want.

> I would also like to be able to hear what I am playing when the Atari is
> turned off so that I am not forced to listen through the sequencer.

Simply connect your speakers to the M1 audio out. This way, sound playback is not dependant on the Atari.

> Question: How should I hook this up?

Now I just need a rig like this for myself. There's glory in having to spend 5 hours just to figure out how to wire your setup - it usually means you have a buttload of equipment...;-)

Elite 2 "works" on my Falcon, but is buggy it's hardly playable. Nothing
to do with compatibility, it's like that on all systems.

>can even think of it.

System Solutions have a couple of Centek STRAM boards left, they work very well with the CT2.

>Still, a basic question is...
>Does the supplied MagiC 4,5 patch work for version 6?

Yes it does.

>Also, is there a way to get at centscreen resolutions under MajiC?

Yes, but IIRC you have to use the videomod.app as a replacement for the changeres.app, renaming it and so on as required. It still doesn't integrate into the system as well as Videlity however, so I'm continuing to use it.

The German error message you quoted in another message may mean that you need to swap the running order of NVDI/the Centek auto folder prog around.

If you press applekey-W in MagiC, you can make some adjustments
via the menu's you see. I thought there is an option to make key combinations
to "get" the other mouse buttons. For example ctrl-click = right-click. Read
your manual about this.

Much luck,
Fokko.

>Connect the Korg M1 MIDI Out (could be thru, however) to the Atari MIDI In. This
>will accomplish what you want.

With this setup you will not be able to playback from the Atari
program. You will need extra hardware to get the setup you want:

KX88 Out to MIDI Merger In 1
Atari Out to MIDI Merger In 2
MIDI Merger Out to M1 In
M1 Thru to Atari In

Note that with this sort of setup you must turn off the "software Thru"
in the Atari program.

>
>> I would also like to be able to hear what I am playing when the Atari is
>> turned off so that I am not forced to listen through the sequencer.
>
>Simply connect your speakers to the M1 audio out. This way, sound playback is not
>dependant on the Atari.

We are talking about MIDI here, not audio!

>> Question: How should I hook this up?

See above! Actually I would prefer a standard setup without the MIDI
Merger. Then you must have the sequencer program running but this also
makes channel changes etc much easier when you play the keyboard
yourself:

KX88 Out to Atari In
Atari Out to M1 in
If you want to control KX88 behaviour from the Atari add:
M1 Thru to KX88 In

(Followups trimmed)

Source record: 73357

On 16 Sep 1999 00:11:05 , Carl Zittrer wrote:
I want to connect the following equipment. MIDI in's and out's are indicated.

KX88: IN • OUT

Korg M1: IN • OUT • THRU

ATARI: IN • OUT

The object is use the KX88 as a controller (it has no sounds anyway) for
the sounds on the M1, record into the Atari sequencer (Atari has a built
in MIDI interface), and play back from the Atari into the M1.

I would also like to be able to hear what I am playing when the Atari is
turned off so that I am not forced to listen through the sequencer.

Hi!

Pretty straightforward:

midi out of KX88 into midi in of Atari
midi out of Atari into midi in of M1

Most sequencers/editors etc have a Thru function that lets you
hear what you're playing. As for playing without linking through
your sequencer, this would mean patching directly (KX88 out ot M1 in)
and removing the odd lead. The KX88 has two outs doesn't it?

Good luck!
Al

>
> KX88: OUT 2 Korg M1: IN ,,Korg M1 thru (or out, because some outs act
as a mirror of the in) 2 Atari in,,Atari out 2 KX88 in

I think this should do it,when recording you may need to turn off
something like (local, echo) or whatever it is called in your choice of
sequencer to prevent what you are playing going back to the KX88 and
being sent over and over

hope this helps

Message-ID: <1dy4wb8.123s462mbf8tcN@tnt-10-195.easynet.co.uk>
Source record: 73363

I seem to remember from years ago when I owned my ST that there was a
util to increase the standard resolutions. Though I think they where
'virtual screens', but there was a way to interlace ST-High.. Anyway,
are there utils to do this on a TT ? I know they're set res modes,
unlike the Falcon, but maybe using overscanning/interlacing software??
Does anything exist?
Also, why isn't TT-High available? Surely my multiscan can handle
1280x960 in mono?

Can screen refresh rates be changed?

Is there a version of Photochrome for the TT? Or maybe versions of the
Falcon's BSS Apex viewers? It'd be great to have a simple ttp
application to handle GIFs and JPGs, even if it simply automattically
switched to TT low res to display the image...

I've no documentation for Stoop, and it may be donkey's years old, but
how can I get this to run on my TT ? (I miss it!)

Does anyone have docs for BIGDOS ? I need to use this in order to use my
Zips in TOS mode (they're fine under MagiC). But I really want to read
the docs before I 'risk' it!

Can someone email me a 'DESKICON.RSC' file for Gem, thanks.

Your only hope for specific spare parts like this is Best Electronics in
California. Expensive and far away. It would probably be cheaper to
cannibalize a cheap second hand STE.

Hi Nick,

The version of Elite 2 I have ran fine on my 4meg STe Tos 1.62.
I played that game many times and never noticed any bugs at all.
It worked fine on the hard drive as well, just never tried it on
the Falcon. I got it new from Toad Computers when the game first
came out. Still have it, one of my all time favorite games.

>Fascinating - I thought all TTs came with an internal HD.
>
>John Logan

They didn't. In fact, since Atari was only providing a small 50MB Seagate drive as a factory installed option, most TT030's that I sold were ordered from Atari without a hard drive to allow the customer to select a larger capacity drive. The TT030 base system allowed easy dealer or owner customization with any size hard drive and RAM capacity.

Brian Roland <bjr@localink4.com> wrote:

> Recently had a CT2 installed.
> I'm not even in turbo mode yet and I can't get the thing to boot.

Mostly a result of ram problems. Your ram must be an EDO module with
8 chips and 60nS refresh. Maybe with this kind of EDO i got the best
results here.

Othersides, you internal IDE, if you have one, doasnï¿½t work in turbo
mode. Original Atari Conner devices doasnï¿½t work in turbo mode.
Same as with magic.

> I've tried the Magic patch supplied with CT2 to no avil.
> I've tried both MajiC booters, with and without MAGTOROM.
> I've tried both patched and unpatched versions of MAGIC.RAM with and
> without the IDE patch.
>
> What's up? I'm not even in turbo mode yet :/

Yes, first you must get a stable access to IDE/Ram than MagiC works
fine. Using MagiC6 on an internal 2.1 Gig Toshiba (MAT) IDE.
Nice, quick, fast.

> By the way, I get like 13 bombs at the MagiX Desk top and everything
> freezes.
>
> The CT2 seems to work fine in regular TOS mode and with Geneva.
>
> Is there a special patch for MajiC 6?

Same as you have. (Or take newer patch files from centec site)

DOITF030 contains all what i know about CT2, fitting, access..

>drive to it. How do I go about doing this?

As far as I know, for an ST you'll need a host-adapter.
ICD made one called 'the Link'. There was also one called Link 96, by
a German company called Wieczorek.
Software: Zip/Jaz Tools by Oregon Research, or HDDriver perhaps
will do also.

Bye
Guido

4495. Re: looking for roms of atari TT

Newsgroup: comp.sys.atari.st
Date: 1999-09-16 00:00:00 UTC
From: Your Name <drclu@swbell.net>
Message-ID: <37E114D9.6F1@swbell.net>
Source record: 73375

Well, I know it was not listed there Sheldon, but just for a overal all points bulletin, I am in need of a set of TT TOS roms and a Ajax(?) chip to run the floppy drive.

Got a parted out TT I'm trying to bring back to life. For that matter, I'll check the rom image website that was suggested earlier and see if it's there. Otherwise, if anyone knows of a place to find the images, cool! I believe it was said a one meg E-prom (27C010 ?) would do the trick. Get them burned and I'll be in business.

Take care folks!

Source record: 73377

Hi, just to add to the addage "misery loves company" I too am a TT030 user. I'm not sure about the TT high. I know that it required a special monitor, but like you said, you would think that with a software hack and a multi-sync monitor this would be possible. I know I'm curious since I have yet to see TT high. Hell, I never got to see a TT in action until I finally went out and bought one.

Jpeg... there are various utilities that came with mine. I hope to find one that works. There is a Jpeg to gif and visa versa... keep in touch and I'll try to let you know what happens.

Beyond that... hey, I'll routing for yah fellow TT user.

4498. Spectre GCR.. what's it capible of?

Newsgroup: comp.sys.atari.st
Date: 1999-09-16 00:00:00 UTC
From: Your Name <drclu@swbell.net>
Message-ID: <37E11809.66CF@swbell.net>
Source record: 73378

Hi folks, got a TT030, and Spectre GCR with version 3.0 software.

Alright, I'm a direct port from the Macintosh world. I'm trying to get my TT to be my primary computer, but I would like to have SOME Newton utilities to use, and if I can get through Mac emulation for now... cool.

I have seen on the internet a mention of Spectre GCR and a software update to use System 7.1. I have heard in the winds about Spectre being used with system 8!! (which technically if Spectre allows emulation of a 68K macinotsh, that is very possible, but I understood that Spectre emulation starts clashing with Macintosh software around system 6.5 or so.)

So what is possible? How can one beat the system 7 barrier on Spectre GCR?

If you don't already have a host adapter (ACSI -> SCSI) you will need to
find one. You can then attach any SCSI device to the ST.

Yes TT-high requires the Atari 19" display. I think it was called a TTM195 or something like that. I've seen 'em on eBay from time to time. Very heavy and expensive to ship, some of my sequencing buddies swear by the large Atari display.

I'd love to be able to edit 60 bars at a time in Cubase on that display.

Virtual resolutions are probably available, but as I hate these I've never looked for them. You can forget about overscan - there was a hardware-solution available many years ago but I never worked really well.

> Also, why isn't TT-High available? Surely my multiscan can handle
> 1280x960 in mono?

You need a ECL-monitor for this. Perhaps you can find some hardware to convert between TTL and ECL, let me know if you do.

> Can screen refresh rates be changed?

No.

> Does anyone have docs for BIGDOS ? I need to use this in order to use my

Don't use BigDOS, it's very unreliable. Use HD-Driver and partition your Zips to one partition with "TOS+DOS" enabled. This will let you read and write the same Zips under TOS, MiNT, MagiC, Windows, Linux...

Is L.O.V. that 3D/fist person adventure set inside a castle or something
similar? I think it was by US Gold, not sure... I can remember the game,
but not the name/company ! Wish I still had this, as it was superb.
Hope it runs on a TT - even faster ;-)

I was slightly luckier then, I got to play with one years ago @ the
London Atari fair. I think it *may* have been the 16/32 PDL stand. I
just remember being extremely impressed by the small icons and the
colourful desktop (I "only" had an STe then!) :)

These are just for 5 or 6 zip discs that I originally created on my iMac
in DOS mode. I've never got the time to reformat them so I'm reading
them the lazy (bigdos) way! :-}

4515. advice on MIDI routing

Newsgroup: comp.sys.atari.st
Date: 1999-09-16 00:00:00 UTC
From: czit@gte.net
Message-ID: <czit-1509991705540001@1cust200.tnt2.san-fernando.ca.da.uu.net>
Source record: 73441
Cross-posted to: alt.music.midi,comp.music.midi,comp.sys.atari.st,comp.sys.atari.st.tech

I want to connect the following equipment. MIDI in's and out's are indicated.

KX88: IN • OUT

Korg M1: IN • OUT • THRU

ATARI: IN • OUT

The object is use the KX88 as a controller (it has no sounds anyway) for
the sounds on the M1, record into the Atari sequencer (Atari has a built
in MIDI interface), and play back from the Atari into the M1.

I would also like to be able to hear what I am playing when the Atari is
turned off so that I am not forced to listen through the sequencer.

Question: How should I hook this up?

Thanks for your opinion.

Hi Steve

Maybe it is a configuration issue. Do you have any downloadpath
configured in aFTP? 2 bombs is, if i remeber correctly "disk not reday"

I know that people told it is not possible, but this is not true.
There is a pin that detects if the TT 19 inch screen is availabel. You should use this pin. I can not help you more then this, because I am not a hardware man. But I am sure if you ask at the right places, someone can help you.
When your TT 'sees' the 19 inch screen you can only work in TT high.
So if you want to be able to use the other resolutions you need a kind of switch.
I hope you get it to work for you.

Cecil Westerhoff.

Before acquiring a NOVA board I used a Swedish program called View ST/TT 1.32 that displayed 256-color images while in TT Medium (or at least returned to that resolution). I used the program for a number of years -- a handy way to overcome the video limitations of a stock TT. There's no support for JPEG, though, and only the older GIF format (87a) is supported (whose decompression routines are written in assembly).

Still, in many ways the best program for viewing graphics with a 16-color TT display is Imagecopy. Its dithering, albeit processor-intensive, is excellent -- worth the wait.

For a TT-specific paint program, try the Cranach demo. It has a 256-color preview mode that works well. Although Cranach doesn't support JPEG or GIF, in conjunction with a conversion program (like Imagecopy) the demo can be used to view 256-color images while in TT Medium (through a rather sophisticated low resolution hack):

The voltage control feedback is taken from the 5v line so if this is varying
so will the 12v.

So, concentrate on the 5v output. I'm not familiar with these particular
supplies but there will be one (or two) large electrolytics (probably rated
at 10v WKG or so) just downstream of the rectifiers. If this (these) show
signs of leaking then you have found the problem. Otherwise, why not
substitute them anyway, these things can be got for a few cents.

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

I've added more and will be adding more Hardware, Software, Books and Accessories for Classic 8 Bit and Atari ST. So checkout what's new on my WebSite. I have 6 different Catalogs, and my SoftWare Catalogs are my largest. They have the biggest Byte Count. And remember if you cant come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to meet with other Atarians. Read the Ad near the bottom of this message.

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. We meet the 2nd Tuesday of each Month. Our Next meeting will be Tuesday, September 14th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. Get together with other Atarians. Make friends, meet new people, maybe find an old friend. Eat Pizza, drink Pop & Beer in a decorative atmosphere. Bring your family to a family friendly place. For more info try:

Memories flooding back here - I used to have this on my ST years & years
ago! I'm sure I bought it from the FaST Club too. Not much point looking
for it now though, esp if it can't handle todays jpg's and 89-Gifs. :-(

> Still, in many ways the best program for viewing graphics with a

Just bought this from FaST Club last week. Brilliant app, but slow for
quick viewing.

Kevin,

Been extremely busy and haven't had time to e-mail or respond about
the strange file. Its still on the hard drive as I haven't tried
to remove it as of yet.

I did go as far as running Diamond Edge 2.04 on the partition and
nothing was reported as being wrong.

Mike also e-mailed two programs for this and I haven't e-mailed
him either so don't feel left out.

I do appreciate your help with this and as soon as I get the time
to fix it, I'll post something about it. And will reply to the e-mail
that was sent regarding it.

4536. Magic OnLine Problems?

Newsgroup: comp.sys.atari.st
Date: 1999-09-17 00:00:00 UTC
From: Bob King <robert.king@patent.gov.uk>
Message-ID: <37E246CA.896FA7C6@patent.gov.uk>
Source record: 73319

Just seen a rather strange message from the Webmaster at the thor.prohosting.com backup site for Bengy Collins' Magic OnLine page. I had the impression Bengy had just taken (successfully) some exams and was now back in business. Now it seems he has moved to Calgary, is taking a years sabatical before 'going to school' and may need donations to ensure the updating of the site - he no longer has access to a computer/ISP.

Any one know anything ..... just curious.

As an aside, and a self congratulatory 'we atarians don't do things like that'..... I visited the uk.adverts.computer news group recently and saw two examples of very keen if not sharp practice. In the latest, a FS message refered to a 'small' SCSI HD of unknown size, with the request for offers incl ï¿½4 pp. From the details he gave I established the drive to be an IBM 0662-S12 1.2Gb !!! and still being made. In the meantime someone posted 'Ill give you ï¿½5 inc p&p. You obviously have no use for it'.
I sent the seller my info. Needless to say, he has withdrawn the HD from sale and is to buy a SCSI interface card. I resisted the temptation to tell him that the out of date, slow etc etc Falcon has a SCSI2 interface built in.

Bob King.

Message-ID: <937585570-313957AEicMi@xs4all.nl>
Source record: 73320

Hi,

I recently upgraded Magic. The old one was patched to look no longer
for the Falcons internal IDE dirve, which I don't have.
Some time ago I patched 6.0 with a small program from Bengy's site.
Seems I cannot find that program anymore and Magic on Line has become
Magic off Line.
Anyone having this program and willing to send it to me?

Thanks
Guido

TT-High outputs a completely different signal range than VGA.
This requires a specialized high-speed monitor using ECL technology.
Possible brand name are mentioned on my homepage.

> Does anyone have docs for BIGDOS ? I need to use this in order to
> use my Zips in TOS mode (they're fine under MagiC).

If you use HD-Driver as your hard-disk driver, you won't need any
BigDOS under any circumstances, unless your total number of drives
go beyond P: letter.

I think you'll hve some difficulties to fix this power supply; a few years ago I had the same problem and I succeeded to find an electronician who was able to fix the power supply but a few days later the problem was back and I had to build my tower with a cheap power supply; let's have a look for a TT power supply at Bestelectronics and you'll see what I'm talking about; they are very expansive.

I've spent some time today on the iMac and copied all my Atari zips to
the HD and then re-initialised them using HDDriver's TOS/DOS option. So
I've no need for BigDos now. Thanks anyways.

> More TT answers at the URL below.

Excellent!!! I'm going here asap (a TT homepage!!!) :-)

Source record: 73331

Hi all,

I recently bought a ZIP250 and it works great with CAF for playback.
6 tracks 48Khz works fine.
My Seagate SCSI 1GB HD doesn't and has all sorts of strange problems,
although it's specs are good enough, even better than the ZIP drive.
So I have this idea to buy another ZIP and get rid of the Seagate.
Is this a good idea? Can I record say 2 tracks on one ZIP, and play back
4 on the other? I have a Clab Mk1 Falcon.

Guido

Hi,

I discovered that some stuff decoded UUE from Win-machines doesn't
display right on Atari's, never experienced the other way around.
Another thing to consider is that the same size of file to attach
gives a smaller file in MIME than compared to UUE. So if the phonebill
gets important, you maybe know what to choose... :-)

Joakim,

I tried to use some of the icons from your site but I'm running into
trouble. I used Resource Master to put them in my DESKICON.RSC file but,
for some reason, I can only save them as a "AES 4.x" resource file. I'm
using a MegaSTe w/TOS 2.05 and I seem to only be able to use "standard"
resource files.
What should I do? I would really like to use those cool icons.

Thanks,
Laurence

From: Laurence Shields <mercybox@hotmail.com>
Message-ID: <37E2BBA3.D09CBECE@hotmail.com>
Source record: 73336

Hey everybody,

I recently bought a Link II from ICD. The manual seems to be for the "AdSCSI" series but I'm guessing that it appliesto the Link as well. The trouble is, I can't seem to get any of the software to work! I keep getting an alert box that says "Nedds ICDBOOT.PRG 6.5.4 or later!" Well, I have version 6.5.5. How can I get it installed if the software that installs the driver won't work without the driver being installed!!? The manual is of little help.
Anybody have any advice?

Thanks,
Laurence

This is the case because they are colour icons and therefore are saved
in this format. I do not know much about how to use these icons with
the original, buit-in desktop, but a desktop replacement (like Thing)
should allow you to use the icons. Thing can be found here:

http://www.cix.co.uk/~inactive/inactive/software/thng120.htm

> What should I do? I would really like to use those cool icons.

Hope you can sort things out. Tell me how things work out! :)
Also, while some icons will work in monochrome mode, some may not. If
there is demand for it, I will consider putting up a page especially
for monochrome users.

>appreciate any suggestions on what brands I should consider and
>the ones I should avoid.

I use an HP 6l laser, works fine.
I also use an HP DJ500, works fine.
And, I use a Canon BJ4100 color, with an Epson LQ2550 color
driver, works fine, but prints a little dark and not really
photo quality. Also note that since the driver was for tractor
feed, it doesn't know about cut sheet(so far) so I use legal
paper.

Stay away from printers that are advertised as Windows ONLY or
MAC ONLY.

Well, starting desoldering all electrolitic capacitors for a start
and replace them by good new ones. These are the passive parts that
deteriorate fast when in hot environment.
If problems persist it is time to have a look at regulators
(active silicium).

I've got a couple more TT questions that I've just thought up(!), can someone answer them please -

Which boot up manager are TT users using (I cannot get Stoop to run - it says it needs 640x480 in 16 cols!) :-/

Why when the speaker is turned on can I hear faint beeping noises whenever I click on something... a menu, an icon, scrolling a window scroll bar, etc, etc... Really anoying and I can't find anything to turn it off (well, without actually switching the speaker off!)

Finally, I've seen pictures of monitors sitting on top of TT's - that was back in the days of 14 inch monitors - but I've got a 17" Formac ProNitron 17/500 and it is real heavy! Is it safe to plonk on top of the TT? If so, can it sit in the centre of the TT unit or just the left hand side (ie, not the HD part). iyswim :-)

Thanks2all

From: "Sheldon H. Winick" <s.winick@worldnet.att.net>
Message-ID: <7rvup1$r4o$1@bgtnsc02.worldnet.att.net>
Source record: 73254

Tim,

The complete kit has already been sold, but I do have an extra hard drive cover available (with the drive mounting rails attached). I can duplicate the hard drive utilities software. It will enable you to add a hard drive to your TT030 and you should be able to find a standard drive activity light at a local computer store or Radio Shack if you want one. If interested, you can have the cover for $5 plus $3.20 for Priority Mail shipping. If interested, please respond in Email to: s.winick@worldnet.att.net

That's incorrect.

To access _partitions_ larger than (512MB on TOS 2/3 or 1 GB on TOS 4),
you need MiNT 1.15, MagiC or BigDOS. Not drives, partitions.

Or freeMiNT 1.15.1 in conjunction with HDdriver. I don't know if BigDOS is
still needed with MagiC but it's certainly not needed with freeMiNT.

Well, if he is lucky! I have now been sent two separate mailings in PDF format by the BSI and in both cases GEMGS (and GS too) would read some pages but not others. Same goes for printing. The problem is that the showing/printing of individual pages doesn't seem to work properly on the Atari, so that if a display or printout fails you have to start again from page 1 :-(Not much fun on a 60-odd page document! That's on an ST and an accelerated Falcon.

No, I mean turning this extra 'sound' feature whenever I seem to do
anything... I'm putting it down to white noise/interference perhaps?
Turning the speaker off (in the cpx) stops the noise, but then I can't
hear anything else (obviously), like my mod musics, demos, games, and so
on. Is the TT renowned for this kind of noise? I know my STe was (left
channel iirc!)

Message-ID: <1dyc9uk.c3a6rk8or1l1N@tnt-10-76.easynet.co.uk>
Source record: 73264

I'm using MagiC and Jinnee on my TT, but I seem to be having problems
with VT52.PRG

It simply doesn't keep the configuration - I'll set it up the way I like
it and save the config (inf file goes inside the same folder as VT52).
Then whenver I reload this prg, the defaults have been restored! :(
Interestingly, if I was to run a TTP/TOS program which is on another
partition then saving my VT52 prefs again will save the inf file in the
folder of the TOS program that I ran. erm, iyswim... why is this?
I'm guessing it's got something to do with "paths"? But, ahem, this
isn't my strong point - can someone give me some pointers.

Thanks
Steve

From: Your Name <drclu@swbell.net>
Message-ID: <37E3BFF7.2354@swbell.net>
Source record: 73265

Here's another related question to go along with this one. I have recently gotton a TT computer. I have been using 19.2K speeds, but I understand that the TT already has a higher speed port. How can I make use of that? I have a 28.8K modem and I want to make use of it.

Also, what is the suggested text program to use with newsie? I have been using first word that works alright, except that lately it has been locking up when I send the mail. Also, my messages are not making it to the news group (currently writing from my old Mac...)

Other than that, surfing the internet has been fun on the TT. I set all the graphics to greyscale and it looks pretty sharp. And I have been having fun surfing to all the sites that ATARI COMPUTING has been pointing out! What a blast!

Talk soon!

From: Doctor Clu <drclu@swbell.net>
Message-ID: <37E3C6BC.5108@swbell.net>
Source record: 73266

Update:

Alright, managed to get Spectre to bring up the Macintosh emulator, and what is really interesting. The hard drive is up with a system 6.04 or so, and it works like a champ. The floppy drive controllers are ingenius... the only problem is... the emulator works sparatically with my 10 year old folppy drive about 2 % of the time.

If I could just get a term program into my drive.. problem solved.. but so far... I'm stuck trying to get a bunch of old drives to think they are macintosh drives...

Oh, that! Well, the sound circuitry is rather sensitive to noise
interference, yes. Nothing that can be done about that.

Hi,

I have misplaced or lost part of the Syquest pamphlet that
shows the code for various diagnostic actions of the lights.
After many years of no problems I now can insert a cartridge and
is spins up but does not access the disk - it then spins down and
I get the following code from the lights: 5 green and 3 orange.
Does anyone still have a description of these codes around?

Fredi Aschwanden of Medusa re-programmed the ATI BIOS so the
card starts up in an Atari mode if no driver is installed.
To access the colour modes and higher resolutions (up to
1,600 x 1,200 in 24-bit is possible, if your monitor can handle
it) on Hades you need to buy this specially-reprogrammed version
of the card, and it will be supplied with a custom ATI VDI driver
for the Hades. You'll also need NVDI 5; exact instructions on
installation are provided with the ATI driver. Contact Medusa
Computer for details of local suppliers.

Hmm, I'm not a MagiC user but can it be that that inf must be on $HOME? I
do know for sure MagiC use this but I can't tell you were it's located.
Somewhere on the C:/ (in /extension maybe)

You may have a problem using ICD LINK because the LINK derives its power from the SCSI device in the chain. I have a SCSI ZIP 250 which wouldn't work as the only device after the LINK. I have to include a SyQuest 230 in the chain. I'm not sure about the ZIP 100; does it have a built-in termination? The chain usually needs termination. To boot up the ZIP you'll need driver software like HDDIVER or ICD ADSCI. These will let you format and partition the drive.

erm, tbh I've not much idea what you're saying - a config that needs
stating to use home (ie, where VT52 is stored)??

Typical, eh! ;-/

I've got another question for you (all) -

Why does my Falcon hate it's cpu cache? Let me explain...
When I boot up in MagiC mode, the blitter, cache, and 16mhz options are all enabled in the System Info CPX. (good!)
But when I boot up in TOS/GEM mode all are still enabled - except the cache. No matter how much I choose to save my options it will always be deselected again upon a reboot. Why?

Sure, I can keep going up to the Control Panel and selecting it on each and every time I boot up - but this is slow and anoying! Plus even a resolution change will make the cache option default back to being off! This really bugs me when I want to play demos and games that won't work under MagiC. :-(

fyi - all that is booted when I'm in GEM mode is FPATCH2.PRG, WDIALOG.PRG and the COPS control panel.

Any ideas?

4597. Dungeon Master Help!

Newsgroup: comp.sys.atari.st
Date: 1999-09-18 00:00:00 UTC
From: darkchyld@pcc-uky.campuscwix.net
Message-ID: <7s0q03$bh4$5@news.campuscwix.net>
Source record: 73280

I've had so many requests for help with Dungeon Master lately
that I've put together this small archive which contains an
ASCII text file with the magic spells and potions, as well as
the first 13 levels in GIF format. It seems that a lot of PC
owners running TOS emulators as well as resurgent ST users
have (re)discovered the mystery and magic found in those dark,
dank dungeons... ;-)

PS Note that I used the following format for names:

DMLEV01.GIF = mono version
DMLEV01C.GIF = color version

with each set in a respective folder, color and
mono...

The file is DM_HELP.ZIP and can be downloaded from my BBS,
(see .SIG) or from the excellant Belgian ftp site at the
following: 193.190.204.128

Catch ya later...

```

You just need a good modern text editor, for example Everest, available
from:

http://www-computerlabor.math.uni-kiel.de/~oschmidt/everest.html

Everest is shareware, there are freeware ones available. First Word is not
particularly well suited as it's a word processor so defaults to storing
files in its native format IIRC (long time since I used it) - may be why
your posts don't work. It's also old software so doesn't understand newer
system enhancements eg VA start etc, and it's a memory hog, which is a
problem on multitasking systems.

> understand that the TT already has a higher speed port. How can I make
> use of that? I have a 28.8K modem and I want to make use of it.

You need to use Serial 2 which has a 115K DTE speed. This is compatible with most modems. The other Modem and Serial ports have higher speeds as well but many are Atari's "best-guess" at what the emerging standards would be. 115K DTE is about right for 28K8 DCE as it will handle 4x in-flight compression (which is normal).

> Also, what is the suggested text program to use with newsie?

I used Everest. A good no-nonsence ASCII editor. Others have been happy with QED.

Hi Greg!

This would be fun, but as I live in the UK (6 hours ahead of you) it'll be too late for me. (it'll be 02:00 on Monday morning). :(

Any chance of scheduling an earlier session some time? This will enable us in Europe to join in too...

Cheers!

James

Hi Trevor,

I've just ordered a BJC2000 because it does what most of the other
printers can do and it is about half the size.

My BJ10ex has proved trouble free but I once tried to get hold of
a replacement head cleaner, Canon UK were useless but apparently
the same is true of all the companies. They aren't interested in
spares and repairs to small printers, they would prefer that you throw
your old printer in a land-fill so they can sell you a new one.

Peter

> with other systems?

AIUI, FAT32 only applies to hard discs. If you could use it on floppies you'd lose space, apparently. I had Grim95 OSR2 with a FAT32 hard drive until recently and floppies still worked. Just changed to Grim98SE (upgrade would be the wrong word, though it seems more stable: but then what wouldn't?), and it seems to read disks OK (just did a quick test, not exhaustive).

My hunch would be that this is nothing to do with FAT32 but lots to do with VFAT. Please make allowances for my rather hazy understanding of the problem in what follows!

I've had trouble with Grim95 (and therefore I guess G98, too - not had it long enough for exhaustive tests!) where it converts your disk to VFAT on the sly (when it accesses it if it isn't write-protected). If you then copy more files to it on a non-VFAT system (eg TOS, MagiC with VFAT off for A:), the new files don't show under Windows as the VFAT entries haven't been made. As it thinks it's now a VFAT disk, it doesn't read the ordinary entries any more, so the files are not there as far as it's concerned. Apparently running Scandisk on the floppy can fix it (not tried it myself, so no guarantees). I came across the problem while transferring data, so I just reformatted the disk on the Atari (quick format from Magxdesk) and started again.

To cheer you up, this problem affects DOS users too... :-)

> I experimented with the VFAT settings for MagiC, but even when disabling
VFAT
> on the A-drive it won't work.

I've never enabled VFAT under MagiC on the ST, so can't speak with any authority, but I would have *expected* things to be OK if you wrote the new files with VFAT turned on for the floppy under MagiC.

> Any solutions for this, except for getting back to FAT16 on Windoze, because I
> won't... :-)

You'd have a job without wiping the thing and starting again, IIRC!

Ugh, no! I hated that (sorry Roger!!) so I keep Stoop on the Falcon and
wanted it for the TT also - but it doesn't seem to like my TT. Strange,
as it requires a TT Medium display to work.. :-/

> S>(well, without actually switching the speaker off!)
> _That_ is my standard setting!

Hmm, it's mine now.. Guess i'll have to get the speakers hooked up to
the back of the TT now!

Nope, I've since found out that those noises are features of the TT ;-(

Sorry with such a trivial post but...
someone was clearing out their loft and gave me an old atari st. I took it home and plugged it in and hey presto! the gem desktop appeared. I went on the net and downloaded some games (in zip format) but how do I get the disks across to the atari as the windows machine won't recognise the atari disks??

Also the picture on the mono monitor is about half size with no apparent control to make it bigger, any ideas atari people. Please.

thanks

Hi John,

well, I bit futher on I tried by reformatting one of the disks with
the Win-95 machine and hey presto!, all the files put on by the TT
were instantly seen... In fact I recall the disk in question came
formatted from the box, I don't recall ever having formatted it.
The other disks, that wouldn't show files were formatted by the Atari.
BTW, the TT works just fine on the PC-formatted stuff, so I think for
now I know how to handle this stuff.

Talking about a steady OS: I just tried to get my Linux bunch down,
but I couldn't... well, didn't try everything but I got an app down,
not the OS. I discovered the other day that while running around 75
processes, it eats all but 4 megs from the 128 megs available. Looks
like it uses mem as efficient as possible, without going to the swap
space.

The simplest method is to format a double density disk (NOT hd disks) as
a 720k disk and stick the files on it, the ST will more than be happy
reading it:)

>
>Also the picture on the mono monitor is about half size with no apparent
>control to make it bigger, any ideas atari people. Please.
>

They do waste a hell of a lot of space, but you can use the controls at
the back of them to stretch the screen.

If it's a colour monitor, some programs (especially STE ones) can use
overscan enabling the border to be used!!

4627. FS: Complete 020 STE Setup

Newsgroup: comp.sys.atari.st
Date: 1999-09-19 00:00:00 UTC
From: Andrew Irvine <irvin@clara.co.uk>
Message-ID: <37E51D61.46BCDFEF@clara.co.uk>
Source record: 73168
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have the following for sale in the UK preferably:

STE 020/68000 switchable, with 6 meg (2 meg Fast RAM), with TOS 2.06, a 56k serial port, battery backed clock. With the 68020 processor and Fast RAM, this computer is faster for raw processor power than a Falcon 030 (everything except FPU, DSP and specialized Falcon functions)

Epson Stylus Colour 200 printer

Protar 40mb Hard Drive (One of the solid German slabs that you can sit the monitor on.)

High res. monitor

Pagestream, Calligrapher, Imagecopy, Diamond Back / Edge, Speedo GDOS and LOTS more disks.

Mail me and make an offer for the lot. May split, or swap for ST Book :)

Great setup, used it for years, hardly any problems. Ideal for GFA basic (what I ran on it for years :)

>gets important, you maybe know what to choose... :-)

Not necessarily - it depends on the contents. I always LZH my files
and then sometimes both UUE and MIME encode them in ESS-Code to see
which is the smaller. At times, to my surprise, UUE is, even if not by
much. I usually send MIME nevertheless, at it seems easier to decode on
non-Atari machines for some reason.

Hi Steve,

S>I'm guessing it's got something to do with "paths"?
I guess that too.

Have a look at your MAGX.INF file, normally on the root directory of the boot partition, e.g. C:\. There is a path for VT52.PRG.

Or, if you don't use MagiC, have an eye to your NEWDESK.INF file and remember it may be replaced at each bootup time by a boot selector.

Sorry, no more ideas left.

Peter

4638. Atari PS3000 power cord: where to find?

Newsgroup: comp.sys.atari.st

Says it all, really. Beats me why PCs have to be so picky about reading
floppies when a "simple" Atari just gets on with the job.

> Talking about a steady OS: I just tried to get my Linux bunch down,

One of these days (when I'm feeling brave and the machine has been working
OK for a while) I really must give Linux a try. The more I hear about it,
the more I like the sound of it. Though I guess there's a steep learning
curve involved unless you're a Unix-head already. MiNT managed to make my
head spin once I started to get below the surface!

Don't use it myself, but Home Accounts 2 apparently has a problem with y2k.
You may be better off with PHEM (Probe House Expenses Manager?), which is
y2k compliant. You can get it from William Wong's Probe House Software page;

I have a whole crap load of atari tech manuals, You know the real good ones that show part numbers and stuff like that.. There is practially every atari component here. 1050 drives, 400,800 xl xe's ST's monitors. All in very good shape, and I'd say the whole lot weighs about 10 lbs (around 2000-3000 sheets). The first person to email me wins the deal for the measly cost of shipping it to you. I have no need for these, and a friend gave them to me who was into that, and upgrading and things. If you would like to see them first. I could scan a few pages, and post them.. If you only interested in a certain manual, I'll see if it's here. These are NOT the manuals that came with the components, but Scamatics and such on how to reapair them.. Worth hundreds of dollars to someone into Atari Upgrading or Repairing. Your's for The cost of Shipping (around $15-$20.00 US).

>> Somewhere on the C:/ (in /extension maybe)
>
>erm, tbh I've not much idea what you're saying - a config that needs
>stating to use home (ie, where VT52 is stored)??

If you are using MagiC 6 then your home folder will be in the
c:\gemsys\ folder.When you first install MagiC 6 the enviriment
varible $HOME is always set so all programs that use this enviriment
varible will save their configuration files to the HOME directory.Try
copying VT52.INF into th home directory....That works here.:-)

Hope this helps,

Gordy.

Yes. That doasnï¿½t work. Also the SCSI adaptor must support TermPwr track
on SCSI bus, termination wouldï¿½n work without term power.

Source record: 73290

Hi,

just discovered something nice again: I used to transfer files from my Atari's at home to machines at work (Win-95/FAT16) on floppies sometimes and never had problems with it. Now my own machine is a Win-98/FAT32 system and whatever I write to a floppy, it won't be seen on my Intelbox under Win-98. When I use Linux (ext2) I get to the files alrite. Seems that Win-98/FAT32 is incompatible with other systems?
I experimented with the VFAT settings for MagiC, but even when disabling VFAT on the A-drive it won't work.
Any solutions for this, except for getting back to FAT16 on Windoze, because I won't... :-)

Its a low voltage power line if IRC. Mine was powered from the joysick
port. Or connect the ZIP after a ext SCSI HD.

>I'm guessing it's got something to do with "paths"? But, ahem, this
>isn't my strong point - can someone give me some pointers.

I remember having the same problem myself and fixed it somehow and
have never needed to mess with it since. Either I had reverted to an
older version (current one is 1.81) or I'm remembering wrongly and
perhaps it could have been because I removed VT52.INF from the
magx.inf _TRM path.

Anyway, I've just done a search and there's three lurking about...

c:\apps\lha310\vt52.inf
c:\auto\vt52.inf
e:\bin

I can't explain the 1st, other than at some point that must have been
the cwd one time vt52 started. The 3rd is the current working
directory when I start the compiler's command shell (99.9% of use).
The 2nd is down to anything console orientated I start from the
desktop (Ease). This is plainly set to same as _TRM in Ease's
"installed apps"...

c:\gemsys\gemdesk\vt52.prg

...and thus this should be the cwd, but vt52 will have none of it and
gets c:\auto as its cwd.

I have also had it "stuck" autoloading apps and have had to delete
vt52.inf. Current contents of all are...

#COPY 0
#PASTE 0
#COLUMNS 80
#ROWS 25
#BUFFER 50

```
#UPDATE 0
#TIMER 200
#INPUTLINE 0
#CLOSE 1
#TERM 1
#FACE 1
#POINTS 10
#WINDOW 0 0 10000 10000
```

Not much help but you might gleam something from it.

These items gotta go!!! I need the space!!! They goes
as follows:

System Packages for sale:

System 1:
* Atari Mega ST
* Color Monitor
* 500 + Hard Drive w/CDRom & Tape backup Drives
(Comes with 20+ Tape Carts, 4 CD case caddies & 1 Atari CD with
lots of programs - <Gemini Atari CD-Rom, Dec. 1993>)
* Atari SM804 w/Outburst (Needs new drum and toner)
* Migraph Hand page scanner
* 14400 Fax Modem
* Programs left on the Hard Dive are: Data Manager, Degas Elete,
Mortcalc, Retcalc, GramSlam, PageStream, Touch UP, WordPerfect,
Animate, AVSPlay, Film Play, GemView Demo, Iff Src, JPEG, Player,
Games: Battle Chess, Battle Ship, Hackman2, Match, Missle Command,
Pinball, Spaceball, Tetris, Games end, STZip, ARC Shell, Esscode, LHARC,
IBM Emulator, Mac Emulator, CalShow6.2A, Geneva, STFax, Warp 9, Stalker,
DB3 Tape Backup Software, G+Plus, Connect, Virus Program and more!

System 2:
* Atari 1040 w/16 Megs and a switcher (8 to 16 Mhz)
* 130+ Hard Drive (In 2 cases connected by a cable)
* 14400 Fax Modem
* Color Monitor
* Migraph Hand Scanner
* Programs left on the Hard Drive are: Data Manager, Degas Elete, Mortcalc,
Retcalc, GramSlam, PageStream, Touch Up, WordPerfect, Word Write, STZip,
CalShow 6.2, Warp 9, STFax, Stalker, AB Calculator, Games: Loom, Match,
Missle Command, Pac Mania, Speech and more!

Hardware:
* Black & White Monitor
* External disk Drive (Needs Power Adapter, Radio Shack)

Software: All With Manuals
* Easy Draw
* Degas Elite
* Typesetter St
* Stalker/Telecommunication Software
* G+Plus
* Migraph OCR/Optical Character Recognition Software
* Mr Boston Official Bartender's Guide
* The Juggler

* Geneva/(Multi Tasking Program) & NeoDesk(Desk Top Prg
* Hyrid Arts Semte Track w/sync box

Software/No Manuals:
* Hybrid Arts Ludwig Music software
(Disk Only)

Games: All with Manuals
* F-15 Strike Eagle Flight Simulator
* Elite/A Fantastic Voyage
* Defender Of The Crown/Knight Fight
* Knightmare/Knight Fight
* ShadowLands/Barbarian Fighting
* Barbarian/Fighting
* Lemmings/Maze and Building
* Ultra V Warrior of Destiny/Knights
* Baby Jo/Baby Super Hero
* Drakkhen/Dragons
* The Pawn/Good and Evil Fight
* Dragon Of Flame
* Breach
* Time Bandit
* Quest Glory
* Romancing The Throne

Games Disk only:
* Dragon Master
* Rambo 3

Programing Software & Book Combination:
* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST

Programing Books:
* Prospero C, Language, AES Bining, Library, VDI Binding
* Atari ST Internals/The Authoritative Insider guide
* Atari ST Graphics & Sound/Mastering Capabilities
* Peeks & Pokes/Hidden Secrets with in the Atari
* Atari ST Application Programming
* Atari ST Gem Programmer Reference

Software Books with no Disks:
* Mark Williams resource Editor For The Atari

Make me an offer I can't refuse. :> Buyer(s) pays shipping!!
All reasonable offers will be considered!!!

e-mail: ctsprod@hotmail.com.com
I'm also willing to set up meetings using these programs:
* IRC(Internet Relay Chat) <everyone can use this>

* Netmeeting
* iPhone

>Anybody have any advice??

Hi there,

I once tried running an 0663 type. Had problems with it too. First of,
does the drive spin up at start or not? Jumper nr. 5 (seen from left
to right) is an autostart jumper. If on, it starts at power up, if off
it starts after HDD initializes the drive. Check with HDUtils if the
drive is listed correct, next activate the ID button and see what it
does then. Maybe you need HDD to use SCSI initiator. I couldn't get it
to work then, next I sent it back and got an 0664 back instead. That
one is differential SCSI and doesn't work at all. Sent that one back
too and after months I got a Seagate 2 gig drive, which works great.
Just looked on my TT for the 0663 specs, I fetched them once from the
IBM sites but it seems either I lost them from CAB's cache or I
overlooked. Anyways, this jumper nr. 5 might do the trick. The first 3
jumpers are the regular ID stuff. Last 3 (nrs. 6, 7, 8) are unknown.
Not listed in the specs at all...

> across to the atari as the windows machine won't recognise the atari disks??

The ST has to have at least a 720K double sided drive. The PC won't
read/write single-sided disks.

Format the disks as 720K format under DOS. and copy the files over. This
should work. Unzip/lzh them either on the PC or on the ST.

Games with the .ST or .MSA file extension need to be transferred onto a
floppy with Makedisk or ST2DISK.

> Also the picture on the mono monitor is about half size with no apparent
> control to make it bigger, any ideas atari people. Please.
>

That's the way it's supposed to be. You can enlarge by taking apart the
monitor (this is *DANGEROUS* if you don't know what you're doing) and
fiddling with some internal pots.

From: Bob King <robert.king@patent.gov.uk>
Message-ID: <37E60ABD.F0C73DD7@patent.gov.uk>
Source record: 73193

Have finally got my free monitor working with my Falcon. Problem was not my plug wiring, but the fact that the monitor needs about 10-15 mins warm up before the blank/rough, but sync'd raster changes to the correct diplay. Works like a dream on 640x480x256x63Hz and 800x592x256x53Hz only, with switching off and back on of one or both computer/monitor making no difference. Leave it switched off however for some time and problem is back. When Merv. --thanks for all your help over the years -- connected it cold to his Falcon, it had been out of use for some time, but started up first time, so could my Falcon be giving low voltages? There seems to be a relay in the circuitry, which seems to click twice when not working and once when working. Any ideas. 15 mins wait is nothing, but if all that is needed is an adjustment of the RGB gain pots, then please tell me.

An unexpected bonus is the very good mono display - Calligrapher Pro is a very good program.

Bob King

Brian,

Not sure if I read your posting correct or not.
Can you boot your CT2B in plain TOS TURBO 4.X or 7.X?

If not, look at the LED on the CT2B and see if it comes on when
you first try to boot in TURBO Mode. Should be a Yellow LED in the
Middle of the board. You should get Turbo Mode working in TOS Mode
before trying other OS's.

If it doesn't come on, then something isn't right. Make sure
you have installed the TURBO/STANDARD mode Switch correctly.
I made that mistake when installing mine.

Just wondering if anyone has made a list of the Atari software
and hardware that may have problems when the year 2000 rolls
over?

Will all Atari machines continue to work correctly?
If so, what about those PC 286/386 hardware boards will those
continue to work? I think most of them rely on the Atari system
clock.

That's where trouble starts. You'll have to buy the packages either new
(if you can find them) or second hand.

I have a page at:

http://www.whalley.demon.co.uk/atari/y2k.html

It contains everything I've spotted on y2k issues in c.s.a.s, plus a couple
of possibly useful programs and links to others.

> Will all Atari machines continue to work correctly?

In most cases yes, though some clock problems are known about (patch
available for the most serious one) and there are some packages with known
problems. If you don't use your system clock or the date and time (as with
many people using their machines for music etc) you probably won't be
bothered unduly by the problems. Main hassle are programs with date
functions, eg spreadsheets, databases, finance packages, possibly internet
software using date/time stamps for cache management or news downloads etc.

> If so, what about those PC 286/386 hardware boards will those
> continue to work? I think most of them rely on the Atari system
> clock.

No idea on this one: if you find out more, let me know and I'll add it to
the page.

Hi Ravi,

J&JT>but how do I get the disks across to the atari as the windows
J&JT>machine won't recognise the atari disks??
as the ST is a gentle machine it will recognize PC formatted disks.

You may try to format on the ST PC-compatible disks but you'll not be
sure they'll work.

Even between PCs there may rise trouble... ;-(

J&JT>Also the picture on the mono monitor is about half size with no
J&JT>apparent control to make it bigger, any ideas atari people. Please.
The (screen of the) SM 124 may be blown up by tuning H-Size and V-Size
controls. But pay attention to keep the quotient H/V constant (~1.6
8/5=640/400) in order to avoid circles becoming eggs...

Tools needed: 1 inbus non-metal screw-driver.

No joke: High voltage is to be found! Danger of life!

This is a good place to start. Read the 'Index' file to get a bit more
info about the titles. Also try in the directories for each of the more
well knwon coding crews...

My personal faves are these...

Obnoxious (obnox_01.lzh and obnox_02.lzh)
Knockout (knock-1.zip and knock-2.zip)

Heaps of others are also impressive, but taste is individual...try a heap
of them!!

On the TT demos are not that common, but try and find TT-Wars demo,
which is a stunner...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

Hi there,

Due to a hard drive crash some time back I have lost my
copies of some software packages that were included free
on my Falcon when I purchased it new in 1994. These are
namely Atari Works and FalconD2D, which I would like to
get hold of. I didn't receive manuals or install/backup
disk of these packages with my Falcon...

Can I get these from the internet (address would help),
or can some nice Falcon owner upload them to me? This
time I will put them on a backup disk!!

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

4683. [Programming]: Reading PI1 files

Newsgroup: comp.sys.atari.st
Date: 1999-09-21 00:00:00 UTC
From: Simon <simon@webprecinct.co.uk>
Message-ID: <937902942.9079.0.nnrp-11.c2deffda@news.demon.co.uk>
Source record: 73216
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

Hi,

I'm writing a routine to load a PI1 file in VB (eaugh!) on a PC(aaahh!), so I can put screenshots of my old games on my website. I can load the palette information correct, then next is the screen information.

What I can remember is each byte is two nibbles(4 bits) - the high one gives the colour (palette index) of one (even numbered) pixel, the low nibble gives the colour of the next (odd numbered) pixel. Yet when I run my code, it looks like I've tried to load the picture in the wrong resolution! (black vertical stripes & distorted graphics)

Now is this anything to do with the fact the atari & PC stores bytes the in different ways (big & little endian) - I dont know if they do, but I should imagine it would cause a problem anyway!

Or is it anything to do with something not being aligned on a word boundary (erk - faint memories of atari programming!)

Please let me know if you can help!

Cheers,
Simon.

Here is a snippet of code (in VB - should make sense!) I'm using to display the image:

```
nCCount = 1
For nYLoop = 0 To 199
For nXLoop = 0 To 319 Step 2
nCPointer = Asc(Mid(strImage, nCCount, 1)) And 15
imgScreen.PSet (nXLoop + 1, nYLoop), RGB(nPalette(nCPointer, 0),
nPalette(nCPointer, 1), nPalette(nCPointer, 2))
nCPointer = (Asc(Mid(strImage, nCCount, 1)) And 240) / 16
imgScreen.PSet (nXLoop, nYLoop), RGB(nPalette(nCPointer, 0),
nPalette(nCPointer, 1), nPalette(nCPointer, 2))
nCCount = nCCount + 1
Next
Next
```

> anyone tell me what those might be?

The advantages of a TOS upgrade depend on what you do with the machine.
If it's mainly for games, keep the TOS 1.00. There's nothing laughable
about it. It's a bit bug-ridden, but it is the one that works best for
games.

You can (almost) easily upgrade to TOS 1.04, which solves a few bugs
with the serial port and hard drives. It also adds support for the
blitter, but you haven't got one.

TOS 2.06 is the most advanced but requires a few modifications on your
machine to run it. This gives you a new desktop with lots of new
features (ability to drag and drop to open files, or to put them on the
desktop, or change icons, support for extra hardware (IDE drives, over
4Mb RAM...), but has some incompatibility problems with older software.

The problem is availability the new TOS roms.

4686. Magic Mac and Atari formatted Syquest 44 cartridges ?

Newsgroup: comp.sys.atari.st
Date: 1999-09-21 00:00:00 UTC
From: Jo Vandeweghe <dipching@ping.be>
Message-ID: <37E7AE60.5B06F53B@ping.be>
Source record: 73219

Hello,

I have now succeeded to install my Magic Mac set-up excepted one thing;
I have not yet succeeded to read my old TOS Syquest 44 cartridges under
Magic Mac desktop; that's annoying because I could transfer all my atari
files in an easiest way ...
I have assigned this drive to AHDI in the setup window but each time the
cartridge is accessed it only open an empty window ...

What's going on ? Can someone help me further ? Is there a hint to
access TOS cartridges under Magic Mac ?

Thanks for any answer.

Jo

A couple of months ago (july) OXO Systems announced in the French
newsgroup that they developed a piece of hardware that does just that.
IIRC it's a simple VGA switch with the hardware build in, something like

the Link. The price is quite reasonable ==> 300FFr ==> ï¿½30 ==> $45

Orders/info at mailto:oxo.systems@online.fr

Yes, Canon is quite useless when you you're trying to get parts from them...

I work in a small electronics repair center in the US and Canon doesn't want to cooperate with us when it comes to ordering parts for their camcorders and printers. No parts, no support... they want everything sent to their service center so THEY can fix it and charge you whatever they want to do it.

It sucks, but HP is even worse to try to deal with. One of our customers brought in a FAX machine made by HP (I think it was an Officejet 500) that had a bad clutch assembly: HP wouldn't sell us a replacement and said that if the customer wanted it fixed, it should be sent to HP for a rebuild. My cost on this little venture would have been $300! You can replace the whole bloody FAX machine for $159! Then again, I think that's the entire point.

4691. Atari PS3000 Power supply specs?

Newsgroup: comp.sys.atari.st
Date: 1999-09-21 00:00:00 UTC
From: eastman@nortelnetworks.com
Message-ID: <eastman-2109991628320001@bftzm4a8.ca.nortel.com>
Source record: 73224

Replies from a couple of people have helped me determine that rather than
just a cable with an odd connector, I need a special power supply for my
Atari PS3000 (combined color display and floppy drive).

I suspect that the power supply spits out the dc voltages for the
floppy on 4 pins and passes through 120V AC to the 2 pins which are a
bit separate on the connector:

```
-------------
| o o o |
| o o o |
-------------
```

Does anyone have specs for the PS3000 power supply?

Thanks.

Comms programs aren't something I use a lot, but ConNect seems to be the one to have. From comments seen here and in magazines, others tend to do non-standard things with GEM (if they use it all) and so cause trouble with modern OSes. I haven't got a URL for it handy, but it's worth trying the UTSI (http://www.ping.be/~ping1030/atari/prg-ind.htm). I do know that the last version was released as freeware (previously shareware, but the author has stopped developing it).

Source record: 73226
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

A PI1 has the format

1*word (usually 00 to indicate low rez)
16*word for the palette
32000 byes for the picture data

The low rez screen is in words for each plane.
1st word = plane 1
2nd word = plane 2
3rd word = plane 3
4th word = plane 4

the 5th word is the next word across the screen (screen base + 8).
This sequence carries on until the screen is filled.

> Any suggestion or help is welcome!

First off, let me state I'm *not* writing from experience here.

What I think you need is STinG set up for a LAN, with BNet to allow disk sharing over it. STinG will let you use whatever ports you have (IIRC both of your machines have LAN ports, so this would seem to be the obvious thing to use - it's likely to be the fastest, I'd guess. Both STinG and BNet should be locatable via the UTSI at:

http://www.ping.be/~ping1030/atari/prg-ind.htm

Also look for Olivier Booklage's site (he's written a STinG web server and an alternative CAB.OVL), as IIRC he has put up some indstructions for setting up a STinG LAN using the MIDI ports. Should be adaptable for LAN ports.

There are better qualified people here who can guide you through the minutiae, including Olivier Booklage and Vassilis Papathanassiou who is the author of BNet.

hi,

The simple answer is format the 720k disks on the PC
"FORMAT a: /f:720" . Check the format with the atari.
patching down a 1.44 disk wont work. The format is
organized differently on the disk. I use 720 disks
formatted on the PC. write the data. verify it.
check the data on the ST. I transfer data commonly
doing this. My machine is a mega4 with TOS 1.04.

The trick is that PC tries to put the directory info
at sector 5. Atari and PC 3.3 both put the dirctory
at sector 11. Apparently the PC does not tell the disk
that the directory is somewhere else.....

Hope this helps some with questions about using 720 disks.

The only question I have is why does anybody care what time
and date the computer thinks it has? I often run older
system with a date in the 70's or 80's. It worked just
fine then and was nominally stable for other reasons.

I have An APPLE II, Commadore, and 1040's and mega4s.
If the date causes a problem I set the date to something
convenient. It works..... Most of the systems dont care
at all. The worst I have seen was date roll over. It thought
it was 1980. Games, compilers and stuff I use run just fine
even when my ST (ICD fast) tells me the date is 2036. Sometimes
I have problems with make but mostly touch realigns the data
and it all works again.

Hi Louis,

PC>so I thought I'd check out a newer version and see what the advantages
PC>were.
get TOS 1.04. It will accelerate the access to any harddisk. And
furthermore it will allow to you to "move" files and rename folders...

But beware: For some games you should prefer TOS 1.0!

My advice: Get a second ST (here it's about 50DM ~ 30$ ~ 16 Sterling)
and have both!

Peter

Hi All,

When I got my first hd (105 megs - WOW!), it had the ICD hardware in the box, so I was using the ICD software.
One of the recommendations in the manual was to use as small a partition C as you could get away with - the suggested size being 5 megs. The idea was that, if the drive went down, you had less to re-install.

In these days of gigantic (and much cheaper) hds, what do people think now, bearing in mind the amount of AUTO folder programmes, ACCs, CPXs etc that are in everyday use ?

Also, when you add in the extra operating systems that are available (Mint, Magic and Geneva), and all their extras, 20 megs is starting to look like the minimum requirement !!

I must admit that I have yet to venture into multi-tasking despite having 14 megs + Nemesis in my Falcon and 12 megs in my TT.
Reading the comments of the people who are using such things on a daily basis makes me think that I could be getting much more fun out of my machines - although I am not sure how I would cope with the completely new world of Mint ;-))

Let's start with some basic stuff: if I want to try multi-tasking, what size partition C should I be looking at ?
Obviously I would want to try all of the available systems to find out which suited me best (read: 'easiest for me'), so would also be looking for advice on what size partition I would need to reserve for Mint too. (Space is not likely to be a problem once I get this 4.1 gig Barracuda installed.)

Finally; what about backups ?
The days are long gone when I backup even my Partition C to floppies !
(Does anyone still do this ?)
I do make regular backups of C to another partition on a separate hd using Diamond Back Up, but everything else gets archived away to CDs nowadays via my SyJet and a friendly PC user with SCSI card ;-)

So, come on you regulars, and tell me what a 'sensible' size would be for drive C.

TIA

Jim

I have a CP30170E on my desk right now, and AFAIK it's not possible to
disable parity on this drive. If this is the case with your drive as well
(I've never seen parity-jumpers on any of the Conner-drives I've owned)
you'll have to add a parity-checker to your Stacy's SCSI-adapter. See
http://atari.nvg.org/ (in the hardware-section) for details.

> 2) I have no jumpers on the front which according to the Segate web page should
> give me a SCSI ID of 0.

This is correct, any other ID will fail.

> I also noticed that the jumper for "TERMPWR Output Enable" is off, do I need to
> put it on?

Important: With Stacy's and Mega STE's you'll *have* to disable
termination on the drive!

> What about the switches on the STacy's controller all 3 are "ON"?

Hm... I can't remember if this gives you ACSI ID 0 or 7, but both should
be fine as long as your driver is configured to look for these.

> Any help or suggestions would be appriciated.

As I said, check parity and termination.

That's quite a good idea, but I'm looking through the remaining cpx's
and there doesn't appear anything that sets the cache or at least gives
the user the option... unless General Info does??
But anyway, surely this would apply under the MagiC OS? But it doesn't,
as it's automatically enabled under this OS.

simply coz most falcon owners at that time had (and still have) RGB
monitors, and they are a bit easier to get the things you want, like
line-double mode. (possible on VGA using 100Hz)

|They didn't. In fact, since Atari was only providing a small 50MB Seagate
|drive as a factory installed option, most TT030's that I sold were ordered
|from Atari without a hard drive to allow the customer to select a larger
|capacity drive. The TT030 base system allowed easy dealer or owner
|customization with any size hard drive and RAM capacity.

Ah. My TT certainly came with a smallish hard-drive. Of course,
having been used to floppies, I thought then that it was large. The
TT was said to be a 'return' (ie broke but fixed and cheaper than
new) and I was told that it was an early version with a 720kb
floppy.

|
|Fredi Aschwanden of Medusa re-programmed the ATI BIOS so the
|card starts up in an Atari mode if no driver is installed.
|To access the colour modes and higher resolutions (up to
|1,600 x 1,200 in 24-bit is possible, if your monitor can handle
|it) on Hades you need to buy this specially-reprogrammed version
|of the card, and it will be supplied with a custom ATI VDI driver
|for the Hades. You'll also need NVDI 5; exact instructions on
|installation are provided with the ATI driver. Contact Medusa
|Computer for details of local suppliers.

Can it drive a Eizo Flexscan at say 1280 x 960 in monochrome? My
present driver can only do so in '256 colours' which on a monochrome
monitor is a bit crazy.

>http://atari.nvg.org/ (in the hardware-section) for details.

I will check the website about parity, but the drive I am removing is a Conner
CP-3020 so I was hoping it would be a simple, straight swap :-).

>> I also noticed that the jumper for "TERMPWR Output Enable" is off, do I
>need to
>> put it on?
>
>Important: With Stacy's and Mega STE's you'll *have* to disable

I see that I left the SCSI terminators in I have now removed them, but what
about the TERMPWR someone else said that I would need to enable it on the drive
if it was not on the controller, which waw do I need it in the STacy?

Thanks again

From: John Perez <jperez@uhunix5.its.hawaii.edu>
Message-ID: <7sbjtijau1@news.hawaii.edu>
Source record: 73109

Greetings,

I just aquired a JRI Genlock M1000 and would like to install it in my Mega ST. Unfortunately, it didn't include any software or documentation. Can anyone tell me what I may need to know for installation? It appears straight forward, except for the stray black wire on the board that I don't know what to do with.

Also, are there any drivers required?

Cheers!

Aloha,
John Perez - jperez@hawaii.edu

>I subscribed to Atari News and all I get is garble, anybody else have this
>problem?

Brian,

Are you referring to A-ONE? What is sent out is a text file which has
been compressed with ST-ZIP. The resulting archive is then uuencoded
using Ess-Code because nothing on the Atari platform can accept a
file attachment like the PC world can. To access the file, you must
reverse the process: uudecode the file, uncompress with a ZIP utility,
and read. Process takes a couple of minutes, tops. If that doesn't
work for you, you can download the ZIP'd file from one of our support
sites, or read it online. http://people.delphi.com/dpj/a-one.htm

wrote:

>A PI1 has the format
>1*word (usually 00 to indicate low rez)
>16*word for the palette
>32000 byes for the picture data

This is one of the pi1 formats.

Degas Elite format saves files of 32066 bytes in size, because they
contain palette animation.
So
1*word (00 low rez, 01 mid rez, 02 high rez)
16*word palette
16*word palette animation
32000 bytes picture data.

A small hint... try run some picture conversion program on your st,
like picfib or Gemview. You can make a batch, generating all the .gif
you need.

For a lot of applications the date makes no difference whatsoever, you're right. However, where a program uses the system date for something important (eg backup programs which use the date/time stamp of files to see which ones need to be backed up as they've changed since last backup, or financial packages which keep track of standing orders etc) it becomes an issue. Games, paint packages, music packages etc etc won't generally be affected.

In the case of some operating systems which keep track of various tasks at boot time and schedule others the date/time being wrong can cause havoc.

There's more to y2k than just clocks, though. It can affect things like data entry. A non-Atari example would be the spreadsheet on my Psion 3a: it understands dates into next century on a calculation level, but you can't enter them direct as it only accepts two-digit years as valid and interprets 00 as 1900. To enter dates in 2000, you have to enter them as 1999 and add 366 days to them in a formula (or 365 for dates before Feb 28 2000 - the whole thing is complicated by the leap year).

HTH

Hmm, BNeT can be used for printer sharing with NVDI. One just needs
to select 'print to file', eg to P:\FALCON\Ux\DEV\PRN (or \DEV\FPRN
or whatever driver). Maybe not the best solution but it works :-)

There is also an lpr utility for STinG that can print to remotes
that have a running lpd spooling daemon.

Were the Syquest disk formatted with AHDI or HD Driver?
I don't remember what it was, but sometimes I had problems reading
disk formatted with HD Driver under MagiC Mac. I had a 44 connected at
one time, and it worked fine. I found that MagiC Mac would also read
DOS formatted carts.

4726. Conner CFA170S in a STacy?

Newsgroup: comp.sys.atari.st
Date: 1999-09-22 00:00:00 UTC
From: steamer954@aol.com
Message-ID: <19990922010337.08387.00000016@ngol01.aol.com>
Source record: 73236

Hi

I am tring to install this (Conner CFA170S) larger hard drive in my STacy.

I have done the following:

1) Checked that the drive spins (the first drive that I bought would not even spin).

2) I have no jumpers on the front which according to the Segate web page should give me a SCSI ID of 0.

3) Tried to use CBHD502. it finds no devices

4) Tried using the Supra HD utilities no SCSI device found.

5) Tried usnig Dimond Edge, it can not find it either.

6) Tried using the STacy Hard Drive utilities supplied by Atari with the machine, "Fatel Error, Cannot continue".

I also noticed that the jumper for "TERMPWR Output Enable" is off, do I need to put it on?

What about the switches on the STacy's controller all 3 are "ON"?

Any help or suggestions would be appriciated.
If you need more info. let me know I will try and find it.

Thank you
Stephen (steve) Davis

I thought the STacy had an IDE internal drive. I have never owned one,
so it could just be a lost bit floating around my head. Find out
first, if it is scsi, does the STacy output termpower. If it doesn't,
then the drive will have to be configured to do this.

In any case, you need a null-modem cable. They can be purchased at
most computer stores, or easily home-built, using these schematics
from "The Hardware Book" (type this, with quotes, to get the list of
mirror sites, in Yahoo).

> Can anyone suggest cheap/good/reliable programs and/or connections?
> Are the cables (LAN, serial, modem) readily available?

STinG using BNET could be a good start, if you only want to share disks.

However, if you also need printer sharing, I would instead recommend
MiNT-Net, which allows this rather easily.

A good place to start, for MiNT info: http://yescrew.atari.org/

I have been using MenuInfo for a bit, and have suddenly encountered a
strange problem?!
Whhooa!! very weird! tell me what you think the problem is, please.
For no reason that I can see the time placeholders I was using to
display the time
in MenuInfo have been showing up as midnight. that is, 00:00:00. and it
will not
change! My system clock and time is correct, that hasn't changed.
Does anyone have any idea what might be causing this?
It is more of a puzzle than serious as I now use LEDpanel for the time,
and MenuInfo only for the memory left display.

4737. Where do I find the 74HC280 chip?

Date: 1999-09-23 00:00:00 UTC
From: steamer954@aol.com
Message-ID: <19990923174522.08836.00000411@ngol08.aol.com>
Source record: 73047

Hi and Thanks to all who helped so far in my attempt to fit a conner drive to my STacy.

I have solved the termination problem but as all but 4 models of Conner drives are parity enabled I need to mage the parity generator, but the required 74HC280 chip seems to be unavailable here in BC, Canada. Does anyone have any suggestions as to where I might find one?

Or does anyone know if a SN74LS280N (I have this one on a SCSI card for a PC, it is also 14 pin) will work?

thanks for your time

Would there be a slot on the board next to the DMA socket? I did
install some sort of internal adapter once but it was years ago.

Yes, we did this for the first four or five years with ST Applications.
What is going wrong?

Hey;

Mouser Electronics in Texas has the 74HC280 for 60 American cents. Best of all, they have no minimum order. I live in Ontario and have ordered lots of stuff from them and have always been very happy with their sevice and products. If your order comes to more than $CAN20, though, you'll get stung for GST and a $5 service charge courtesy of our friends in Ottawa. Check out their website:

www.mouser.com.

Good Luck

Ken,

What do you use? NEWSie? Maybe I haven't kept up with later versions, but I thought it to be a newsgroup reader, not an e-mail program. If NEWSie can accept file attachments, I've learned something new. Now Mart has multiple solutions to the problem! <g>

Gordy said:

>Is there a file viewer of converter on the Atari for managing *.PDF format files?

Yes there is (do I detect a non-Atari Computing reader?)

You can find English RSC files and docs on my web site, however the link to the binaries themselves is currently broken, basically because the programmer's web page is closing.

Hi,

i'm new on the atari-world an would like to get links to usefuel WEBsites, infos on must-have-tools/apps/games/demos maybe special for the falcon. Is there also some kind like "aminet" for the atari? How can i connect the falcon to other computers, it seems (i have no books to the machine) that the max. serialspeed is 19200? Is the printerport usefuel for some kind of Laplink transfer like the amiga have?

Bye, Andreas

4751. Does atari have ASCII problems

Newsgroup: comp.sys.atari.st

Does anyone know if atari has problems writing ascii files correctly.
I seem to see alot of wordsconnected like that last one I just typed.
If anyone has seen this before then this may be a big problem with
postscript printing or other things.

Gene

The only one is Ghostscript AFAIK. Haven't got a URL for it off the top of
my head, but try the UTSI or there has been a thread in here in the last
couple of days about it.

Attention all CAB drivers. I'm currently
trying to figure out a few problems, and while
I'll mention more as time goes on, this is the
largest one that seem to come up frenquently and
often and I wonder if there is a solution.

Amoungst browsing with CAB, I will get an
error stating:

Runtime error 163 at offset $0004C8E6

Which naturally crashes the system. Any
idea on this?

Fellow CAB driver,
Doctor Clu

4755. Multitask on atari? sure...

This is the output of ps on this falcon running MiNT.
You can count. Close to 100 processes running at the same time.
It is not to show off at all, but to stop some rumours created by certain people claiming/thinking/saying that MiNT sucks, is slow and has low compatibility.
I recall that MiNT kernel is free, and a good AES (naes so far seems to be the best) combined with a functional desktop (THING is a very good choice), this still remain a very non-expensive solution for those who want to multitask efficiently.

Great Thanks to Frank, Guido, Draco, Mario, Martin etc etc.

I have an ADI 17" monitor attached to my ADI Rage Pro card
and the only problem is that the monitor can not sync
at boot and the monitor is cold.

The driver is slower than the driver for ET6000
that i had before.

But it works very well i high res. like 1280 x 1024 16M colors.

As John says the only thing available is Ghostscript. There are two versions; one for basic ST, Falcon without FPU and one for TT and Falcon with FPU. Both available on Derryck's Cheshunt site or from me if you yell. You may have use an environment set up prog to tell GEMGS where to look for fonts etc.

It works, but slooooooooowww.

I don't know if this will help, but I have a MegaST4 with an external HD with n ICD Micro Host board mounted on the HD. This is prefered to the internal fitting, due to possible over heating and power supply overloading problems. As far as I know, there is a specific space, on the lower(near)left part of the ST's board for the board and a pin set for connecting the flat ribbon cable. If this sounds interesting, I'll undo my MegaST and HD and look further. I think you need a mounting bracket as well.

I have the mounting bracket, and two cables. One short DMA-ribbon cable,
one longer ribbon cable. I expect that I will have to fabricate a power
connector as one was not included in my package.

I am guessing that the DMA-Ribbon connector is only for use if I decide to
install an external drive?

For any one having similar problems with their monitor. Tracked down the problem to a badly connected video amplifier board, the one that plugs directly onto the CRT. Tried to remove it, but gave up (chickened out). Cut away most of sponge on back screen, pressing board onto CRT, so that board is now biased at an angle and pins all make contact. Now, at least for the present, it works first time from switch on.

Bob King.

4766. Help wanted...

Newsgroup: comp.sys.atari.st
Date: 1999-09-23 00:00:00 UTC
From: Robert Losch <rlosch@cybea.com>
Message-ID: <37EA2B7F.9E1F1FF7@cybea.com>
Source record: 73133
Cross-posted to: comp.sys.amiga.misc,comp.sys.amstrad.8bit,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.oric,comp.sys.sinclair,comp.sys.cbm,amiga.system,alt.amiga

Hi people,

Sorry for the cross-posting. I'm in the process of doing research for a book I intend to write on the "golden days (ZX81 ---> Falcon/A1200)" of home computers in Europe. I would like to make it a little different from the other books I've read on the subject so far which a) tend to focus on the U.S. and b) are most interested in the tech/business side of things. The tech will be treated, of course, but I'd like to focus on the people aspect (hw & sw designers, users), and the market differences across the different European countries - why, for example, did Oric do so well in France? Why was the Enterprise 64/128 a success in Hungary of all places, and so on.

I'm looking for the following:

- Technical documentation, brochures and advertisements, also of vaporware and prototypes
- Photos and screenshots
- Magazine articles (in English, French and German)
- Anecdotes and stories
- Contacts to people who ran user groups
- Contacts to people who worked for computer manufacturers and software companies
- Contacts to people who coded demos / cracked apps, etc...
- Info about machines that were limited to a single market (the Thomson, Matra and others in France, for example)
- Info about obscure and marginal machines

I also need more info on certain markets - Italy, Spain, Portugal, Scandinavia, Switzerland, Austria, and Eastern Europe.

As I said, I only recently got started on this, and it's still very much work-in-progress, and I really can't guarantee where it's going to go. As I go along, I'll probably set up a web site documenting the progress and which could also serve as a resource center for others who have similar interests. Think of it as an open source book :-) So if you have any info that I could use, or if you know somebody who could help, please let me know by e-mail.

Thanks,
Robert

suggestion:
-turn off ext. hard drive/s
-turn on Atari
-wait for desktop
-insert ICD floppy disk
-configure ICDboot.prg in A:\auto folder with Utility program(ICDutil?)
to check for all the SCSI id's for your hard drive/s
-save to A:\auto\icdboot.prg
-turn on Hard drive/s
-run ICD boot when hard drive/s 'warmed' up

should work.
may have to run ICDboot.prg first to configure ICDboot.prg with
ICDutil, and reboot.

good luck.bonne chance

Hallo Steve!

S>unless General Info does??

well, that one has a cache setting option, too.

S>But anyway, surely this would apply under the MagiC OS? But it doesn't,
S>as it's automatically enabled under this OS.

Not necessarily, as the order in which CPXs are executed may vary.

I just switched on the Falcon, and caches are on in TOS mode. There are several
CPXs that allow to set the cache state:

FALCONF.CPX, ID: FCNF (Version: 01.11)
GENERAL.CPX, ID: GEN_ (Version: 01.30, probably patched)
SI.CPX, ID: SI__ (Version: 01.00, add-on to NVDI)

Ahhh, is that why the newer demos are starting to have this option then?
I've got a few here.. So, this makes the 100hz vga mode as fast as the
rgb resolutions? Why I'm here - how come an rgb Falcon is faster anyway?

Do you have access to a copy of Partition Magic? If so, you can render
the risk minimal by creating a second primary partition and installing
onto that. Go for a unix config that boots off floppies (ie don't let
LILO loose) and you'd be a *very* unlucky person indeed to have the
original primary corrupted. Doing it this way is about as close as you
can get to having two separate hard disks, without having two separate
hard disks.

> directly, but from STOOP. Any ideas please.

I also boot from Stoop: no problemo.

Do you mean that you save magx.inf from the desktop ? You should
instead save from the "resolution selector".

Bye,
/Pascal/

> world of Mint ;-))

well, not so completely new!
MultiTOS should have come with your Falcon,
that uses GEM as the aes (gem.sys)
and MiNT to give you a multitasking OS.
Why not start there?
then progress to latest MiNT kernels,
MiNTnet(internet,...) etc
also you could try out Geneva as the aes, or
N.aes as the aes
(or even the freeware Oaesis, or Xaes)

> Let's start with some basic stuff: if I want to try multi-tasking, what
> size partition C should I be looking at ?

You are using ICD, right? (not the best now
btw, HDDriver is very good)
well, when booting you have the option to
boot up from different partitions!
Why not set up auto folders in you first 4
partitions, each say 50MB.
C:\ could be straight TOS
D:\ could be MultiTOS
E:\ could be Geneva (get the demo -
www.pair.com/gribnif)
F:\ could be Magic (demo??)
Desktops make a world of difference also
NeoDesk is good in TOS, Geneva
Thing is good in everyThing! :-)
and Jinnee is quite wild also.

> Finally; what about backups ?

for me? at _least_ 32MB!
although with the ability to choose which
partition to boot from under
ICD or HDDriver, it hardly matters! :-)

>

Thanks Kenneth for this info. :)

I checked my DEFAULT.CFG and DEF_RTT was set at 60. Changed this
to 500 and my uploading speed increased at least 4 times with
AFTP. ;)

Now is 500 the highest setting one can use for DEF_RTT?
Is it possible for me to get even faster uploading speed if I
set this number higher or lower?

And if you have a Atari thats upgraded with a Nemesis/CT2/AfterBurner
or other Accelerators, can one change some of the settings in STinG
to get faster downloading/uploading and etc, that one normally
couldn't get on a stock Atari?

The CT2B in my Falcon has really made a difference in modem to
computer speed and I would like to get the most out of it, so any
tips you or anyone else can pass along is most helpful to all of us
STinG users.

And any tips on getting the best preformance out of STinG on Stock
Ataris also would be a great help.
I do not fully understand some of these settings in the STinG
DEFAULT.CFG. It would be nice to have a text file describing what each
setting is for. This way one could play around abit and tune STinG for
the best performance on his/her system.

I know alot of you have been thru this before with setting up STinG.
But it wouldn't hurt to go over some of this again.

Thanks again for your help,
phantomm@kih.net

If you have never used anytype of Multi-Tasking software before. Then
I would recommend starting out with Geneva. It's extremely easy to
setup and the manual is excellent. As for the DeskTop NeoDesk has
added benefits if used with Geneva, but there are alot of others that
will work fine with Geneva as well.
I use Geneva/NeoDesk on my CenTurbo II v.B Falcon with a 6.4Gig 2.5
IDE drive. You won't go wrong with Geneva for starting out and you can
always try MINT or some other OS later on if you find that you need it.
Geneva has extremely good compatibility with software. There are
actually some software that I can't run in Falcon TOS that I can with
Geneva.

As for the Boot partition, I'm using a 200meg boot partition on my
Falcon. Which is enough room for me. It would be a waste of space
for anything larger on my setup. I don't think having a large
Boot partition of 500megs to 1gig is a good idea. Unless you really
need that much space.
When using a ICD Link II on a STe, I've always used around 100
to 150meg boot partition without any problems.

Just make sure you have good software for Defragmentation and etc
such as Diamond Edge or Zorg.

>
>Finally; what about backups ?

It's a good idea to backup your boot partition setup to a
CD or floppies just in case. I have most of my Boot partition
backed up on a SCSI partition.

Hey;

Mouser Electronics in Texas has the 74HC280 for 60 American cents. Best of all, they have no minimum order. I live in Ontario and have ordered lots of stuff from them and have always been very happy with their sevice and products. If your order comes to more than $CAN20, though, you'll get stung for GST and a $5 service charge courtesy of our friends in Ottawa. Check out their website:

4783. Atari users chat session Saturday night 8 pm CST!

Newsgroup: comp.sys.atari.st
Date: 1999-09-24 00:00:00 UTC
From: Doctor Clu <drclu@swbell.net>
Message-ID: <37EC2AF0.4D41@swbell.net>
Source record: 73000
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

Less than a day away, we are looking at having a chat session tomorrow (Saturday) at 8 pm central standard time. The chat session is a good way to kick back and hang out with other Atari enthusiasts.

Our chat room requires no special programs or even java script, but it accessable with CAB or any other browser. For CAB and earlier web browsers, you can reach the chat area at:

http://www.atariusers.com/cgi-bin/chat/chatform.html

For later web-browsers, you can jump right in at:

http://www.atariusers.com/chat

Also, if you are looking for other Atari information, check out or main website at:

http://www.atariusers.com/aunt

There you can find articles, meeting times (if you so happen to live in north texas) and we even have a message area for our friends outside of Dallas, Texas.

Look forward to seeing you at the chat tomorrow!

Greg Goodwin (aka "Doctor Clu")

I checked your page and clicked on the Ghostscript link. It took me to
Christian Felsch's page just fine. Clicking on his gemgs link took me to
a page that had no link for binaries, but had a lot of other good
Ghostscript information and a link to the Ghostscript home page (Unix,
Windows, DOS, etc). So I went back to Christian's home page and clicked
on Download instead of gemgs. This took me to the Technical University
at Harburg (Germany) archive page where the gemgs folder was at the top
of the directory. I opened that and was able to download the entire
archive. Then I went back to your home page and got the English docs/rsc
files. Thanks for the links Derryck. I really appreciate it. I've been
wondering for quite some time where I could get the current
distribution. I hear it's tough to install, so we'll see how it goes!

Thanks again,

John

From: Ben Hills <ben@imperial.co.uk>
Message-ID: <7sf6ddgpj1@nnrp1.deja.com>
Source record: 73061

Hi All,

I recently bought an Atari 520STFM from a Bric-a-brac type shop for ten pounds. The computer itself works alright, but the floppy drive doesn't. Although the drive makes all the right whirring and clunking noises it will not read any disks. On closer inspection I found that one of the Read/Write heads had actually broken off!

I have managed to get another 720k drive from an old Epson XT PC. The original drive from the ST was an Epson SMD-380. This replacement drive taken from the PC is an Epson SMD-300. Both are 720k drives and both look exactly the same, but I cannot persuade the replacement drive to work. The drive spins correctly, but nothing else happens.

So, this is a bit of a long shot, but does anybody know what the correct jumper settings should be on this SMD-300 drive, or does anybody use an SMD-300 drive in their ST?

Any help would be greatly appreciated.

Regards,

Ben Hills.

> Can't one just connect the relevant pin on the Centronics to the +5V
> supply - preferably via a diode to prevent 'feedback' if another
device
> on the bus also supplies termpower? But if so, which pin is it?

In my HiSoft-supplied cable the connections are as follows (looking at
the outside end of the connector, the uppermost row having more pins or
holes than the lower):

Joystick plug bottom left centre to 25 way bottom second from right
Joystick plug bottom right centre to 25 way bottom right via a small
component which might be a resistor, marked

IR
N400

You could make up this cable fairly easily. If you have a dead mouse
lying around you could use its cable complete with plug.

Almost any decent compiler building a project with more than one file will use "lazy" compilation, and check to see if the file has been modified since the last time it built it (assuming it still has the object file for that module). Incorrect date settings causing files to appear to have been created in the future confuse any of these "make" functions to build in-appropriate files, or more significantly, not build files when modifications have been made.

Agreed that many applications dont require date funtionality, but there are more than you would think at a first glance.

Anthony

Source record: 73065

I'm looking into buying a used Falcon030, but I don't have a great deal to spend.. (~$400CDN, quite possibly a little more...) What sort of system should I be able to get for that amount? (If you're not already aware of the low value of the Canadian dollar <g>, check out http://www.xe.net/ucc/ to convert that figure to your local currency.)

I figure I get more Falcon-per-dollar if I supply my own multisync S/VGA monitor--all I need is a system with an RGB->VGA adapter, correct? I'm sure there's a hitch somewhere. I've seen separate RGB and VGA versions of Falcon software. This suggests to me that the RGB->VGA adapter might not be a total solution...(especially for demos and such.) can anyone offer some advice?

What resolutions/bit-depths does the Falcon support without additional video hardware?

I know the Falcon was designed to accept 2 1/2" HDs, but I've heard a lot of people saying that you can cram 3 1/2" HDs in there. :) Truth or fiction?

Also, do those 2 1/2" IDE drives use a different sort of cable than standard 3 1/2" drives?

I've dabbled with Linux and managed to get a few apps/simple IP router going.. am I ready for MiNT or should I stick to MagiC? I'd be using the system for Internet access, some graphics apps, audio (tracked and digital) and, of course, the odd demo...

Can us multitasking power users still live in 4MB of RAM? :) I'm guessing no...

Lastly, who's got a good Falcon system for $400? <grin> I've been

Thanks!
Derek Warren [MegaSTe user with some STs for sale, cheap..]

>supported and developed. Hooray for SoundPool!!!

I'm just curious, does CDRecorder work with ExtenDOS Gold, or do you have to use another driver? I'm very happy with ExtenDOS Gold, and am about ready to get a CDRW drive to use with my Falcon / CAF.

I _was_ going to get Anodyne Software's CD Writer, but reading these posts about CDRecorder has made me reconsider my decision.

I don't really want to use another CD ROM driver though, so if it works with ExtenDOS Gold, looks like I'll have to get CDRecorder.

Greetings all,

I wonder if any of you have got information on the colour icon file (*
.CIC) created by Ataris resource editor? How does it handle bitplanes,
mask and stuff?

Thanks in advance! :)

Regards,

Joakim

Peter,

I figure it is most likely as you say. When I have time to un-box it and see what I can find. I was just offered a Syquest EZflyer 230 for free from a friend along with many cartridges so I am in luck there. Now, to chase down some way to get some very important stuff of of a number of 44's that I have. Thanks for the reply.

Greetings Folks,

I uploaded a few files to a FTP site recently and noticed that
it was much to slow than it should be.

Using STinG v.1.20 and latest version of AFTP, on CT2B Falcon.
Dowloading is fairly fast.

I remember awhile back that some other folks also had this problem
and it had something to do with the settings in STinG.

I'd appreciated any help or suggestions on how to increase the
Uploading speed.

Future Thanks,
phantomm@kih.net

Hi Doctor Clu,

I'm using CAB 2.7c (commercial), and I STILL get that once in awhile. I have no idea what causes it. It seems that the more browsing I do in a session, the more likely it occurs. Sorry I'm no help, except in knowing you are not alone in the problem. I'm using 14meg Falcon, Nemesis, TOS 4.04, Warp-9. My error number is the same, altho I have it listed as $0004CA3D2 in one of my notes.

In DEFAULT.CFG change

DEF_RTT = 50

to

DEF_RTT = 500

Or if you have the "STinG Protocols" cpx installed open the TCP section
and set Initial RTT to 0.500 sec. as an alternative. Note that this
setting with only take effect if the cpx is installed and will override
the DEFAULT.CFG value.

You need to set the drive number to 0 instead of 1. Check the jumper
settings on the original ST drive, they should be similar.

> aware of the low value of the Canadian dollar <g>, check out
> http://www.xe.net/ucc/ to convert that figure to your local currency.)

Well, to convert to a currency that I know, that's 1600FF. Second hand
Falcons here range from 1500 to 3000 depending on software and specs.
For that money, you could expect to get a machine with 14Mb, a small HD,
but not much software.

> I figure I get more Falcon-per-dollar if I supply my own multisync
> S/VGA monitor--all I need is a system with an RGB->VGA adapter,
> correct? I'm sure there's a hitch somewhere. I've seen separate RGB and
> VGA versions of Falcon software. This suggests to me that the RGB->VGA
> adapter might not be a total solution...(especially for demos and
> such.) can anyone offer some advice?

Well the same old Atari monitor dilemma we had with the ST. Actually the
only things that are a bit fussy about screens are demos. If you
absolutely need to be able to run demos, then yes, you'll need an RGB.
For anything else, a VGA offers better resolutions. Be aware that with a
Falcon, speed depends a lot on resolution. The machine will be much
faster if you run it on a good old SM124.

> What resolutions/bit-depths does the Falcon support without additional
> video hardware ?

You don't really need extra hardware. With a program like Videl Inside
or Videlity you can run extended video modes at the sole expense of a
bit of CPU speed. My Falcon successfully runs at 800x600 in 256 colours,
but I usually run it at 768x576, which is a better compromise
speed-wise.

> I know the Falcon was designed to accept 2 1/2" HDs, but I've heard a
> lot of people saying that you can cram 3 1/2" HDs in there. :) Truth
> or fiction?

Truth. 3.5" drives are cheaper. You usually need a 2.5" to 3.5" cable
adapter, a new bracket, and some cutting up of the shielding. Otherwise,
any old laptop IDE drive will do. DOn't forget that with Ataris, unless
you do D2D audio, you don't need that much disk space. For me, a 500Mb
drive would be more than enough.

> Also, do those 2 1/2" IDE drives use a different sort of cable than
> standard 3 1/2" drives?

Yep. The connector is smaller and includes the power pins, but the
pinouts are basically the same. You need an adapter.

> I've dabbled with Linux and managed to get a few apps/simple IP router
> going.. am I ready for MiNT or should I stick to MagiC? I'd be using
> the system for Internet access, some graphics apps, audio (tracked and
> digital) and, of course, the odd demo...

As I said above, very few demos use a VGA, and won't like either MinT or
MagiC. Audio doesn't really like multitasking either. For the rest, MiNT
or MagiC will both do. It depends on what kind of user you are, but if
you're more of a Unix-head then I'd say go for MiNT. If you prefer the
MacOS-no-trouble philosophy, then MagiC's for you.

> Can us multitasking power users still live in 4MB of RAM? :) I'm
> guessing no...

On an ST it was possible, but not really practical on a Falcon.

> Lastly, who's got a good Falcon system for $400? <grin> I've been

Not me, I'm keeping mine!!!

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

I've added more and will be adding more Hardware, Software, Books and Accessories for Classic 8 Bit and Atari ST. So checkout what's new on my WebSite. InFact check it regularly as my Catalogs are updated regularly. I have 6 different Catalogs, and my SoftWare Catalogs are my largest. They have the biggest Byte Count. And remember if you can't come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to meet with other Atarians. Read the Ad near the bottom of this message.

Click for WebSite!

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. We meet the 2nd Tuesday of each Month. Our Next meeting will be Tuesday, October 12th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. Get together with other Atarians. Make friends, meet new people, maybe find an old friend. Eat Pizza, drink Pop & Beer in a decorative atmosphere. Bring your family to a family friendly place. For more info try:

4807. Gemulator + NVDI + Geneva in VGA Resolution

Newsgroup: comp.sys.atari.st
Date: 1999-09-24 00:00:00 UTC
From: koneno@my-deja.com
Message-ID: <7sg4jc$6qd$1@nnrp1.deja.com>
Source record: 73077

Hi All,

I have a problem. I've been trying to boot my Gemulator 98 with the following configuration:

1. Gemulator has a utility that enables you to use high VGA resolutions and and to choose any of the ST's monitor modes (color or mono). Both of the modes work fine with that utility

2. I have a NVDI 3.1 Gem accelerator, which also works fine with any VGA resolution within color or mono modes.

3. But when I add Geneva to this combination I can only get VGA high resolutions in mono mode. Color modes only work without increasing the VGA size.

It seems like the VGA utility is not the problem but Geneva (point 2)

Any ideas?

Thanks

Sorry if this has come up a million times but:

I have a question on a similar vane. I have an STFM (4 MB, TOS 2.06
fitted but use MagiC_6 and with No processor accelarator fitted)and I
also use STinG 1.20 and CAB 2.7 for Internet access. Also use HSModem7
software with an Xlink 56k external modem.

Recently I have fitted the RSVE board but haven't really noticed a _major_
increase in general internet access speeds.I have my serial baud speed set
at 38400/8bits/no parity/1 stop bits/RTS-CTS/ with buffer sizes at =
send:1500 receive:1500.
I understand that I am limited with the 8MZ processor in terms of speed but
I would like to know how to get the best from this board.

I will try you're suggested setting for STinG DEF_RTT,but what other main
settings,if any,help accelarate the speed of transfer rate with STinG as I
have also tried Iconnect with it's basic settings and have noticed that at
the same time and with the same URL page the download speed on my computer
is around 2500-3000 bytes a sec with IC and with STinG is averaging around
1000-1500 bytes per sec. Now reading other users comments on STinG/Iconnect
merits I guess it must be a setting issue so I would be greatfull for futher
advice on this.

Regards
Sean

Location: M.Keynes, Buckingshire, England(UK) Email: s.barbieri@ukf.net

Firstly, thanks to all those that replied to my previous question ([Programming]: Reading PI1 files). I would reply to that thread, but Outlook Express has other ideas! Anyway, the code is now working (bar bugs caused by me!)

The next question I'd like to ask is: Are there any famous degas(PI1, not the artist!) pictures? Like any standard image that was used to advertise the package? I mean something similar to that clowns face that was used with a few packages...

If you have any of these images (in PI* only!), please could you send them to me!

Cheers,
Simon Hazelgrove.

->such.) can anyone offer some advice?

<snip> Nick answered most of your questions with his usual efficiency
and thoroughness, so the only thing I wanted to add is that with the
Falcons "dual" video VGA/RGB modes, I heartily recommend that you get
a good multisynch monitor that will synch down to ST video levels. I
got my 17" Electrohome GMP1701 from Software Hut (an Amiga dealer,
because the A1200 has the same video needs/problems as the Falcon)
for $679.00. That is a high price, but that was about 2 years ago. I
am guessing that they would be cheaper now. At that time, they also
had a 14" model with built-in speakers for around $369.00. The key
thing is, that using *one* monitor, I can run up to 1280 x 1200 res,
(I use 800 x 592 x 256 colors right now) in VGA, and still run ST
games and Falcon demos that use RGB...

Catch ya later!

PS You'll love the Falcon-its a great machine! ;-)

works with
> ExtenDOS Gold, looks like I'll have to get CDRecorder.

The driver software is only necessary to make the Falcon able to _read_
the CD's. CDRecorder doesn't need ANY driver to be able to burn CD's -
but if you don't already have a driver, a version of Metados is
included. The only thing you have to think of is to enable the bus
arbitration - but again, there's a program included with CDRecorder that
does this... :)

Actually, I got a bit mixed up then.. My TT has that option, but on the
Falcon this cpx doesn't have anything to alter the cache on/off

> I just switched on the Falcon, and caches are on in TOS mode. There are
> several CPXs that allow to set the cache state:

my second hand Falcon cost a little than that
about 3 years ago, so you're not
out of line, IF you can find one! :-)

> I figure I get more Falcon-per-dollar if I supply my own multisync

99% of my time is spent in VGA. I _only_ use
RGB for demos.

> What resolutions/bit-depths does the Falcon support without additional
> video hardware?

15-16 bit (32K - 65K)

> standard 3 1/2" drives?

true to the 3.5", but I've only used 2.5"
and the cables are _very_ difficult to get.
3/5" IDE cables won't work,
if you can't find any, I can get you one for
cost (10$Cdn)
My Falcon came with an IDE cable, yours
probably will also.

> I've dabbled with Linux and managed to get a few apps/simple IP router

> digital) and, of course, the odd demo...

MiNT is a lot easier to set and run than
Linux, it's more modular

as functions are not compiled into the
kernel, but loadable as you need
them. It is a sort of bridge between TOS and
Unix.

> Can us multitasking power users still live in 4MB of RAM? :) I'm
> guessing no...

Magic is better than MiNT here, but MiNT
still works, just slower.

4823. CT2 & Cubase Audio

Newsgroup: comp.sys.atari.st
Date: 1999-09-24 00:00:00 UTC
From: bjr@localink4.com
Message-ID: <rung0515lg786@corp.supernews.com>
Source record: 73093

Greetings,

My setup is CT2, 32mbTT, 14mbST, NO IDE Drive(s).
NVDI 5

In turbo modes, I get loads and loads of SCSI errors with Cubase Audio Falcon. Yes, I did install the patched MROS, also tried the unpatched version.

Also in Normal Mode, if using Cecile I get these errors, thoe not as often.

In Normal mode with HD-Driver, CAF works perfectly, I can thrash the hard disk for hours on end, with large fragmented multi track work sessions and experience no problems.

CC_Tools reports no transfer errors...ran tests in Normal and both TOS Turbo modes.

All other software I have (except booting MajiC 6) works fine thus far, in NORMAL and TURBO modes.

All tests suggested by the CT2 docs have been run, and passed.

All CT2 software and patches have been updated to the LATEST versions found on www.centek.fr.

The most common and EXACT behavior of CAF in turbo mode is this.

Upon hitting play with one or more audio tracks on the arrangement, the SCSI bus seems to lock, HD LED stays lit, and I get either a SCSI 2, 4, or Check id and termination message.

Upon hitting enter or return a few times, the arrangement begins to play, after a few seconds, the SCSI bus seems to lock again...same message(s).

Sometimes it does manage to start playing with no fuss, and play all the way thru the arrangement, but, when I hit (stop), I get the SCSI lock up and error again.

Of course, after each SCSI error, CAF seems to reset the SCSI bus or something, as everything on the SCSI array suddenly blinks and does their whirls (like at boot time).

I've double checked my SCSI array for ID conflicts and termination. I do use a termination block that came with an old Syquest EZ125 drive. Might that be a problem? As I said, all works well in normal modes with HD Driver...Cecile as well (except the mentioned CAF

problem in normal and turbo modes).

I'm simply at a loss for what to try...
Any tips?

Oh, BTW, I have contacted Centek...
I'm sure they'll get back ASAP, but my message is in English, so I expect it may take a while for a response from them.

Thanks,
Brian

yep autostart jumper is on(I have been on the site ffom ibm), i'm sorry I didn't told you every thing.
btw if your looking for the info look over here :
http://www.storage.ibm.com/techsup/hddtech/0663e/0663ejum.htm
anyway if I start up with(from disk), in my auto folder, hddriver (7.73 demo version) it sees the harddisk (ibm oem 0663e12, direct acces) but when I tried to install the driver (shdriver.sys) onto the harddisk it doesn't recognize the harddisk , if I want to use bigdos I need a patch (binpatch.ttp), it says in the txt file, because shdriver.sys can not go beyond 1 gb.
But the strange thing is (yes I have a pc, it's been a while before I rediscoverd my atari) if I use fdisk on my pc and make two partitions on my atari it shows two icon harddisk when I select 'install devices' but still can not acces my harddisk. what is SCSI initiator???
Which HDUtils do I have to use (HDX.prg, if I try to format the hd , the scsi 0 through 7 are not responding.) but with hddrutil.ttp (from hddriver 7.73) if I scan the scsi bus it recognize it but can not install hddriver onto the hd it says it needs hddriver.sys (wich I don't have and can not find, anyone knows were I can find this).
Thanx for the reaction

Norbert

4826. Falcon030 Networking

Newsgroup: comp.sys.atari.st
Date: 1999-09-25 00:00:00 UTC
From: Matt DeJonge <mattdejonge@home.com>
Message-ID: <HaWG3.170$d23.5335@ha1>

Hello, all. It is time to take my Falcon out of the closet! I haven't touched it in about three years, but the hunger has arisen. :) My question:

I have two PCs on a 10MB 10-Base-T network running at my house. I'd like to get my Falcon030 4MB/65MB/4.04 to participate too. What type of hardware do I need? I am quite Atari-literate (coded for 6 years in MWC and GFA), but I have lost track of what hardware (if any) is available to convert from the AppleTalk type port to a RJ-45. Should I run under GEM/AES? I'd like to run NetBSD 1.4.1 or Linux, though, if the hardware will be supported....

Thanks in advance.

- Matt

Have a look at Saka's homepage for an overview of the possibilities:

http://gallery.uunet.be/saka/

> I have lost track of what hardware (if any) is available to convert
> from the AppleTalk type port to a RJ-45.

Currently, none, because none of the manufacturers of LAN-to-Ethernet
converters agree to releasing any programing infos to allow someone to
write Atari drivers.

> Should I run under GEM/AES?

If you still enjoy any of your Atari software yes.

> I'd like to run NetBSD 1.4.1 or Linux,

Entirely possible, though a bit slow.

hmm.. appletalk to RJ-45... don't think something like that is available
for the atari F030.

Hope this will help you...

4829. Cubase Atari - Mixer Maps

Newsgroup: comp.sys.atari.st
Date: 1999-09-25 00:00:00 UTC
From: Trevor@stainsby.demon.co.uk
Message-ID: <37eca38f.5203512@news.demon.co.uk>
Source record: 73012

Hi,

Does anyone know where I can find find Mixer Maps for Cubase - I'm specifically looking for a General Midi map that would allow me to control effects etc. on my P.C. soundcard.

BTW I have returned to my truty Atari ST after wasting a lot of time struggling with Windows and the P.C.

Good to be back

Trevor

You forgot the most important one for the TT: NetBSD. Very stable, and
looks pretty cool on a 19" monitor. Among other things, I use hylafax
on the TT as my fax machine.

Digiweb seem to have changed that to
http://www.digiweb.com/kiffer/ATW/ST-VGA.html .
The most reliable address would be
http://purl.org/net/ATW/ST-VGA.html .

I just transferred my MegaST back from a Lighthouse tower back to its original box and you know what? It doesn't work any more. :[Preliminary tests indicate the power supply may be dead: did I maybe connect that floppy drive upside-down the first time? 8-0 Anyway, anyone who thinks they may be able to fix it, or can use it in any way, is welcome to come to Antwerp or Leuven and pick it up. 4MB, with an AdSpeed 16MHz 68000, TOS 2.06, an ATIN HD floppy adaptor (but only the original DD drive), and the much sought-after ;> Titan Reflex graphics card.

While I'm at it, the Lighthouse tower might as well go, including its "multiboard" gizmo. Plus there's an XD(!) floppy conversion kit which I never installed ...

Anyone interested should email me at <chris@kiffer.eunet.be> -- I may miss replies on this newsgroup.

That may (or may not) depend on the source and target formats. The
conversion, should it need applying, is simple provided you are
dealing with whole word and longwords. (ie if you want a real headache
try and deal with 12 bit FAT's as used by floppies).

16 bit word: exchange hi and lo bytes (eg $1234 -> $3412). Job done.

32 bit longword: exchange ho and lo words, then do word conversion on
each word (eg $12345678 -> $78563412).

To clarify:
$1234 5678
$5678 1234 <- word exchange
$7856 3412 <- byte exchange on each word.

>Or is it anything to do with something not being aligned on a word boundary
>(erk - faint memories of atari programming!)
>
>Please let me know if you can help!

From "picfmt.doc" on (iirc) umich...
<<PICFMT.DOC>>...

<DEGAS> *.PI1 (low resolution)
*.PI2 (medium resolution)
*.PI3 (high resolution)

```
1 word resolution (0 = low res, 1 = medium res, 2 = high res)
Other bits may be used in the future; use a simple bit
test rather than checking for specific word values.
16 words palette
16000 words picture data (screen memory)
-----------
32034 bytes total

<DEGAS Elite> *.PI1 (low resolution)
*.PI2 (medium resolution)
*.PI3 (high resolution)

1 word resolution (0 = low res, 1 = medium res, 2 = high res)
Other bits may be used in the future; use a simple bit
test rather than checking for specific word values.
16 words palette
16000 words picture data (screen memory)
4 words left color animtion limit table (starting color
numbers)
4 words right color animation limit table (ending color
numbers)
4 words animation channel direction flag (0 = left, 1 = off, 2
= right)
4 words 128 - animation channel delay in 1/60's of a second.
[0 - 128]
(I.e., subtract word from 128 to get 1/60th's of a
second.)
-----------
32066 bytes total

<DEGAS Elite (Compressed)> *.PC1 (low resolution)
*.PC2 (medium resolution)
*.PC3 (high resolution)

1 word resolution (same as Degas, but high order bit is set;
i.e., hex 8000 = low res, hex 8001 = medium res,
hex 8002 = high res). Other bits may be used in the
future; use a simple bit test rather than checking
for specific word values.
16 words palette
< 32000 bytes control/data bytes
4 words left color animation limit table (starting color
numbers)
4 words right color animation limit table (ending color
numbers)
4 words animation channel direction flag [0 = left, 1 = off, 2
= right]
4 words 128 - animation channel delay in 1/60's of a second.
[0 - 128]
(I.e., subtract word from 128 to get 1/60th's of a
second.)
-----------
```

< 32066 bytes total

Compression Scheme:

PackBits compression is used (see below). Each scan line is
compressed
separately; i.e., all data for a given scan line appears before any
data
for the next scan line. The scan lines are specified from top to
bottom
(i.e., 0 is first). For each scan line, all the data for a given bit
plane
appears before any data for the next higher order bit plane. Note
that this
is identical to the IFF 'BODY' image data.
To clarify: The first data in the file will be the data for the
lowest
order bit plane of scan line zero, followed by the data for the next
higher
order bit plane of scan line zero, etc., until all bit planes have
been
specified for scan line zero. The next data in the file will be the
data
for the lowest order bit plane of scan line one, followed by the data
for
the next higher order bit plane of scan line one, etc., until all bit
planes
have been specified for all scan lines.

Caveats:

DEGAS Elite's picture loading routine places some restrictions on
compressed DEGAS files:

o Elite uses a 40-byte buffer to store data being
decompressed.

o Whenever a control command is encountered, bytes are stuffed
in this buffer.

o The buffer is only emptied when there are EXACTLY 40
characters in it.

The important conclusion here is that

No control command may cause the buffer to have more than 40
bytes in it. In other words, all control commands must end on
or before the 40-byte boundary.

Any picture violating the last condition will cause Elite to get a bus
error when the picture is loaded.

...<</PICFMT.DOC>>

>Cheers,
>Simon.
>

eek! Basic! run away - run away! :-)

Looks something like you're drawing directly on a canvas above (I
dunno any VB btw). Have you considered a direct file conversion? I had
a quick peek at the Win95 programmer's docs. A direct conversion
doesn't seem wholly impossible. These datatypes are worth perusing...

Hallo Steve!

S>My TT has that option, but on the Falcon this cpx doesn't have anything
S>to alter the cache on/off

That's why I wrote "patched". The General.cpx checks which machine it is
running on, and normaly doesn't display the cache setting unless it's a TT.

IIRC, there was one byte to be altered, but don't ask me which one. That was
back in '94 or the like...

4850. ST games wanted...

Newsgroup: comp.sys.atari.st
Date: 1999-09-25 00:00:00 UTC
From: Prince Corum <corum@sasquatch.com>
Message-ID: <7sjuimqgq1@news.sasquatch.com>
Source record: 73033

I will be moving soon, so please send any responses to eldren@juno.com
instead of this account as I will be closing it in 1 week.

I am looking for the following games if they will run on my bone stock
1040STfm (1MB RAM and TOS 1.00):

Space Quest (any)
Zork (any)
Typhoon Thompson/Search for the Sea Child
King's Quest (any)
Leisure Suit Larry (any[sp?])

Also, is there a version of Deluxe Music Construction Set or any other
visual composer that will work with my ST and a Tweety Board? If not, then
I'll probably get rid of it (the Tweety Board, not my faithful 1040).

Anyhow, as I said, please send any responses to eldren@juno.com and we can
work something out.

Thanks!
Louis

Hi everybody,

I think that it is possible to have several minix partitions but HOW?

I already have a minix partition on a ZIP-cartridge where all my unified system is (/bin, /etc, /usr, etc). That was a silly idea because my ZIP became an un-removable media... Just the contrary of its purpose.

So I decided to make a new minix partition on a 1.2 Gb IDE harddisc I just retreived in the corpse of my dead Falcon. I partitionned it in 3: 510 Mb RAW, 510 Mb RAW and 201.6 Mb BGM. I wanted to change the two 510 Mb partitions into minix partitions.

Under BASH I typed:

```
minit -V -n 2 -P K:

minit -V -n 2 -P L:
```

Minit reported no error except that it complained for the unnecessary options. After that, both partitions K: and L: became unreachable either under BASH or from Jinnee.

Here is what fsinfo reports:

```
files links path_max name_max atomic trunc case file
75 1 128 12 0 8+3 no K:

files links path_max name_max atomic trunc case file
75 1 128 12 0 8+3 no L:
```

Just as if both were plain TOS partitions... and fsck says that K: and L: are "Not recognized MinixFS partitions or MinixFS not running" and later "Bad Superblock: Invalid Magic Number".

I also used minit to re-write the superblock (option -S). It worked without error but made no effect. I tried to partition with SCSITools and HDDriver but it made no difference. I tried to re-boot after partitionning and after "minit-ing" but the problem remained unsolved.

While typing, I got an idea: Are all my problems due to the fact that it is an IDE harddisc?

If not, what did I forgot to do? Please... Help me... I'm ready to drop MiNT and to buy a Wintel crapbox... ;-)

Important informations: Hades 060, MiNT 1.15.2b, Minit 0.31, Minix.XFS 0.71.

You can always get a composite video cable for the Falcon to watch
demos and play games on your TV. You could also just get the RGB
adapter and use your ST monitor on the Falcon for those "special"
times. I didn't follow the thread, hope I didn't duplicate any post.

No backward, just ST-LOW resolution. BTW it doesn't "see" partitions
higher than E.

Then, obviously, some other app is trying to override the baudrate
you have set in SERIAL.CPX and STinG. Your old MODEM.CPX wouldn't
be still enabled, would it? Also, check DEFAULT.CFG and DIAL.SCR,
in STinG's configurations.

Hi!

Here is a small message to inform you about the latest additions to my site:

First of all I am happy to announce that for some time now the site is (partly) also available in French language. Big thanks to Sylvain Perchaud who is doing a great job here and who is also adding some French specific news! Jump to the French pages directly via

- http://place2be.de/indexf.htm

Then I just started a new Reviewed! section. From now onwards I hope to review some interesting bits of software there. Starting off with an exclusive review of the upcoming Luna version.

And finally you can take a tour through a bit of 'what could have been' Falcon gaming history. Mc Fly of Risk alias Bleick Bleicken worked at Eclipse and did some of the graphics for their game projects (e.g. Iron Soldier). He also spent some time to paint the complete graphics for a Sierra style Falcon adventure which was canceled in favour of other projects. This unreleased artwork (and some others as well) is now featured in the Mc Fly of Risk Scene Special. Mc Fly also offers everyone who would like to give the gfx a bit of interactivity to get in touch with him.

http://place2be.de/ (German)
http://place2be.de/indexe.htm (English)

Hi Tracy,

Can't seem to reply directly to your e-mail, keeps bouncing back to
me, but here's the info.

You need a double density disk 720K (DD), not a HD 1.44 Mb.
Format on the PC under DOS:-

format a: /f:720

and you should be able to read the disk on both the PC and ST and so
be able to transfer files back and fore.

If you need any further info.... feel free...

Trevor

Check out the tons of things available from FTP sites.

> Is there also some kind like "aminet" for the atari?

There are plenty of FTP servers around, but unlike aminet, they are all
different. The main ones are:
ftp://ftp.lip6.fr
ftp://chapelie.rma.ac.be
ftp://ftp.funet.fi
ftp://ftp.uni-paderborn.de

> How can i connect the
> falcon to other computers, it seems (i have no books to the machine) that
> the max. serialspeed is 19200?

115kbps on the Modem 2 and LAN ports. Check out the Quick FAQ for
details:

http://bales.online.fr/atari

> Is the printerport usefuel for some kind of
> Laplink transfer like the amiga have?

Yes, but the port is not standard, so you need to build a special cable
and use special software. This is also in the Quick FAQ.

I used to use an STE with HD drive, serial mod etc... This is now my back-up machine just in case the unthinkable happens:)

When I moved over to the MSTE the only thing I've done was to adjust and change the port settings!!! I will rebuild the entire software/hard drive as soon as I can, maybe there's a rogue program that's responsible.

I did encounter a small problem on my tower STE using certain programs, like Harlekin II with the higher port speed (28,800 my speed). They caused bad and unreliable transmissions, so these programs are not active/running on the MSTE.

Hi

Not forgetting that it is possible to format a disk that IS usable on you ST, and what's more to can take advantage of extended formatting. I use DC Format 3, but there are other programs that can do the MS-DOS biz.

There is also other ways to transfer data between PC and ST: there's Ghost link in DOS, or using a communications program from Windoze. Both of these require a null modem cable and aren't exactly fast, but ok for small files or larger files if you don't want to keep changing disks.

4861. Problems connecting to the internet

Newsgroup: comp.sys.atari.st
Date: 1999-09-27 00:00:00 UTC
From: CWesterh@_remove_this_casema.net
Message-ID: <37ef2e82.5569249@news.nl.net>
Source record: 72899

I changed my internet connection from TT to PC about a year ago, because the modem of the PC was faster. When I tried to work with the TT again a few weeks later, Sting refused to connect. Because it was not very important, I left it at that. But a friend of mine with a Mega ST wants to go on the internet, so I got on it again. After a lot of trouble I found out that there was a problem with the serial CPX. Proberly this had to do that I changed from ZControl to Freedom2.

On the TT I can now connect with Sting, but when I trie this with the Mega ST I get four bombs. What could be the problem, and what could I do about it?

Secondly, on the TT I can browse with Cab and send e-mails with Newsie. But when I want to receive e-mail Newsie crashes. In Magic I get error -69 and in Tos I get two bombs if I remember well. Also ftp and receiving newsgroups does not work. In the past there was no problem, anybody an idea what is happening, and what to do?

Thanks in advance,

Cecil Westerhoff.

4862. IDE HD in Falcon030?

Hi!

I tried to change my 125 MB internal harddisk in my Falcon030 to
a 2.1 GB 2.5" Toshiba IDE disk. However, AHDI doesn't seem to
recognize this correctly and can only allocate 50 MB! AHDI
formats the disk fine, but when I try to partition the disk, it
just says that "boot information corrupted".

Is 2100 MB too much for the internal IDE controller?

Stefan

Then do not ask for this here. MagicPC is not that expensive, so just
buy it. Strange how people can complain about not being software they
like, after they do not buy but steal.

Cecil.

No!
You must have different IDE driver (HDDRIVER).

You should - NOT - format IDE hard drives..
Create some partitions is engough!

Looks like this drive lost manufacture track on disc.
Try HDDriver, but i think this drive is death.

You can use a 10Gig device, the -partition size- is the point.
TOS 4.x -> 1Gig per partition!

Regards, Robert

- Magic Sac 1 - Macintosh Emulator Cartridge (with manuals, but NO ROMS)
- Magic Sac 1+ - Macintosh Emulator Cartridge (with manuals and ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore

units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari (with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)

- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD Unit
- A working Vectrex controller
- A working DSS Satellite Receiver
- Working DSS H or J Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

Excellent! :-)

btw Patrice, I've just got your Doom v0.80 (RGB Falcon's) and it's amazing. Is this still being developed? Hope so, as it's the fastest Doom for my Falcon.

4872. File transfer from Atari ST to PC

Newsgroup: comp.sys.atari.st
Date: 1999-09-27 00:00:00 UTC
From: Frank Thomsen <thomfunk@get2net.dk>
Message-ID: <5jPH3.389$W43.615@news.get2net.dk>
Source record: 72910

Hello there.

I used to have an Atari 1040 ST E for making MIDI music. Later I got a PC and sold the good old and trusty Atari. Unfortunately I forgot to transfer my old MIDI-files on to the PC and now I have this load of old Atari disks that my PC refuses to read. Is it possible to do something about that? It would shure make me very happy.

Greetings for all of you.

Frank

I think if you run GEMULATOR, the Atari ST emulator, it will let you
read Atari disks in your PC. You can then simply copy them over to a
partition of your PC.

4874. REQ: Sequencer One?

Could someone correct me if I have this wrong:

Anodyne CDWriter Plus with ExtenDOS Gold
Consists of CDWriter Audio and CDBackup and allows the Atari to write
to CD-R(W) media. It can Write audio and data CDs and it also allows
Re-Writing on RW media.
Reviews: Atari Computing 12 & 13

SoundPools CD-Recorder
Doesn't need any driver to Write to CDs but needs either ExtenDOS or Spin
to Read them. Supports ISO9660 and Red Book formats (?)
Doesn't support Re-Writing of RW media.
Reviews: Atari Computing 9

Do these products work with both SCSI and IDE CD drives?

Peter

That's fair enough.

> Second reason is that VGA modes are driven at 60 Hertz while RGB modes are
> driven at a PAL video friendly 50 Hertz.

Hmmm, so how come a Pal PSX is slower than a NTSC PSX ?
Afterall, the cpu, bus, custom chips, etc.. are all the same. It's just
the output rate (plus less virtical lines) that's different..

> All this means there is less clogging of the Falcon data bus with video
> data, as video and program data are resident in the same RAM and grabbed
> on the same data bus. Thats why high-res, high-colour modes make a standard
> Falcon feel slower...because it is in those modes...

Hmmm (again!), so when I'm presented with the various screen frequency
options in the DHS demos I should really choose 50hz then? I normally
select (rgb) 60hz as this gives a bigger screen and (I thought) faster
display??
Here's one for you(!) - Blood Money had the 50/60hz option in it. I used
to select 60hz back then and got a faster and bigger display. Why should
the Falcon be different then?
:-)

> Graphics Cards and bus/CPU accelerators give more bandwidth for data transfer

In order to keep this simpler I've linked to the Ghostscript directory on the ftp site 193.190.20.128

>archive. Then I went back to your home page and got the English docs/rsc files.
>Thanks for the links Derryck. I really appreciate it.

We should also thank Peter West of the TransAction team who did most of the translation work for this.

> distribution. I hear it's tough to install, so we'll see how it goes!

It's not nearly as difficult as the versions distributed before Christian took it on, but the fontmapper file will repay close inspection if you want to change or add fonts.

The only problem I've ever had printing from STFax with NVDI was cured by setting the NVDI printer CPX to print in the foreground (NVDI5/MagiC6).

Otherwise look out for STARFAX, part of a suite of comms progs that is available for download from the web.

4890. Print from FAX program?

Newsgroup: comp.sys.atari.st
Date: 1999-09-27 00:00:00 UTC
From: Jim DeClercq <jimd1@primenet.com>
Message-ID: <7smij9adu1@nnrp02.primenet.com>
Source record: 73041

Help?

I have the last and greatest version of ST FAX, and a recent version of
NVDI. NVDI prints from CAB, so it is OK. But even setting that program
to run its tsr after NVDI loads does not work. It cannot find the
installed printer, and goes into an eternal hang.

I need either advice on how to make ST FAX print, using NVDI, or
what other fax program to use, and were it can be found.

Can anyone help?

Source record: 72927

Hi there,

Steve wrote:
> rgb resolutions? Why I'm here - how come an rgb Falcon is faster anyway?

Several reasons...

To start with RGB resolutions are normally lower than VGA resolutions. eg
640x400 is highest (without overscan) while 640x480 is highest on a VGA
screen. This is 'standard' Falcon video modes I'm talking about...

Second reason is that VGA modes are driven at 60 Hertz while RGB modes are
driven at a PAL video friendly 50 Hertz.

All this means there is less clogging of the Falcon data bus with video
data, as video and program data are resident in the same RAM and grabbed
on the same data bus. Thats why high-res, high-colour modes make a standard
Falcon feel slower...because it is in those modes...

Graphics Cards and bus/CPU accelerators give more bandwidth for data transfer
hence less lag on the system...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

This is a DSP version, and is incomplete (lack of monster IA), has many
bugs. I do not develop it any more (even bugs will remain). I work now
on the complete engines.

Planned work in pm[doom,heretic,hexen]:
- DSP support on Falcon for sound,music,rendering
- Music support with sample or MIDI-port output
- Ym2149, mv16, st-replay sound output
- VDI graphic output

Absolutely!
Every now and then, it's just hanging when it's supposed to send and load a new data unit. Wait for a few minutes and give it another try and normally it'll work. If it doesn't work after a couple of tries, don't bother - just try again next day instead and I'm sure it'll be ok.

Spin
> to Read them.

You can use any CD-driver software to use the burner as a reader and a version of Metados is included with CDRecorder, so you actually don't have to buy other drivers, like the ones you mention...

>Supports ISO9660 and Red Book formats (?)

Yes - but also "foreign format CD's". That is, you can copy your sampler synth's harddisk to a CDR by using the SCSI-copy function - a great function. You can choose to write in a foolproof ISO9660-format, which is readable on a PC, but you can also write in Atari-format, which allows you to use ALL characters in file- and foldernames.
When you make audio-CD's, you can change the pause between the tracks to any length - individually for every track. You can also insert Indexes, you can insert the ISRC-code for identification and you can choose whether or not to activate the copyprotection bit.

> Doesn't support Re-Writing of RW media.

Since version 2.34b, you press Record with an empty file box and the CDRW will be erased.

> Do these products work with both SCSI and IDE CD drives?

Only SCSI is supported.

> Is 2100 MB too much for the internal IDE controller?

Hi,
It's not too much for the controller - but it's too much for AHDI, which
only supports up to 1GB IDE-disks :(
I'd recommend HDDriver instead.

Unforunately, PCs often cannot read the format of older STs, although
the other way round works fine.

You have the following options:

- Send the disks to someone who own an Atari and have them copy the
files over to DOS disks. This is a 10 minute job that can be done on any
Atari with a 720K drive. It's a shame you didn't do it before selling
your ST.

- Try messing with an emulator such as WinSTon or PaCifiST and a disk
image converter such as MakeDisk. You'll want to convert your disks to
.ST files, and use the emulator to copy the files contained in the .ST
disk images onto your DOS hard drive.

Hi all,
Cubase 2.6 was running fine on my C-LAB Falcon030 (a while ago) but
now locks up when importing .AIF files. MIDI imports and playbacks are OK!
I've tried re-installing from the original disks and in an empty partition
on my Seagate hard drive with no accessories (not even the x-control panel)
nor any auto folder programs. The result is the same (lock-up or crash
when importing or loading an .ALL file with .AIFs).

Any ideas out there???

IDE is such a simple interface that there is no controller at all, just
a few logic chips. Anyway, there is no limit for the capacity of drives
you can connect to the Falcon's IDE or SCSI port. Note, however, that
old drivers might not work. Try the demo version of HDDRIVER:

http://home.nikocity.de/nogfradelt/atari_english.html

HDDRIVER supports IDE and SCSI drives of any size.

From: philipt@dial.pipex.com
Message-ID: <7sqa1r$m1k$1@lure.pipex.net>
Source record: 72940

evnt_multi in TOS 2.06 allows me to wait for the left or right
mouse button (among other events); however I want to respond
to _either_ mouse button.
The documentation says "button is ANDed with mask and tested
for equality with state". If I could change the equality to
"greater-than-or-equal-to" then putting mask=3 and state=1 would
wait for either button; while mask values of 1 & 2 would still
work for single left & right buttons.

Despite several days dubugging inside TOS, I haven't been able
to find the AND and BEQ instructions which do the compares.
Can anyone help?

Unless it uses a standard SCART input, then you'll have to build your
own special cable. I don't know the pinouts for the Commodore video
connector, but chances are you'll find find both connectors here:

http://margo.student.utwente.nl/stefan/hwb/menu_Connector.html#Video

Yes, I am actually.
It's just your attitude to pirating that's annoyed me. I bought MagiCPC a couple of months ago (and thus supported what is already a dwindling software scene on the Atari), and it irks me that someone like you thinks it's perfectly acceptable to pirate something that most other genuine Atari fans would happily pay good money for.

I have to admit, that I didn't think piracy was condoned in this newsgroup at all, but it seems that I am in a minority. If that's the case then I'll keep quiet about it. When companies such as ASH don't bother to create brilliant Atari software anymore because people aren't buying it, then the Atari scene really will be dead and buried.

Oh, and I haven't really forwarded your email to ASH. I don't have their email address, and I really can't be arsed anyway.

You have to add 0xff to the second argument in evnt_multi(). This is
explained in ProGEM by Tim Oren (http://atari.nvg.org/programming/ProGEM/)

From: alannelson@zetnet.co.uk
Message-ID: <37f0f8c7$0$25059@news.zetnet.co.uk>
Source record: 72945

Hi there folks,

I am having a problem sending someone an attached file - his emailer can't decode UUE or MIME (he's using a PC), while the editor I am using (Everest) with my emailer (Newsie 0.94) can't load the file I'm trying to send if I don't encode it first. Everest reports that the lines are too long and truncates them, thus presumably corrupting the file.

Has anyone got any suggestions how I can get this poor chap's file to him before I resort to using snailmail?!

For reference, I'm using an STFM with STiNG, CAB 2.7 and, of course, Newsie.

Cheers

Alan

Just read the docs and your web site text now! It was just that we
downloaded it, plugged in the TV and tried it - we where amazed at how
fast it was (plus you can look up/down!). Shame it's not being developed
anymore. Big shame :-(

> Planned work in pm[doom,heretic,hexen]:
> - DSP support on Falcon for sound,music,rendering

This will be awesome!! Forget the music though (imo) :)

> - Music support with sample or MIDI-port output

Well, the sound fx in v0.14 are superb, crystal clear. But I'd hate to
loose frame rate just for crabby PC music! :-/

> - VDI graphic output

In what way? NVDI should come in then! ;-)

How about having options in PMDoom, like being able to drop certain
textures - like the horizon, floor, ceiling, or even animated objects
like the acid pools, etc..? Just a thought as my Falcon and TT really
struggles with Doom.
But here's my main bug with PMDoom - why does it not use fpu? Apple and
PC users know the benefits of fpu power when it comes to first person
gaming, so why does this not apply to Atari Doom, Patrice? I've got a TT
and a Falcon both with FPU chips, just sitting in there! :-}
There are many (Falcon, not TT) demos that use the fpu...
If this is a dumb question then I'm sorry! ;-)

Thanks for replying, Patrice. PMDoom is superb, thank you!

Steve

Hi,
Do you have only 4MB RAM?
If so, the problem is very well known (at least to me...).
It's due to the fact that your waveforms take up too much RAM and that
makes CAF hang instead of producing an error message. One of all the
bugs that were never fixed... :(
Try loading a song which doesn't contain much audio and see if it works
better.
Also make sure you don't have many .ARR-files loaded, since the midi
info also takes up your precious RAM space...
Two possibilities to solve the problem:
#1: Get more RAM - absolutely the option I'd recommend.
#2: Delete all .WIF files, as those contain the waveform images. As soon
as you start loading one of your songs, you'll have to abort the
creation of waveforms for each audio file that's loaded - and you'll
have to do it every time you load the song in the future too :(-
which is one reason why I recommend the first option instead.
If this isn't the cause, keep in touch and I'll try to think of
something else.

Best regards,
Claes

SoundPools software doesn't need any driver at all, it will find the CDR
(SCSI only) no matter what....It will woprk happily enough with Metados,
and SOundPool distribute a Metados driver set with it to use the CDR drives
as CDROM readers...It doens't currently support CDRW...it does do PQ
encoding for CD-Audio production master creation, which CDWriter doesn't...

If the file is anything but a plain ASCII textfile you _must_ use MIME
or UUE, preferebly the former. Try to mail the file to yourself to
check if Newsie can unpack it.

If it is a ASCII file with very long lines use another editor that can
handle them (I'm using QED) and reformat the text.

Why not use your STFM's colour monitor on the Falcon? There is a simple adapter for the plug available. I have used it without problems, though you can get a lot of flicker in interlace mode - better to select line doubling.

4924. Partitioning and formatting a SCSI disk on an STE

Newsgroup: comp.sys.atari.st
Date: 1999-09-28 00:00:00 UTC
From: Ritchie Swann <ritchie@echoes.demon.co.uk>
Message-ID: <37F13468.FE711E66@echoes.demon.co.uk>
Source record: 72957

Some time ago, I picked up a second hand 520STE, promptly upgraded it to 4MB from spare 30 pin SIMMs lying about all over the place, and picked up a 520MB SCSI disk. I then got hold of a Link 97 adapter which allows me to plug it into the Hard Disk port on my ST. So far, so good.

I tried for ages to get AHDI to recognise the disk, and discovered that the only way to get it to work was to partition and format the disk on my PC using DOS <= 32MB FAT format, upon which I can boot AHDI from a floppy, pick up the hard disk, and carry on.

Now, this is alright for a quick fix but hardly practical as it means all my boot files have to reside on a floppy, which I can live with (having a second floppy drive) but it's still annoying.

I can access the hard disk perfectly well at a logical level, just not a physical level. Attempting to repartition the drive, reformat it or installing AHDI it just tells me to go away.

What's going on? I remember there were problems with STEs and hard drives when the machine
was first released....

I have a simulair problem, I can't write .ALL files to my Seagate HD.
It locks up and seem to make some kind of SCSI error.
So now I save my .ALL files to floppy.
Anybody having an explanation for this strange fenomena?

|evnt_multi in TOS 2.06 allows me to wait for the left or right
|mouse button (among other events); however I want to respond
|to _either_ mouse button.

The following was posted in Ictari Issue 10. I hope no-one minds me copying it here but as you will see from the bottom, it has been re-copied a number of times.

John Logan

Using the right mouse button with evnt_multi
==========

You will probably have noticed that very few applications for the Atari make much use of the right mouse button. The reason given was that there was no simple way for a GEM program to do it. It turns out that there has been a legal way to do it all along - Atari finally got around to documenting it a couple of years ago, but only to registered developers.

evnt_button

Normally a GEM program is based around an evnt_multi call, but for simplicity I will stick to evnt_button, which only waits for a mouse button event. The parameters are much the same but because it only waits for one event, there are rather less of them :)

In C it is

int evnt_button(int maxclicks, int mask, int state,short *x, short *y, short *button, short *kstate) ;

It takes three parameters, maxclicks is the number of clicks to wait for, mask is a bitmap showing which buttons you are interested in (1=left, 2=right, 3=both) and state is a bitmap showing what state to wait for. It returns the number of clicks that occurred, and puts the x and y position of the mouse in x and y, the final button state in button and the shift key state in kstate.

The way it is normally used is to pass one in mask so that it ignores the right button.

Using the right button as a shift key

The desktop and some other applications use the right button to select things in windows that aren't topped. You have to hold the left button down at the same time. To do this, or use the right mouse button as a shift key like this in any other way, you still use one in the mask, but you check button afterwards to see if the right button was down

```
evnt_button( 1, 0x01, 0x01, &x, &y, &button, &kstate ) ;
^ ^
| Wait for left button down
Use left button, ignore right
```

```
if( button & 0x02 )
/* right button down as well */
else
/* left button only */
```

```
Waiting for a right button click
--------------------------------
```

It is also possible to wait for a right button click. For example if you want to wait for the right button, and don't care about the left button,

```
evnt_button( 1, 0x02, 0x02, &x, &y, &button, &kstate ) ;
^ ^
| Wait for right button down
Use right button, ignore left
```

If you want to wait for both buttons to be down, or just the left or just the right, you have to use three for the mask (1+2) and the state to wait for in state.

```
evnt_button( 1, 0x03, 0x02, &x, &y, &button, &kstate ) ;
^ ^
| Wait for right down, left up
Use both buttons
```

```
evnt_button( 1, 0x03, 0x03, &x, &y, &button, &kstate ) ;
^ ^
| Wait for both to be down
Use both buttons
```

```
Waiting for either click
------------------------
```

You will notice that you can only wait for one state. There is no way of saying 'Wait for left or right button click'. At least, not if you believe the documentation! Here's where you get the bit not in textbooks :-

First...

```
A historical note
-----------------
```

A method used by some older programs, and in fact recommended in the Lattice C manual, involves some clever messing around with vectors. You use the VDI call vex_butv() to install a mouse button handler, and what you do is that whatever click you get you pretend it is a left click and set a variable somewhere to show what sort it really is.

Playing around with vectors like this is difficult in C and virtually impossible in basic, but there is a more serious problem with this method. What happens if you are running multitos, and one program tries this? All the other programs will also be affected by your routine and will get all their mouse clicks as left clicks.

So Atari announced to developers the official method that had always worked and no one knew about.

The bit you won't find in your manuals

As well as the maximum number of clicks to wait for, the first parameter to evnt_button has another purpose. If you add 0x100 to it (this is 256 in decimal) it means negate the state requirement. For example if the state is zero, it will wait for the button state not to be zero - ie for either button to be down

```
evnt_button( 0x101, 0x03, 0x00, &x, &y, &button, &kstate ) ;
^ ^ ^
| | Wait for NOT(no buttons down )
| Look at both buttons
Negate state requirement, wait for one click
```

If you are interested in mouse up events, then you have to wait for one of the buttons to be pressed and then either wait for the state to be zero, or wait for it NOT to be whatever it then is.

```
evnt_button( 0x101, 0x03, 0x00, &x, &y, &button, &kstate ) ;
/* Right, now one or the other or both is down */
evnt_button( 0x101, 0x03, button, &x, &y, &button, &kstate ) ;
^
Wait for NOT( previous state )
```

Summary

Using the right button isn't as difficult as it's made out to be. Although all the examples I have done are in C, this should work in any language that lets you call GEM directly, such as Hisoft Basic, GFA Basic 3 or Assembly language (see also ASSEMBLY\EVNT_BUT folder).

The information was originally released by Mike Fulton (Atari developer support). Warwick Allison posted it onto the Usenet newsgroup with some accompanying notes, and then Steve Taylor posted a copy of his message onto Turbonet (where I read it).

I think what you're trying to do is run a TOS/TTP program that just uses text mode, and you can't see the output cause it exits to GEM quickly.

Your best bet is to get a CLI program that will let you run TOS/TTP programs in a shell. There's hundreds of them, have a look at http://sunsite.org.uk/packages/atari/umich/Cli/ for a big list.

That's probably doable timewise (just!). But the financial side of things wouldn't be right. We're a legit business and have to pay various bills (insurance, company registration, accountant etc etc) even before a single magazine gets printed, and sadly the income from magazine sales, and diminishing advertising revenue wouldn't cover these costs TBH :-((

That aside, I'd personally like to see someone take up where AC leaves off!

:-)))

Kind regards

Hi,

Carlos Pitt <armandi@tin.it> wrote in message
news:7stgbo$o38$1@nslave1.tin.it...

> How is possible connect to internet with my Atari 1040 ST ?
> What program I need ?

Various people wiill give you different recommendations, but these would be
my choices:

TCP/IP stack: STinG

Email and news: POPwatch/NEWSwatch (mail and news fetchers respectively),
Okami (offline reader)

WWW: CAB (1.5 is freeware, 2.7 is commercial, but worth it IMHO)

FTP: aFTP

STinG also has clientts for IRC, ICQ etc.

> What resolution use ?

ST-high (640*400 monochrome) if at all possible.

> What modem ? A Trust 14400 modem for PC can be used ?

This will be fine, I used one myself on the ST. Faster modems are no use on
an ST unless you have the serial port hardware modified for greater speeds,
something you might consider later once you've been up and running for a
while.

The above assumes you have a hard drive and a RAM upgrade, if not you should
seriously consider both (take the RAM to the full 4Mb if possible). However,
Tony Cianfaglione has drawn up intructions for setting up web browsing using
a 1040 with a single floppy drive. These are at:

http://www.chebucto.ns.ca/Technology/NSACUG/faq/stfsting.txt

I have a page up with general advice on setting up STinG. It's a little old
now, but most of it should still be OK. It's at:

http://www.whalley.demon.co.uk/atari/texts/stingset.html

You should be able to find the above software via the UTSI:

http://www.ping.be/~ping1030/atari/prg-ind.htm

You may find Okami a little daunting to set up, in which case you can substitute NEWSie instead of the POPwatch/NEWSwatch/Okami combination, though I prefer the latter.

HTH

Well, as you recently discovered there are a fair few people who are hanging
around in here largely thanks to POPwatch and NEWSwatch, so I think it's
fair to say you've done your bit for the Atari community one way or another
:-)

> But I have to say, I'm rather concerned about the lack of support on this.

Probably because Tony Greenwood hasn't been around for a bit!

>your ST.

They don't even have to copy them, just run a suitable conversion program such as DISKMOD.TOS or others whose name I can't recall at present (one was published by Little Green Software), or use a hex editor to change the first three bytes of the boot sector to E9 00 4E or EB 34 90. The latter has the advantage that it doesn't interfere with any boot code that may be present (even though this is unlikely except for games), as the modifier programs write a completely new IBM boot sector. DISKMOD.TOS needs a companion file BLOCK0.DAT that contains the data to be written; one snag is that every disk gets the same serial number, so some machines may not recognise a disk change if two such disks are used in turn.

STinG for your net socket and CAB or Newsie for your browser. On a 1040 you're best to turn off the images. It can take over 3 minutes to format a page even with no images on a stock ST. Newsie also reads news and does email. Check the quickfaq. Flinny's site also has most internet software for downloads.

Medium or high rez. 14400 is fine, but you need a serial port upgrade to exceed 9600.

Ciao
John

> If this is a dumb question then I'm sorry! ;-)

Doom,Heretic,Hexen do not need FPU. All the maths are done with integer values (16,32,64 bits). A FPU is useful only with floating point values (like in Quake). And I do not have a FPU in my Falcon, so I can not test the changes between FPU/no FPU.
If you "grep double src/*.c include/*.h" in the Doom source tree, it will not find any floating point values in the source.
In Quake, all rendering/math are done using floating point ("double" in C language) values. So the FPU is really useful in Quake.

Cheers John! I was starting to feel a bit of an outsider. I know I've been absent for a while from the Atari scene, and there are so many names in here that I don't recognise. Nice to still have friends :-))

> I, too, BOUGHT Magic-PC. As have many others. What's so special about you
> that ripping it off is OK? If you want to use it, BUY IT!

Absolutely! If the day ever comes that people like this guy are in the majority in the Atari scene, then I for one, won't bother supporting it anymore. It's always been a major incentive for me, that the Atari community are by and large an honest bunch of folks, without that 'pirate' element of other platforms!

But I have to say, I'm rather concerned about the lack of support on this. Not so long ago, loads of people would have jumped on this guy and told him where to get off. But it seems a bit quiet now.

Gary

Nonsense, I was too busy making arrangements to buy my Falcon and
searching for good deals on a copy of MagiC! :) 'tis quite a contrast
to be thinking about buying MagiC (which does *not* cheap after blowing
a paycheque on a Falcon) and then coming to c.s.a.st and reading
this...

All it takes is one person to permeate the strong vicious circle that
we find the professional Atari software development community in... if
one goes, others will follow. Although it may looks bleak, I'm buying
MagiC anyway...

Cheers (or not),
Derek

Note that it's not HDDRIVER that is responsible for limits regarding the
partition size but it's TOS. For partitions > 512 MByte TOS 4.0 is
required (or Big-DOS, MiNT, MagiC). To create a partition > 512 MByte
simply enter the partition size in the dialog windows, like for any
other partition size. In case this doesn't work I suggest you send me an
e-mail with a detailed problem description. Please provide your
HDDRIVER's serial number with your mail.

Yes, that's the way it's supposed to be. Regarding IDE drives > 8 GByte
current versions of HDDRIVER (like yours) are required since support for
the LBA addressing mode is required for these drives. SCSI drives are
not affected since SCSI, as a more professional standard, fortunately
doesn't have the design flaws IDE has.

AHDI might be the problem. It's old and doesn't support all the SCSI
hardware you can connect to the Atari. Current driver software should
better fit your needs, e. g. HDDRIVER:

From: publish@cix.co.uk
Message-ID: <LwpI3.260$Eu.4896@wards>
Source record: 72979

```
THE CONTACT FILE
----------------

Hi all

As most people here know Atari Computing will be closing after issue 16 is
published later this year. However, in the final issue we would like to
feature a mega huge Contact File in which we will list all the remaining
Atari dealers worldwide, remaining bulletin boards, Atari users clubs,
Atari-related magazines and fanzines etc etc.

But in order to make this File as good as it can be we need your help.
Therefore if you are an Atari dealer, are involved in or administer an
Atari club or publication, run a BBS etc etc then please let us know the
details. You can email me (as in sig file) or email me at:
mike@ataricomputing.com, or write to the usual magazine editorial address
(see page 4 in any recent issue).

We're currently working on AC#15 and that will shortly be printed. However
AC#16 won't be far behind, and we need to get The Contact File ready to
roll by mid-October, so please get in touch with us as soon as possible if
you want your club, magazine, BBS, Atari business and mailing list
included.

With your help we can make The Contact File a very useful reference for all
Atari users, not just those online!

Many thanks for your help and co-operation. You don't even need to be an AC
reader to help us!

The deadline for entries into the File will be 14 October, so don't delay
please!

:-)

Kind regards

Mike Kerslake

Mike Kerslake a ï¿½crit :
>
> THE CONTACT FILE
> ----------------

This is a great idea. Such a great idea that actually I had it a few
years back, but never got down to doing it.

What I would like to suggest is, once you have this great big file, to
make it available in some form on the web. This won't hurt any sales for
AC, since you are quitting, and would be a great service to the
community. Heck, I guess someone could even volunteer to maintain it!

> this?

Patrice's own. Doom v0.80 is for RGB Falcon's and uses the dsp - it's
fast and you can look up/down too! ;) However, you cannot play the game
proper as the enemies don't move...
PMDoom v0.14 is the latest version and you can play this. It's slow
though and even my TT cannot display decent frame rates. Sound quality
is tops though.

> In Quake, all rendering/math are done using floating point
> ("double" in C language) values. So the FPU is really useful in Quake.

Suppose that just goes to show how much I know about coding! :)
Still a shame that the fpu chip is sitting here all nice and cool. Why
not treat your Falcon, Patrice, and get an fpu? :)

I've never managed a successful download of your Quake app. I'll try
tonight though - so does your version use the fpu or not? (if it doesn't
I'd hate to try and imagine the frame rates)

Thanks for the reply - informitive, but wasted on me! ;-)

> Do these products work with both SCSI and IDE CD drives?

IIRC there are some IDE-writers on the compatibility-list in the latest
version of CD-Recorder. If you look at Soundpool's CD-Recorder-info at
their homepage (http://home.t-online.de/home/sound_pool/cdr2_me.htm)
you'll also see that they say "IDE/ATAPI writers and SCSI writers are
supported".

4980. HD Driver for Mega STe

Newsgroup: comp.sys.atari.st
Date: 1999-09-30 00:00:00 UTC
From: mherzig@indiana.edu
Message-ID: <mherzig-3009992342030001@dial-126-29.dial.indiana.edu>
Source record: 72797

Hi

I have a Mega STe 4. An old 44MB Syquest hooked up to it. Works fine but I still use the Hard Disk Drivers that came with my old Supra Drive - Supra HD Utilities. During a recent HD problem I thought it might be good to find a replacement for the Supra Driver. I only have two floppies with it and they are old and can't be copied...

My Syquest came with ICD software (5.4) but it refuses to talk to anything else but an ICD host adapter. The Syquest has one but of course not the Mega Ste.

Anyway, my question is: Is there any HD driver software someone can recommend (preferrably free or very inexpensive)? I have long upgraded to two PowerMacs but still use some of the ST software and would like to keep my ST setup running smoothly.

Any ideas?

Thanks,

Peter

> How is possible connect to internet with my Atari 1040 ST ?

This is in the Quick FAQ. Yes, you can do it, but more RAM and a hard drive are strongly recommended

> What program I need ?

STinG as a TCP/IP package, and then, depending on what you want to do, CAB for WWW, Newsie or Okami or whatever for email/news, etc...

> What resolution use ?

High res. I wouldn't want to surf the web in 4 colours/mid res, and even less in low res!

> What modem ? A Trust 14400 modem for PC can be used ?

Yes, shouldn't be a problem. More that 14400 on an ST is wasted because the serial port is limited to 19600.

You'll find the Quick FAQ at http://bales.online.fr/atari

>advice on what size partition I would need to reserve for Mint too. (Space
>is not likely to be a problem once I get this 4.1 gig Barracuda installed.)

My C: partition is 84megs (the Falcon's internal IDE is drive C:)

My 4.29 gig Seagate Barracuda drive is divided up into various size partitions D: through M: (with partitions K: and L: being around 800MB each for use with Cubase Audio recording). My SyQuest EZ230 is N:, my CD ROM is O:.

I use MagiC 5, and with all the AUTO folder, ACC and mutitasking stuff, my C: partition is about 1/2 full.

>Finally; what about backups ?

I have several SyQuest 230 carts for backup purposes, and use Diamond Back 3 at least a couple times a month. Once I get my CDrw drive, I'll probably put everything on CD.

>In what way? NVDI should come in then! ;-)

I added this to PM-DOOM a couple of days ago and Patrice should have the
code by now.
On my machine (Falcon+AB040+Eclipse/RageII) it works fine in 8 bit and
16 bit mode. The 8 bit mode is significantly faster (quite playable),
though.

The code simply uses vs_color to set the palette (in 8 bit mode) and
vro_cpyfm to copy the data to the screen, so it should work with any
graphics card that has the same pixel format for the vro_cpyfm function.
I don't expect any card to have problems with the 8 bit mode, but I'm not
sure about 16 bit.
NVDI won't make any difference since it passes vro_cpyfm calls through
to the card specific VDI (such as the NOVA VDI).

Naturally, a generic VDI version can't do real double buffering (the next
image is built in normal memory and then blitted to the screen), but at
least on my machine it still looks good. New functions will be added to
fVDI/RageII to deal with this and to support some form of hardware
scaling (a 320x200 image is rather small on an 1152x864 display...).

One problem with the VDI version remains (on my machine at least):
It hangs whenever I try to exit the program...

Single TOS here. STfax reports the right driver (22) is an unknown
device, loads it, says it is printing, does nothing, forever.
Yes, I can print an IMG file at least six other ways. NVDI is fine,
printing from CAB, so there is nothing mysterious in my boot order.
Caches are big enough, too. Plenty of memory, 128 Megs TT, 10 ST.

Thanks, all.

Well, with NVDI (or the standalone "Enhancer") this should be possible
using offscreen-bitmaps.

Ciao

>Well, with NVDI (or the standalone "Enhancer") this should be possible
>using offscreen-bitmaps.

Normal off-screen bitmaps are not stored in the memory on the graphics
card, but in normal RAM. They are really only useful when you have VDI
calls that you want to do 'in the background' before blitting the
result to the screen.

What's needed is on-card off-screen buffers, which could then be written
to using the normal hardware accelerated routines (or using direct memory
accesses, if necessary, for something like DOOM). Support for changing
the actual frame buffer address on the card might also be nice, but I
think the hardware accelerated blits should normally be fast enough for
double buffering (modern cards may even give you free scaling).
This has to be done by the VDI that actually knows about the hardware, so
it would be impossible using NVDI on top of the NOVA VDI, for example.
NOVA VDI itself would have to take care of it.

fVDI _will_ have things like this in the future, but naturally only
for cards where drivers are available (currently only Eclipse/RageII,
but the same code should run on mach64 NOVAs with minor changes and
on other Rage variants, such as the RagePRO, without too much work).

Mhmm, I don't have the specs handy, but wouldn't it be possible to also
allow them in the memory of the card, as long as it's visible in the
address space of the CPU?

Ciao

Thomas

On the Falcon (14mb ST Ram) I get this problem -
Upon launching the TTP the screen clears and displays some text, but two
bombs appear just after "host_init" is displayed.

On the TT (2mb ST Ram, 4mb Fast Ram) I get an error message but the TTP
program bombs out to quick to read it. I think it is reporting that
there is only 1.7mb ram detected... (fast load flags are set)

> The engines must be in the same directory as the normal version:
> ./quake.exe (pc for example)
> ./quake.ttp (atari engine)
> ./id1/*.pak (game files)

So how does this work for MacQuake then? I've copied over the
application from the iMac (but this ain't PC code...!)

If all I need is the PC exe file, then any ideas where I can find this?

Thanks
Steve

5003. Tos 3.01

Newsgroup: comp.sys.atari.st
Date: 1999-09-30 00:00:00 UTC
From: Jeroen Brand <jbrand@casema.net>
Message-ID: <37F3A3D8.A8223B56@casema.net>
Source record: 72882

Hi,

Could anybody tell me the difference between Tos3.01 and Tos 3.06.
Are there many errors in 3.01?
Is 3.06 still available?

The main reason I ask this is because I had some serious trouble
installing some HD's.
- one is 730MB AV disk (fixed sector=512byte)
..this is not gonna work on a TT, I know.
Tos 3 can only oparate with 8Kb sectors on large partitions.
- the other is a Conner 540MB
The TT claims there are bad sectors, but I doubt it.

I can add a Fujitsu MOD (540MB) to my current drive (48MB) on that
driver.
But if I swap the 48MB disk for a bigger one I can't get the driver on
the disk.
All kind of crazy symbols in my window message '(3#3*))556 bytes used in
45 items'

Greetings,

Olaf

Hello all again,
I'm reposting this in case someone who knows what's going on with Cubase
locking up (and or crashing) missed the first post.
I've been running Cubase 2.6 (leagally baught with key and DSP plugs)
for a good while. I stopped for a bit and found now my Falcon crashes only
when importing an AIF file (through Pool or embedded in an .ALL file).
I've re-installed all on an empty partition with no Auto folder or CPX's
with the same results.
Any ideas?
John

5011. Spin CD driver

Newsgroup: comp.sys.atari.st
Date: 1999-09-30 00:00:00 UTC
From: macgamer@ukonline.co.uk
Message-ID: <1dyypef.16gorzp1lh4qaqN@tnt-10-85.easynet.co.uk>
Source record: 72890

Hi, can someone give me a little help trying to set up Spin to work on my TT with a Lacie/Teac 12x CDR drive? (as a reader only of course)

I've downloaded the latest version and the english docs too, but am still struggling. I've configured the Config.sys file correctly but it still cannot see the drive.

Config.sys =

*BOS, C:\AUTO\SPIN_SD.BOS, A=14
*DOS, C:\AUTO\ISO9660F.DOS, Z=A

I have SPIN.XFS & CONFIG.SYS & METADOS.PRG & the two drivers mentioned above all inside the AUTO folder.

I've got it on SCSI ID of 6. (SCSI ID 5 is taken up by the ZIP, and the CD is next in the chain). But I've tested all this with ZIP on the SCSI chain and also without. Neither works.

All I seem to get is device not responding... The set up works perfectly under Extendos Pro, but because I want to access Macintosh CDs I need Spin. Anyway, does anyone know what's going on here? I'm pulling my hair out - I guess it's either something real dumb or perhaps Spin is incompatible with my drive. <?>

Thanks
Steve

Source record: 72891

You've lost me.

I downloaded PM-Doom a couple of days before I picked up this thread
and have been trying to get it running on my Milan with Patrice's
help.

At the moment the PM-DOOM start-up looks like this:

```
Atari DOOM port by Patrice Mandin v 0.13 5 / IX / 1999
based on Linuxxdoom-1.10
DOOM Shareware Startup v1.10

I_AllocateScreensAtStart: Reserve memory for screens.
Reading hardware configuration...
Machine : unknown
Video : unknown
Sound : YM 2149, Xbios DMA functions, OK
Joypads : off
M_LoadDefaults: Load system defaults.
Z_Init: Init zone memory allocation daemon.
8192 Kbytes allocated for zone
W_Init: Init WADfiles.
adding ./doom1.wad
===========================================================================
Shareware!
===========================================================================
M_Init: Init miscellaneous info.
R_Init: Init DOOM refresh daemon - [...................]
P_Init: Init Playloop state.
I_Init: Setting up machine state.
I_InitSound: pre-cached all sound data
I_InitSound: sound module ready
D_CheckNetGame: Checking network game status.
startskill 2 deathmatch: 0 startmap: 1 startepisode: 1
player 1 of 1 (1 nodes)
S_Init: Setting up sound.
S_Init: default sfx volume 8
HU_Init: Setting up heads up display.
Error: You need a TT or a Falcon video chip
```

So it doesn't like my "standard" graphics card. Has anyone got this
working on the Milan. It would be excellent to have a real game
available on this machine.

Once again, thanks Patrice.

Theoretically, yes, but as I said earlier this is something that must
be done on the hardware level to be of any use. The enhancer has no
way of handling that, and NVDI could only do it for the cards it
supports natively.

Speaking of off-screen bitmaps, by the way, does anyone know of a
program that uses anything except monochrome ones?
It seems you can open an OSB with just about any kind of pixel layout
using the latest NVDI, but why would anyone want to? One in the same
format as the current screen might possibly be useful, but I've never
seen that done either.
The reason I'm asking is that I want to know how much OSB functionality
I need to implement in fVDI.

Back then there probably wasn't a VDI version anywhere.
Even now my hard drive may contain the only one (but Patrice may have
built one himself by now, I guess).

I'd expect the next version to run on your machine. If it's OK by
Patrice, I could make mine (based on v0.13) available in the mean time,
though. I'm reasonably sure it would work in 8 bit mode on the Milan.

Thanks Derryck.I will go and download Ghostscript as soon as I feel a
bit better.I have found that a few websites I have visited have docs
in *.PDF format...hopefully I should be able to read them with
Ghostscript.

Gordy.
